Contents

Chapter I. Introduction 1
by K. H. Mancy

Chemical Analysis for Water Pollution Control . . 1
What Is Unique About Water Analysis? 2
What Are the Responsibilities of the Water Analyst? 3
Instrumental and Automated Analyses 3

Chapter II. Design of Measurement Systems 7
by K. H. Mancy

Objectives of Analysis 7
Parameters for Analysis 11
Methods of Analysis 16
Intensive Versus Extensive Measurement 18
Primary and Secondary System Characteristics . . 21
Primary sensor characteristics 21
Secondary sensor characteristics 24
References 24

Chapter III. Design of Sampling Programs 27
by H. E. Allen

Sampling Programs 27
Sample Collection 29
Sample Preservation 30
Corollary Field Data 31
References 31

Chapter IV. Concentration and Separation Techniques 33
by J.B. Andelman and R.F. Christman

Introduction 33
Carbon Adsorption 35
Freeze Concentration 37
Liquid-Liquid Extraction 38
Principles 39
Applications 41
Ion Exchange 43
Ion Exchange Equilibria and Kinetics 43
Column Operation 45
Applications 46
Chromatography 50
General principles 50
Gas-Liquid chromatography 52
Separation Process 52
Columns 52
Sample Introduction 55
Carrier Gas 55
Detectors 55
Thermal conductivity detection 56
Flame ionization detection 56
Electron capture detection 57
Microcoulometric detection 57
Data Interpretation 57
Thin-Layer Chromatography 58
Other Techniques 59
References 60

Chapter V. Elements of Instrumental Analysis . . . 63
by K.H. Mancy

Chemical Spectrophotometry - General 63
Molecular Absorption Spectrophotometry 65
Molecular Fluorescence Spectrophotometry 70
Atomic Absorption Spectrophotometry 75
Atomic Fluorescence Spectrophotometry 77
Infrared Absorption Spectrophotometry 80
Ultraviolet Absorption Spectrophotometry 88
Electrochemical Analysis 91
Methods based on passage of faradaic current . 92
Measurement of Current-Potential Curves 101
Methods based on electrodes at equilibrium . . 105
Methods in which faradaic current
is unimportant 107
References 110
Selected Supplementary References 113

Chapter VI. Continuous Monitoring Systems 115
by H.E. Allen

Systems Not Requiring Reagent Additions 115
Systems Requiring Addition of Reagents 117
Data Collection 118
Sensors 121
Analysis and Control of Biological Processes . . 127
References 132

Chapter VII. Automated Chemical Analyses 135
by H.E. Allen

System Design 135
Automation of Manual Procedures 145
Response Characteristics of Flow Systems 150
Analytical Methods 154
Ammonia 154
Chloride 155
Chemical oxygen demand (COD) 156
Iron 156
Nitrite 157
Nitrate 157
Kjeldahl nitrogen 158
Manganese 158
Phosphate 158
Silica 160
Other analyses 160
References 160

Chapter VIII. Remote Optical Sensing Techniques . . 165
by C.T. Wezernak and F.C. Polcyn

Introduction 165
General Considerations 167
Scattering 167
Fluorescence 171
Infrared 174
Instrumentation 176
Multispectral sensor system 177
Fraunhofer line discriminator 179
Barringer correlation spectrometer 180
Selected Examples of Data Acquisition Using the Multispectral Scanner 181
Temperature Analysis 182
Effluent Outfalls 187
Oil Pollution 187
Industrial Effluents 191
Conclusions 200
References 202

Chapter IX. Physical Characteristics 205
by K.H. Mancy

Density and Viscosity 205
Temperature 206
Electrical Conductance 208
Electrical conductivity 208
Turbidity 210
References 212

Chapter X. Analysis for Organic Pollutants 215
by R.F. Christman

Nonspecific Analysis 215
Separation and Identification of
Organic Pollutants 218
Application of GLC to pesticide analysis . . . 218
Application of GLC to phenol analysis 219
Application of GLC to volatile acid and
digester gas analysis 222
Application of TLC to phenol analysis 222
Plate preparation 223
Application of sample 223
Development 223
Developing chamber 223
Solvent systems 224
Detection 224
Drying 224
Fluorescence 224
Chromogenic reagents 224
Ultraviolet and Infrared Identification of
Organic Pollutants 224
Identification of pesticides 226
Identification of phenols 226
References 228

Chapter XI. Analysis for Metal Pollutants 231
by J.B. Andelman

Physicochemical Characteristics of Metal Ions
in Aquatic Environments 231
Molecular Absorption Photometry and Colorimetry . 234
Atomic Absorption Spectrophotometry 237
Other Flame Techniques 239
Emission Spectroscopy 240
Neutron Activation Analysis 241
Ion Selective Electrodes 241
Polarography 243
Anodic Stripping Voltammetry 244
References 248

Chapter XII. Analysis for Inorganic Anions 251
by K.H. Mancy

Separation Techniques 251
Spectrophotometric Techniques 251
Electrochemical Techniques 252
Nitrogen Compounds 255
Phosphorus Compounds 258
References 258

Chapter XIII. Dissolved Gases 261
by K.H. Mancy

Separation Techniques 261
Dissolved Oxygen 262
Physicochemical properties of dissolved oxygen 262
Instrumentation modifications of Winkler test 264
Coulometric titration 265
Gas exchange methods 267
Gas exchange unit 267
Oxygen-detecting units 269
Gas chromatographic methods 273
Radiometric method 275
Conductometric methods 276
Voltammetric methods 278
Voltammetric membrane electrode 279
Sensitivity 285
Temperature coefficient 286
Application 289
References 294

Chapter XIV. Analysis of Data 299
by R. Deininger

Curve Fitting 300
Example 1 301
Example 2 305
Example 3 306
Use of Probability Paper 309
Example 4 310
Example 5 313
Tests for Statistical Significance 315
Reliability of Statistical Results 318
References 318
