Preface

vii

<b>1. Brief History of Ion Exchange and the Industrial Needs That Led to Demineralization</b>	
Text	1
References	5
<b>2. Survey of the Impurities in Water, Their Harmful Effects in Industry, and Methods of Removing Them</b>	
I. Water Supplies	8
II. Impurities in Water	9
III. Forms of Water Analysis	11
IV. Units of Measurement	13
V. Harmful Effects of Water Impurities in Industry	15
VI. Water-Quality Tolerances for Various Applications	15
VII. General Methods of Removing Impurities	19
References	22
<b>3. Removal of the Major Ionic Dissolved Impurities in Water</b>	
I. Removal of Calcium and Magnesium: Water-Softening	23
II. Removal of Calcium, Magnesium, Sodium, and Potassium: Hydrogen Cation Exchange	43
III. Removal of Iron and Manganese	47
IV. Removal of Alkalinity	53
V. Removal of Sulfate, Chloride, Nitrate, and Phosphate	56
VI. Removal of Silica	56
VII. Comparison of Water Treatments	66
References	66

#### 4. Removal of Nonionic Suspended and Colloidal Impurities

I. Removal of Turbidity by Filtration without Presettling	68
II. Removal of Turbidity, Color, Organic Matter, Microorganisms, Bacteria, Colloidal Silica, and Oil, by Coagulation, Settling, and Filtration	78
III. Removal of Organic Matter	98
IV. Removal of Colloidal Silica	101
V. Removal of Oil from Surface Waters and Condensates	104
VI. Removal of Corrosion Products from Condensates	105
References	106

#### 5. Removal of Gaseous Impurities

I. Laws of Gas Behavior	109
II. Other Factors in Gas Solubility	110
III. Application of the Laws and Other Factors	110
IV. Removal of Carbon Dioxide	110
V. Removal of Hydrogen Sulfide, Methane, and Ammonia	121
VI. Removal of Oxygen	123
VII. Removal of Chlorine	129
References	129

#### 6. The Demineralization Process and Systems

I. Nature of Ion Exchange and Exchange Materials	131
II. Ion Exchange Equilibria	137
III. Strong-Acid Hydrogen Cation Exchangers	139
IV. Weak-Acid Hydrogen Cation Exchangers	139
V. Weak-Base Anion Exchangers	140
VI. Strong-Base Anion Exchangers	141
VII. Exchange Techniques	142
VIII. Regeneration Phase	143
IX. Ion Leakage and Endpoints of Exhaustion Phase	149
X. Ten Major Demineralizer Systems	161
XI. Summary of Applications of the Ten Major Demineralizer Systems	167
XII. Three-Bed and Mixed-Bed System	169
References	170

#### 7. The Major American Ion Exchange Materials

I. Cation Exchangers	172
II. Anion Exchangers	185
References	195

#### 8. Demineralizer Equipment Designs

I. The Shell	197
II. Subfill under Exchange Materials	197
III. Internal Distributors and Collectors	199

IV. External Valves and Piping	201
V. Regeneration Systems	207
VI. Instrumentation for Monitoring Performance	214
VII. Automatic Control Devices and Panel	216
VIII. Neutralizers of Regeneration Waste Waters	219
References	224

## 9. Demineralizer Technical Design Calculations and Typical Examples

I. Normal Procedure and Steps to Be Followed	226
II. Typical Examples of Design Calculations	230

## 10. Condensate Purification for High-Pressure Utility and Industrial Boilers

I. Turbine and Boiler Deposits before Advent of Condensate Demineralization	261
II. Advent of Once-Through Drumless Boilers and Condensate Demineralizers	263
III. Condensate-Purification Equipment at the Philo Station	266
IV. Prefilter Design	267
V. Development of High-Rate Mixed-Bed Condensate Demineralizers	272
VI. External Regeneration System	273
VII. Omission of Prefilters	279
VIII. Condensate-Demineralizer Design	280
IX. Ammoniation of Cation Resin	287
X. Condensate-Purification for Industrial High-Pressure Boilers	289
XI. Ammoniated Cation Resin for Removing Iron from Utility High-Pressure Heater Drains	290
XII. Disposable, Nonregenerated Powdered Resin	292
References	294

## 11. Demineralizing Water Treatment in Nuclear (Atomic) Power Plants

I. Functions of Demineralizers in Nuclear Stations	297
II. Pressurized-Water Reactor Systems	298
III. Boiling-Water Reactor System	308
IV. Two Boiling-Water Reactor Installations	311
References	317

## 12. Comparison of Evaporators and Demineralizers and New Demineralizer Processes for Desalination

I. Advantages of Evaporators	319
II. Operating Problems with Evaporators	319
III. Typical Economic Studies of Evaporators and Demineralizers	321
IV. The Flash Evaporator	322
V. Comparison of Flash Evaporator and Demineralizer	323

VI. Experiences with Flash Evaporators	325
VII. Cation Exchange Presoftening of Brackish-Water Feed for an Evaporator Desalination Plant	326
VIII. New Demineralizing Processes for High-Solids Waters	329
References	339

### 13. Continuous Ion Exchange

I. Review of Past Fixed-Bed Design Criteria and Their Change	341
II. Description of Continuous Method	342
III. History of Continuous Method	342
IV. The Higgins Design	343
V. The Asahi Design	346
VI. Economic Comparison of Continuous-Bed and Fixed-Bed Plants	350
VII. Operating Problems with Continuous Beds	350
VIII. Field of Application	352
References	352

### 14. Chemical Processing by Ion Exchange

I. Solid Exchangers with Chemical Regenerants	354
II. Applications: Removal of Impurities for Upgrading Products	355
III. Applications: Recovery of Valuable Substances and Purification of Liquors for Reuse	362
IV. Solid Exchangers with Water Elution and No Chemical Regenerants	367
V. Liquid Exchangers	370
References	374
