

Contents and Subject Index

1. INTRODUCTION	1
1.1 Purpose	1
1.2 Scope	1
1.3 Using the Manual	1
1.4 Reference	2
2. SELECTING A PHOSPHORUS REMOVAL STRATEGY	3
2.1 Description of Approach	3
2.2 Information and Monitoring Data Required	3
2.2.1 New System Data Requirements	3
2.2.1.1 Effluent Discharge Requirements	3
2.2.1.2 Wastewater Characteristics	3
2.2.1.3 Other Information Required	4
2.2.2 Existing System Data Requirements	5
2.3 Possible Phosphorus Removal Alternatives	5
2.3.1 Chemical Addition Alternatives	5
2.3.1.1 Metal Salt Addition (Aluminum and Iron)	5
2.3.1.2 Lime Addition	6
2.3.2 Biological Phosphorus Removal Alternatives	6
2.4 Phosphorus Removal System Selection Strategy	8
3. PHOSPHORUS REMOVAL BY BIOLOGICAL PROCESSES	14
3.1 Introduction and Theory	14
3.1.1 Biological Phosphorus Removal Mechanism	15
3.2 Applications	17
3.2.1 Process Descriptions	18
3.3 Performance	24
3.3.1 Phostrip Performance	24
3.3.2 Modified Bardenpho Process Performance	25
3.3.3 A/O Process Performance	26
3.3.4 Operationally Modified Activated Sludge Process Performance	28
3.3.5 Factors Affecting Performance	29
3.3.5.1 Phostrip Process Solids Detention Time and Elutriant Quality	29
3.3.5.2 Effluent Suspended Solids	30
3.3.5.3 Available Organics for Phosphorus Removal	30

3.3.5.4	Effect of Solids Retention Time 31
3.3.5.5	Nitrate Nitrogen in the Anaerobic Zone 32
3.3.5.6	Wastewater Temperature 33
3.3.5.7	pH 33
3.3.5.8	DO Concentration in the Phosphorus Uptake Zone 33
3.3.5.9	Anaerobic Fermentator Zone Considerations 34
3.4	Equipment Requirements 35
3.5	Design Methodology 35
3.5.1	Phostrip Process 35
3.5.2	Mainstream Biological Phosphorus Removal Processes 37
3.5.2.1	Sludge Production 37
3.5.2.2	Phosphorus Removal Efficiency 38
3.5.2.3	Nitrate Nitrogen Removal Design 39
3.6	Process Modifications to Improve Performance 42
3.7	Retrofit Considerations 43
3.8	Case Histories 44
3.8.1	Phostrip Process—Little Patuxent, Maryland 44
3.8.2	Modified Bardenpho Process—Kelowna, Canada 45
3.8.3	A/O Process—Pontiac, Michigan 46
3.9	Costs 46
3.10	References 49
4.	PHOSPHORUS REMOVAL BY CHEMICAL ADDITION 54
4.1	Introduction and Theory 54
4.1.1	Aluminum Compounds 54
4.1.2	Iron Compounds 55
4.2	Application Points 56
4.2.1	Mineral Addition Before Primary Clarification 57
4.2.2	Mineral Addition to Secondary Processes 58
4.2.3	Mineral Addition at Multiple Points 59
4.3	Performance 59
4.4	Equipment Requirements 59
4.4.1	Chemical Handling and Storage 59
a.	Aluminum Salts 59
b.	Iron Salts 62
c.	Polymer 62
4.4.2	Dry Chemical Feeding and Dissolving 63
4.4.3	Liquid Chemical and Solution Feeding 64
4.4.4	Chemical Dosage Control 65
a.	Manual Control 65
b.	Flow Proportional and Programmed Control 66
c.	Feed Forward and Feedback Control 67
4.4.5	Chemical Mixing and Flocculation 67
4.4.6	Clarification 68
4.5	Design Methodology 68
4.5.1	Wastewater Characterization 68
4.5.2	Determination of Chemical Doses 69
4.5.3	Selection of Chemicals 69
4.5.4	Evaluation of Existing Unit Processes 69
4.5.5	Conduct of Full-Scale Trials 70
4.5.6	Design of Chemical Handling System 70
a.	Chemical Storage 70
b.	Dry Chemical Feed and Dissolution Systems 71

c. Chemical Solution Feeding	71
4.5.7 Design of Liquid Processes	72
a. Rapid Mixing	72
b. Flocculation	72
c. Clarification	73
4.5.8 Design of Sludge Handling System	73
4.5.9 Design Example	74
4.6 Retrofit Considerations	76
4.7 Case Histories	76
4.7.1 Orillia, Ontario	76
4.7.2 Elizabethtown, Pennsylvania	77
4.7.3 Little Hunting Creek, Virginia	78
4.8 Costs	79
4.9 References	79
5. SLUDGE HANDLING	82
5.1 Introduction	82
5.2 Current Practice for Handling Chemical Sludges	82
5.2.1 Introduction	82
5.2.2 Points of Chemical Addition and Methods of Combining Sludges	82
5.2.3 Sludge Generation Rates and Characteristics	83
5.2.4 Prevalence of Various Sludge Treatment and Disposal Options	86
5.3 Sludge Derived from Addition of Aluminum Salts	86
5.3.1 Sludge Characteristics	86
5.3.2 Sludge Generation Rates	87
5.3.3 Thickening	91
5.3.3.1 Gravity Thickening	91
5.3.3.2 Flotation Thickening	91
5.3.4 Stabilization	92
5.3.4.1 Aerobic Digestion	92
5.3.4.2 Anaerobic Digestion	93
5.3.5 Conditioning	94
5.3.5.1 Chemical Conditioning	94
5.3.5.2 Thermal Conditioning	94
5.3.5.3 Freezing	94
5.3.6 Dewatering	94
5.3.6.1 Drying Beds	95
5.3.6.2 Vacuum Filtration	95
5.3.6.3 Centrifugation	96
5.3.6.4 Pressure Filtration	97
5.3.6.5 Belt Press Filtration	98
5.3.7 Incineration	98
5.3.8 Disposal	98
5.4 Sludge Derived from Addition of Iron Salts	99
5.4.1 Sludge Characteristics	99
5.4.2 Sludge Generation Rates	99
5.4.3 Thickening	100
5.4.3.1 Gravity Thickening	100
5.4.3.2 Flotation Thickening	102
5.4.4 Stabilization	102
5.4.4.1 Aerobic Digestion	102
5.4.4.2 Anaerobic Digestion	102
5.4.5 Conditioning	103

- 5.4.6 Dewatering. 103
 - 5.4.6.1 Drying Beds 103
 - 5.4.6.2 Vacuum Filtration 104
 - 5.4.6.3 Centrifugation 105
 - 5.4.6.4 Pressure Filtration 105
 - 5.4.6.5 Belt Pressure Filtration 106
- 5.4.7 Incineration 106
- 5.4.8 Disposal. 106
- 5.5 Sludges Derived from Biological Phosphorus Removal Processes 107**
 - 5.5.1 Characteristics 107
 - 5.5.2 Sludge Generation Rates. 107
 - 5.5.3 Thickening 107
 - 5.5.4 Stabilization 107
 - 5.5.5 Conditioning 108
 - 5.5.6 Dewatering. 108
 - 5.5.7 Incineration 108
 - 5.5.8 Disposal. 108
- 5.6 Sludges Derived from Addition of Lime. 108**
- 5.7 Case Histories 109**
 - 5.7.1 Baltimore, Maryland 109
 - 5.7.2 Lorton, Virginia 109
- 5.8 Costs. 111**
- 5.9 References 111**
