

CONTENTS

Introduction	
I Municipal Water	1
Aeration	2
Drinking water standards	3
Surface waters	4
Chemistry of cold lime softening	6
Langelier Saturation Index	8
Filtration	10
Chemical feeding in water plants	13
Corrosion testing	14
II Industrial Water	17
Saturation and stability index	17
Types of corrosion	21
Alumina chemistry	22
III Boiler Water	25
Pretreatment systems	25
Hot process softeners	25
Silica removal	28
Diatomaceous filters	31
Ion exchange systems	31
Sodium Zeolite regeneration	37
Specifications for regenerants	40
Boiler chemical balances	42
Control limits boiler water	48
Chemical feed system	49
Boiler scale	49
Steam purity	53
Oxygen scavengers	55

Chemical injection nozzles	58
Storage of inoperative boilers	58
Boiler blowdown	59
Organics in boiler-water treatment	60
Boiler feedline deposits	63
Chelant programs	65
Chelant cleanup programs	69
Corrosion in condensate	72
* Caustic embrittlement	75
Coordinated pH-phosphate	77
Carbonate treatment system	77
Oil removal from condensate	78
Oil contamination in boiler	79
Inspection of boiler plant	79
Cleaning of boilers	81
Case history—600-psi. boiler system	81
Boiler plant automation	83
IV Cooling Water	87
Cooling water corrosion	87
Corrosion inhibitors	88
Closed cooling systems	88
Cooling water parameters	89
pH Control	96
Acid contamination	97
Stability and cooling water	98
Cooling system pretreatment principles	99
Cooling dispersants	100
On stream desludging	103
Process contamination	105
Treatment costs	105
Once-through cooling systems	106
Chloride stress corrosion	107
Corrosion monitoring	107
Slimicides	108
References	112
Reference Tables	114
