## PART 1 INTRODUCTION TO TREATMENT OF WASTEWATER AND POTABLE WATER IN FLUIDISED BEDS

١٢٣٤

٥٦٧٨٩

### Chapter 1 Immobilised biomass – a basis for process development in wastewater treatment

**B. Atkinson**, Department of Chemical Engineering, University of Manchester Institute of Science and Technology, UK

1.1 Introduction . . . . .	22
1.2 Objectives . . . . .	23
1.3 Theoretical principles and methodology . . . . .	27
1.4 Concluding remarks . . . . .	32
1.5 References . . . . .	34
1.6 Nomenclature . . . . .	34

### Chapter 2 Fluidised beds in water treatment – a short historical introduction

**D. G. Miller**, Water Research Centre, Medmenham Laboratory, UK

2.1 Introduction . . . . .	35
2.2 Terminology . . . . .	35
2.3 Clarification . . . . .	36
2.4 Biological treatment . . . . .	41
2.5 Softening . . . . .	44
2.6 References . . . . .	46

### Chapter 3 Removal of ammonia and nitrate in the treatment of potable water

R. B. Gauntlett, Water Research Centre, Medmenham Laboratory, UK

3.1	Introduction . . . . .	48
3.2	Ammonia removal . . . . .	51
3.3	Nitrate removal . . . . .	53
3.4	References . . . . .	58
<b>Discussion . . . . .</b>		<b>59</b>

## PART 2 BASIC PRINCIPLES OF FLUIDISED BEDS

### Chapter 4 Fluid mechanics and aeration characteristics of fluidised beds

J. C. Lee and P. S. Buckley, Department of Chemical Engineering, University College of Swansea, UK

4.1	Introduction . . . . .	62
4.2	Onset of fluidisation . . . . .	62
4.3	General character of gas dispersion . . . . .	64
4.4	Gas dispersions in large particle beds . . . . .	67
4.5	Gas-liquid mass transfer coefficients . . . . .	70
4.6	Conclusions and recommendations . . . . .	72
4.7	Symbols used . . . . .	73
4.8	References . . . . .	74

### Chapter 5 The characteristics of solid supports and biomass support particles when used in fluidised beds

B. Atkinson, G. M. Black and A. Pinches, Department of Chemical Engineering, University of Manchester Institute of Science and Technology, UK

5.1	Introduction . . . . .	75
5.2	Choice of support particles . . . . .	78
5.3	Particle properties . . . . .	82
5.4	Reactors with steady particle biomass hold-up . . . . .	89
5.5	Reactors with accumulating particle biomass hold-up . . . . .	97
5.6	Concluding remarks . . . . .	102
5.7	References . . . . .	104
5.8	Nomenclature . . . . .	105
<b>Discussion . . . . .</b>		<b>107</b>

**PART 3 TREATMENT OF SEWAGE IN FLUIDISED BEDS****Chapter 6 Secondary treatment of municipal wastewater with fluidised bed technology**

**J. S. Jeris and R. W. Owens, Ecolotrol Inc., USA; F. Flood, Nassau County Department of Public Works, USA**

6.1	Introduction. . . . .	112
6.2	Pilot plant description . . . . .	112
6.3	Results of pilot plant operation . . . . .	115
6.4	Design of Bay Park wastewater facility . . . . .	117
6.5	References. . . . .	120

**Chapter 7 Complete treatment of sewage in a two-fluidised bed system**

**P. F. Cooper and D. H. V. Wheeldon, Water Research Centre, Stevenage Laboratory, UK**

7.1	Introduction. . . . .	121
7.2	Experimental programme . . . . .	122
7.3	Characterisation of the anoxic fluidised-bed reactor . . . . .	124
7.4	Characterisation of the oxygenic reactor using anoxic-reactor effluent . . . . .	139
7.5	Conclusions . . . . .	142
7.6	Acknowledgements . . . . .	143
7.7	References. . . . .	143

**Chapter 8 Steady- and -non-steady-state performance of the aerobic (oxygenic) biological fluidised bed**

**S. G. Nutt, Dearborn Environmental Consulting Services, Canada,**

**J. P. Stephenson, Wastewater Technology Centre, Canada, and**

**J. H. Pries, Canviro Consultants Limited, Canada**

8.1	Introduction. . . . .	145
8.2	Description of pilot-scale fluidised-bed system . . . . .	146
8.3	Steady-state performance . . . . .	146
8.4	Performance under diurnal loading conditions. . . . .	148
8.5	Dynamic modelling of the fluidised-bed process . . . . .	150
8.6	Conclusions . . . . .	158
8.7	Acknowledgements . . . . .	159
8.8	References. . . . .	159

<b>Discussion</b>	. . . . .	161
-------------------	-----------	-----

**Chapter 9 United States Environmental Protection Agency research and current thinking on fluidised-bed biological treatment**

**E. T. Oppelt and J. M. Smith, United States Environmental Protection Agency, USA**

9.1	Background . . . . .	165
-----	----------------------	-----

9.2	Experimentation . . . . .	166
9.3	Conclusions . . . . .	176
9.4	Future prospects for fluidised systems . . . . .	177
9.5	References . . . . .	178
<b>Chapter 10 Fluidised sand recycle reactor for aerobic biological treatment of sewage</b>		
<b>O. A. Sehic, Melbourne and Metropolitan Board of Works, Australia</b>		
10.1	Introduction . . . . .	179
10.2	Materials and methods . . . . .	180
10.3	Definitions . . . . .	182
10.4	Results and discussion . . . . .	183
10.5	Conclusions . . . . .	188
10.6	Acknowledgements . . . . .	188
10.7	References . . . . .	188
<b>Discussion</b>	. . . . .	<b>190</b>
<b>Chapter 11 Biological wastewater treatment in a three-phase fluidised-bed reactor</b>		
<b>B. Chatib, A. Grasmick, S. Elmaleh and R. Ben Aim, Université des Sciences et Techniques du Languedoc, France</b>		
11.1	Introduction . . . . .	192
11.2	Material and methods . . . . .	192
11.3	Experimental results . . . . .	194
11.4	Model of biological fluidised-bed treatment . . . . .	198
11.5	Conclusions . . . . .	202
11.6	Acknowledgement . . . . .	203
11.7	Notation . . . . .	203
11.8	References . . . . .	204
<b>Chapter 12 Denitrification of domestic wastewater in an upflow sludge-blanket reactor without carrier material for the biomass</b>		
<b>A. Klapwijk, H. Smit and A. Moore, Department of Water Pollution Control, Agricultural University, Wageningen, The Netherlands</b>		
12.1	Introduction . . . . .	205
12.2	Preliminary experiments with a small system . . . . .	206
12.3	Start-up of the 100-litre reactor . . . . .	209
12.4	Treatment of 750-litres per day settled domestic sewage in a 'two-sludge system with preliminary denitrification' . . . . .	211
12.5	Treatment of 2160-litres per day settled domestic wastewater in a 'two-sludge system with preliminary denitrification' . . . . .	212
12.6	Conclusions . . . . .	215

12.7	Acknowledgements . . . . .	215
12.8	References . . . . .	215
<b>Discussion . . . . .</b>		<b>217</b>

## **PART 4 TREATMENT OF INDUSTRIAL WASTEWATER**

### **Chapter 13 The technology and economics of the treatment of a concentrated nitrogenous industrial effluent by biological denitrification using a fluidised-bed reactor**

**Mrs. J. Bosman and F. Hendricks, AECI Limited, South Africa**

13.1	Introduction. . . . .	222
13.2	Characteristics of the wastewater . . . . .	222
13.3	Previous investigations . . . . .	223
13.4	Laboratory studies. . . . .	224
13.5	Pilot plant studies . . . . .	227
13.6	Effluent treatment costs . . . . .	231
13.7	Conclusions . . . . .	232
13.8	References . . . . .	232

### **Chapter 14 Biological denitrification of high-nitrate wastes generated in the nuclear industry**

**C. W. Francis and C. W. Hancher, Oak Ridge National Laboratory, USA**

14.1	Introduction. . . . .	234
14.2	Nitrate wastes in the nuclear industry . . . . .	234
14.3	Factors influencing rates of denitrification of various waste streams in the nuclear industry . . . . .	235
14.4	Bench-scale tests . . . . .	241
14.5	Process development unit . . . . .	245
14.6	Conclusions . . . . .	248
14.7	Disclaimer and acknowledgement . . . . .	249
14.8	References . . . . .	249

### **Chapter 15 Development of the attached microbial film expanded-bed process for aerobic and anaerobic waste treatment**

**W. J. Jewell, Cornell University, USA**

15.1	Introduction. . . . .	251
15.2	Objectives . . . . .	252
15.3	Background . . . . .	252
15.4	Materials and methods . . . . .	254
15.5	Results . . . . .	255
15.6	Discussion . . . . .	263
15.7	Summary and conclusions. . . . .	264
15.8	Acknowledgements . . . . .	265
15.9	References . . . . .	265

<b>Discussion . . . . .</b>		<b>268</b>
-----------------------------	--	------------

**PART 5 PROCESS ENGINEERING OF FLUIDISED BEDS****Chapter 16 The use of plastic, porous biomass supports in a pseudo-fluidised bed for effluent treatment**

I. Walker and E. P. Austin, Simon Hartley Limited, UK

16.1	Introduction . . . . .	272
16.2	Experimental details . . . . .	272
16.3	Conclusions . . . . .	282
16.4	References . . . . .	282
16.5	Appendix: An example of a proposed CAPTOR installation . . .	283

**Chapter 17 Dorr-Oliver's Oxitron System<sup>TM</sup> fluidised-bed water and wastewater treatment process**

P. M. Sutton, W. K. Shieh and P. Kos, Dorr-Oliver Incorporated, USA

P. R. Dunning, Dorr-Oliver Company Limited, UK

17.1	Introduction . . . . .	285
17.2	Process and component design principles . . . . .	285
17.3	Process and component design information and performance results . . . . .	287
17.4	Design conclusions . . . . .	297
17.5	Oxitron system economics . . . . .	299
17.6	Acknowledgements . . . . .	300
17.7	References . . . . .	300
<b>Discussion</b>	. . . . .	<b>301</b>

**PART 6 PROCESS ECONOMICS****Chapter 18 Economic studies of biological fluidised-beds for wastewater treatment**

D. H. V. Wheeldon and R. W. Bayley, Water Research Centre, Stevenage Laboratory, UK

18.1	Introduction . . . . .	306
18.2	Sources of cost data and method of economic assessment . . . .	308
18.3	BFB systems compared with conventional activated-sludge treatment . . . . .	308
18.4	Discussion . . . . .	315
18.5	Conclusions . . . . .	319
18.6	Acknowledgements . . . . .	320
18.7	References . . . . .	320
18.8	Appendix A – Costing of oxygen . . . . .	321
18.9	Appendix B – Assumptions made in sizing BFB and AS plant items . . . . .	325

<b>Chapter 19 Biological fluidised-bed denitrification of surface water. The economics of a remedy for nitrate in drinking water</b>	
<b>R. Gregory and I. Sheiham, Water Research Centre, Medmenham Laboratory, UK</b>	
19.1 Introduction . . . . .	329
19.2 Remedies considered . . . . .	331
19.3 Assumptions and conditions of the calculations. . . . .	332
19.4 Cost comparisons . . . . .	335
19.5 Conclusions . . . . .	350
19.6 References . . . . .	350
<b>Discussion . . . . .</b>	<b>351</b>
<b>APPENDIX I – SUPPLEMENTARY CONTRIBUTIONS</b>	
(i) Denitrification of sewage effluent on a full-scale using an expanded bed . . . . .	357
J. E. Hawkins, D. A. Stott, R. L. Stokes and A. Clennett, Thames Water Authority, UK	
(ii) Sand/biomass separation with production of a concentrated sludge . . . . .	361
P. F. Cooper, D. H. V. Wheeldon, P. E. Ingram-Tedd and D. W. Harrington, Water Research Centre, Stevenage Laboratory, UK	
(iii) Fluidised bed for the WRC Coleshill Experimental Plant . . . . .	368
D. H. V. Wheeldon, P. F. Cooper, R. F. Brazier and P. E. Ingram-Tedd, Water Research Centre, Stevenage Laboratory, UK	
(iv) An anaerobic fluidised-bed reactor for the treatment of industrial waste water containing chlorophenols . . . . .	374
R. Hakulinen, Enso-Gutzeit Osakeyhtio Research Centre, and M. Salkinoja-Salonen, University of Helsinki, Finland	
(v) BOD removal in fluidised beds: high biomass concentration or high oxygen transfer? . . . . .	383
J. P. Vanderborght and Ch. Gilliard, Université Libré de Bruxelles, Belgium	
<b>List of Delegates . . . . .</b>	<b>390</b>
<b>Index . . . . .</b>	<b>401</b>
