

CONTENTS

PART 1 BASIC KNOWLEDGE AND PRACTICES	PART 2 THEORIES	
Chapter 1	Effect of Wastes on Streams and Waste-Water Treatment Plants	3
1.1	Effects on streams	3
1.2	Effects on sewage plants	7
1.3	Differences between industrial and municipal wastes	9
Chapter 2	Stream Protection Measures	12
2.1	Standards of stream quality	12
2.2	Stream quality control	16
2.3	Effluent guidelines	26
Chapter 3	Computation of Organic Waste Loads on Streams	47
3.1	Streeter-Phelps formulations	47
3.2	Thomas method for determining pollution-load capacity of streams	50
3.3	Churchill method of multiple linear correlation	58
Chapter 4	Stream Sampling	64
Chapter 5	Economics of Waste Treatment	69
5.1	Benefits of pollution abatement	71
5.2	Measurement of benefits	72
5.3	A proposed method for resource allocation	72
5.4	Costs of waste treatment	81
Chapter 6	Volume Reduction	89
6.1	Classification of wastes	89
6.2	Conservation of wastewater	89
6.3	Changing production to decrease wastes	90
6.4	Reusing both industrial and municipal effluents for raw water supplies	90
6.5	Elimination of batch or slug discharges of process wastes	93
Chapter 7	Strength Reduction	96
7.1	Process changes	96
7.2	Equipment modifications	97
7.3	Segregation of wastes	97
7.4	Equalization of wastes	98
7.5	By-product recovery	98
7.6	Proportioning wastes	100
7.7	Monitoring waste streams	100
7.8	Accidental spills	100
Chapter 8	Neutralization	102
8.1	Mixing wastes	102
8.2	Limestone treatment for acid wastes	103
8.3	Lime-slurry treatment for acid wastes	103
8.4	Caustic-soda treatment for acid wastes	103
8.5	Using waste boiler-flue gas	105
8.6	Carbon-dioxide treatment for alkaline wastes	105
8.7	Producing carbon dioxide in alkaline wastes	105

8.8	Sulfuric-acid treatment for alkaline wastes	106	13.10	Anaerobic digestion	154
8.9	Acid-waste utilization in industrial process	106	13.11	Mechanical aeration system	155
Chapter 9	Equalization and Proportioning	108	13.12	Well injection	156
9.1	Equalization	108	13.13	Foam phase separation	160
9.2	Proportioning	109	13.14	Brush aeration	161
Chapter 10	Removal of Suspended Solids	113	13.15	Subsurface disposal	161
10.1	Sedimentation	113	13.16	The bio-disc system	162
10.2	Flotation	117	13.17	Collection and reclamation (scavenging)	163
10.3	Screening	123	13.18	Miscellaneous (Ozonization, Photolysis, pure oxygen)	164
Chapter 11	Removal of Colloidal Solids	128	Chapter 14	Treatment and Disposal of Sludge Solids	169
11.1	Characteristics of colloids	128	14.	Anaerobic and aerobic digestion	169
11.2	Chemical coagulation	129	14.2	Vacuum filtration	171
11.3	Coagulation by neutralization of the electrical charges	129	14.3	Elutriation	172
11.4	Removal of colloids by adsorption	132	14.4	Drying beds	172
Chapter 12	Removal of Inorganic Dissolved Solids	134	14.5	Sludge lagooning	175
12.1	Evaporation	134	14.6	The wet combustion process	175
12.2	Dialysis	135	14.7	Atomized suspension	177
12.3	Ion exchange	136	14.8	Drying and incineration	177
12.4	Algae	137	14.9	Centrifuging	178
12.5	Reverse osmosis	139	14.10	Sludge barging	181
12.6	Miscellaneous methods	139	14.11	Sanitary landfill	181
12.7	Refractories	139	14.12	Sludge pumping	181
Chapter 13	Removal of Organic Dissolved Solids	142	14.13	Miscellaneous methods	182
13.1	Lagooning	142	PART 3 APPLICATIONS		
13.2	Activated-sludge treatment	145	Chapter 15	Joint Treatment of Raw Industrial Wastes with Domestic Sewage	189
13.3	Modified aeration	146		Introduction	189
13.4	Dispersed-growth aeration	147		A.1 Precedent	189
13.5	Contact stabilization	148		A.2 Social relationship of industry and municipal officials	191
13.6	High-rate aerobic treatment	150		A.3 Political compatibility of industry and municipality	191
13.7	Trickling filtration	151		A.4 Sewer service charge	191
13.8	Spray irrigation	154		A.5 Location of industry	191
13.9	Wet combustion	154			

CONTENTS

A.6	Competence of municipal plant operator	191	16.2	Reducing the incoming load	233
A.7	Permanence of industrial production	192	16.3	Reevaluation of present plant and suggestions for additions	
B.1	Type of municipal sewage treatment	192	Chapter 17	Discharge of Completely Treated Wastes to Municipal Sewer Systems	237
B.2	Characteristics of industrial waste	192	17.1	The sampling program	238
B.3	Receiving-stream water quality	193	17.2	Analyses of wastes	238
B.4	Volume ratio of industrial to municipal wastes	193	17.3	Plant-production study	239
B.5	Economics of alternatives	193	17.4	Suggested in-plant changes to reduce waste	239
15.	Industrial use of municipal sewage plants	194	17.5	City-wastewater treatment plant	243
15.2	Municipal ordinances	196	17.6	Toxic limits for metals	244
15.3	Sewer-rental charges	200	17.7	Treatment of industrial wastes	245
15.4	Existing situation	204	Chapter 18	Close Plant Because of Economic Burden of Waste Treatment	251
15.5	Stream survey	205	18.1	History of problem	251
15.6	Composite waste sampling	213	18.2	Waste character and treatment	
15.7	Composite waste analyses	214	18.3	Preliminary and primary treatment	
15.8	Laboratory pilot-plant studies	216	18.4	Existing treatment plant efficiency	253
15.9	Literature survey	219	18.5	Cattaraugus Creek pollution situation	
15.10	Conclusions from study	220	18.6	Corporate relationship in the community	255
15.11	Overall planning study conclusions	221	18.7	In-plant studies	256
15.12	Solids handling	226	18.8	Biodegradability of glue-plant wastes	260
15.13	Final design of the Gloversville-Johnstown joint sewage treatment plant	227	18.9	Pilot-plant experimental data	260
15.14	Estimated costs and financing	229	18.10	Preliminary design	261
15.15	Application of the plan in practice	230	18.11	Final decision	262
Chapter 16	Joint Treatment of Partially Treated Industrial Wastes and Domestic Sewage	232	Chapter 19	Discharge of Partially Treated Industrial Waste Directly to Streams	
16.	Ascertaining present plant capacity	233	19.1	Procedure	
			19.2	River studies	

19.3	Pilot-plant results	268	22.7	Treatment of laundry wastes	350
19.4	Substitution of soluble sizing	271			
Chapter 20	Discharge of Completely Treated Wastes to Streams or Land	276	Chapter 23	Food-processing Industries (AGRO-based)	356
20.1	A problem	276	23	Introduction	356
20.2	Stream studies	278		<i>Cannery Wastes</i>	
20.3	State decision	278	23.2	Origin of cannery wastes	357
20.4	Poultry-waste characteristics	279	23.3	Characteristics of cannery wastes	357
20.5	The solution	281	23.4	Treatment of cannery wastes	359
20.6	Results	283		<i>Dairy Wastes</i>	
20.7	Another example	288	23.5	Origin and characteristics of dairy wastes	378
Chapter 21	Site Selection	295	23.6	Treatment of dairy wastes	379
21.1	Evaluation on cost-of-product basis	295		<i>Brewery, Distillery, Winery, and Pharmaceutical Wastes</i>	
21.2	Tangible and intangible factors	295	23.7	Origin of brewery, distillery, winery, and pharmaceutical wastes	392
21.3	The importance of long-term planning	297	23.8	Characteristics of brewery, distillery, winery, and pharmaceutical wastes	393
21.4	Waste disposal as a critical factor	298	23.9	Treatment of brewery, distillery, winery, and pharmaceutical wastes	395
21.5	Water supply as a critical factor	300		<i>Meat-packing, Rendering, and Poultry-plant wastes</i>	
21.6	Site selection for atomic-energy plants	301	23.10	Origin and characteristics of meat-packing wastes	404
			23.11	Treatment of meat-packing wastes	407
PART 4	MAJOR INDUSTRIAL WASTES		23.12	Feedlot wastes	412
Chapter 22	The Apparel Industries	310		<i>Beet-sugar Wastes</i>	
	<i>Textile Wastes</i>		23.13	Origin and characteristics of beet-sugar wastes	416
22.1	Origin and characteristics of textile wastes	310	23.14	Treatment of beet-sugar wastes	417
22.2	Treatment of textile wastes	313		<i>Miscellaneous Food-processing Wastes</i>	
22.3	Final waste treatment	320	23.15	Cane sugar wastes	418
	<i>Tannery Wastes</i>		23.16	Coffee wastes	423
22.4	Origin and characteristics of tannery wastes	334			
22.5	Treatment of tannery wastes	336			
	<i>Laundry Wastes</i>				
22.6	Origin and characteristics of laundry wastes	349			

23.17	Rice wastes	426	Chapter 25	Chemical Industries	575
23.18	Fish wastes	427	25.1	Acid wastes	575
23.19	Pickle and olive wastes	429	25.2	Cornstarch-industry wastes	580
23.20	Soft-drink bottling wastes	430	25.3	Phosphate-industry wastes	583
23.21	Bakery wastes	431	25.4	Soap- and detergent-industry wastes	588
23.22	Water-treatment-plant wastes	431	25.5	Explosives-industry wastes	593
	Agricultural wastes	434	25.6	Formaldehyde wastes	598
			25.7	Pesticide wastes	599
			25.8	Plastic and resin wastes	602
			25.9	Fertilizer industry wastes	610
Chapter 24	The Materials Industries	439	25.10	Toxic chemicals	615
	<i>Wood Fiber Industries</i>		25.11	Mortuary science wastes	616
24.1	Pulp- and paper-mill wastes	439	25.12	Hospital and laboratory wastes	618
24.2	Builders paper and roofing felt manufacturing wastes	480	25.13	Polychlorinated biphenyls	618
	Photographic wastes	480	Chapter 26	Energy Industries	624
	<i>Metal Industries</i>		26.1	Steam power plants	624
24.4	Steel-mill wastes	482	26.2	Scrubber wastes	635
24.5	Other metal-plant wastes	498	26.3	The coal industry	636
24.6	Metal-plating wastes	503	Chapter 27	Radioactive Wastes	662
24.7	Motor industry wastes	524	27.1	Origin of wastes	663
24.8	Iron-foundry wastes	527	27.2	Nuclear power-plant wastes	663
	<i>Liquid Materials Industries</i>		27.3	Fuel-processing wastes	666
24.9	Oil-field and refinery wastes	529	27.4	Treatment of radioactive wastes	670
24.10	Petrochemicals	549	27.5	Cost of radioactive-waste treatment	690
24.11	Fuel and lub oil wastes	551	Chapter 28	Non-point Source Pollution	722
24.12	Rubber wastes	552	28.1	Introduction	722
24.13	Glass-industry wastes	559	28.2	Land non-point wastes	722
24.14	Metal container wastes	559	28.3	Urban non-point street wastes	724
24.15	Naval-stores wastes	562	28.4	Leachate from landfill sites	725
	<i>Special-Materials Industries</i>		Appendix A	National Standards of Performance	729
24.16	Animal-glue manufacturing wastes	565	Appendix B	National Pollutant Discharge Elimination System (NPDES)	732
24.17	Wood-preservation wastes	566		Index	735
24.18	Candle-manufacturing wastes	568			
24.19	Plywood-plant glue wastes	568			
24.20	Cement industry	569			
24.21	Wood furniture and fixture manufacturing	571			
24.22	Asbestos wastes	571			
24.23	Paint and printing ink wastes	572
