628.16 FAU

CONTENTS

Principle : Reaction Rates in Solution	1
Application : Kinetics of Reactions Between Aqueous Chlorine and Nitrogen Compounds	23
Application : Kinetics of Reactions Between Chlorine and Phenolic Compounds	54
Principle : Physical Adsorption on Solids	75
Application : Sorption from Solution by Porous Carbon	89
Application : Adsorption on Clay Mineral Surfaces	127
Application : Sorption of Cesium on Stratified Mica	168
Principle : Electrical Phenomena at Surfaces	217
Application : Coagulation Versus the Flocculation of Colloidal Dispersions by high Polymers	
(Polyelectrolytes)	246
Application : Electrokinetic Characteristics of Hydrous Oxides of Aluminum and Iron	274
Application : Electrokinetic Characteristics of Silicic Surfaces	301
Application : Charge Reversal of lyophobic Colloids Egon matijevic	328
Principle : Factors Determining chemical Oxidation and reduction in Solution	370
Application : Kinetics of the Oxidation of Sulfites by Dissolved oxygen	380
Application : The Application of Oxidizing Chemicals to Organic Compounds	405
Application : Chemical Oxidation and Reduction Oxidation of Metals and Ions in Solution	433
Principle : Mineralogic Factors in Natural Water Equilibria	449
Application : The Formation and Behavior of Hydroxyapatite	470
Application : Ion Exchange in Solution	491
Application : Geochemical Control of Solubility of Aqueous Silica	505
Principle : Metal Ions in Aqueous Solutions Werner Stumm	520
Application : Chemical Equilibria and Kinetic Properties of Manganese in Natural Waters	561
Application : Equilibrium Chemistry of Iron in Ground Water	625
