

CONTENTS

Part One General aspects of Water treatment	1
Chapter 1. Water: Physics, chemistry, biology	3
Chapter 2. Theory of main treatment processes	23
Part Two Main Processes and equipment used in water treatment	85
Chapter 3. Preliminary treatment	87
Chapter 4. Coagulation-flocculation-sedimentation	111
Chapter 5. Water filtration	143
Chapter 6. Modification of Carbonate equilibrium of water	217
Chapter 7. Iron and manganese removal	223
Chapter 8. Disinfection	229
Chapter 9. Ion exchange	247
Chapter 10. Chemical treatment processes	283
Chapter 11. Miscellaneous processes	303
Chapter 12. Aerobic biological treatment	337
Chapter 13. Waste Water Tertiary treatment	377
Chapter 14. Sludge treatment	383
Chapter 15. Measurement, monitoring, control and automation	477
Chapter 16. Reagent storage and feeding	507
Part Three Designs and construction of treatment plants	539
Chapter 17. Drinking-water treatment	541
Chapter 18. Swimming-pool water treatment	607
Chapter 19. Industrial process water treatment	619
Chapter 20. Town sewage treatment	671
Chapter 21. Industrial waste water treatment	737
Part Four General information and formulae	777
Chapter 22. Legislation and regulations	779
Chapter 23. Chemistry	827
Chapter 24. Methods of analysis	869
Chapter 25. Biology	929
Chapter 26. Units of measurement	973
Chapter 27. Hydraulics	987
Chapter 28. Electricity	1031
General bibliography	1041
Contents	1053
Alphabetical Index	1069
