

CONTENTS

		Page
1.	General Considerations in Planning Water Supply Systems	1
2.	Consumption of Water	10
3.	Rainfall	28
4.	Evaporation, Percolation, and Absorption	37
5.	Surface Water	42
6.	Ground Water	55
7.	Storage Reservoirs	79
8.	Distributing Reservoirs	99
9.	Gravity Conduits	112
10.	Pipe Conduits	118
11.	Pipe Appurtenances	147
12.	Laying Pipe and Maintaining Lines	163
13.	Planning The Distribution System	197
14.	Hydraulics of Flow	204
15.	Design of Dead-End Distribution System	213
16.	Design of continuous-Flow System	219
17.	Pumps and Pumping	239
18.	Factors in Water Purification	262
19.	Physical Tests of Water	272
20.	Chemical Analysis of Water	287
21.	Bacteriological Examinations of Water	308
22.	Microscopical Examination	317
23.	Screening	324
24.	Sedimentation and Coagulation	331
25.	Filtration	368
26.	Disinfection	396
27.	Removing Dissolved Minerals	418
28.	Control of Corrosiveness	437
29.	Taste and Odor Control	444
30.	Fluoridation of Water	456
31.	Water for Industrial Uses	460
32.	Typical Design of Treatment Plant	463
	Appendix A : Distribution System Symbols	474
	Appendix B : Drinking – Water Standards of U.S. Public Health Service	475
	Appendix C : Planning for Emergencies and Civil Defense	483
	Appendix D : Problems	494
	Index	503
