

## CONTENTS

	Page
1. Aspects of the Quantitative Assessment of Germicidal Efficiency	1
2. A Multi-Poisson Distribution Model for Treating Disinfection Data	11
3. Recycle – What Disinfectant for Safe Water Then ?	49
4. Water Disinfection – Chemical Aspects and Analytical control	67
5. Selection of a Field Method for Free Available Chlorine	91
6. Interhalogens and Halogen Mixtures as Disinfectants	113
7. The comparative Mode of Action of Chlorine, Bromine, and Iodine on $f_2$ Bacterial Virus	145
8. Bromine Disinfection of Wastewater Effluents	163
9. Bromine Disinfection of Wastewater	179
10. Comparison of Bromine, Chlorine and Iodine as Disinfectants for Amoebic Cysts	193
11. Disinfection of Water and Wastewater Using Ozone	211
12. Economical Wastewater Disinfection with Ozone	233
13. Chlorine and Oxychlorine Species Reactivity with Organic Substances	249
14. The chemistry of Aqueous Nitrogen Trichloride	277
15. Kinetics of Tribromamine Decomposition	301
16. Dechlorination by Activated Carbon and other Reducing Agents	339
17. Comparative inactivation of Bacteria and Viruses in Tertiary-Treated Wastewater by Chlorination	359
18. Disinfection of Wastewater Effluents for Virus Inactivation	391
