

Contents and Subject Index

1. INTRODUCTION	1
2. WASTE CHARACTERIZATION	3
Metal Coatings	3
Smelting and Refining (Nonferrous Metal Manufacturing)	14
Paint, Ink, and Associated Products	14
Petroleum Refining	16
Iron and Steel Manufacturing	17
Photographic Industry	18
Leather Tanning and Finishing	18
Wood Preserving	19
Battery Manufacture	19
3. METALS RECOVERY TECHNOLOGIES	21
Chemical Precipitation	21
Process Description	21
Hydroxide Precipitation	22
Sulfide Precipitation	22
Carbonate Precipitation	28
Sodium Borohydride Precipitation	28
Phosphate Precipitation	29
Differential Precipitation	29
Zinc Cementation	29
Coagulation/Coprecipitation (Alum, Lime, and Polyelectrolytes)	30
Waste Feed Characteristics	30
Pretreatment Requirements	31

Posttreatment Requirements	31
Performance Data	31
Availability	33
Environmental Evaluation	36
Costs	37
Electrolytic Recovery	38
Electrowinning	38
Process Description	38
Technical Evaluation	39
Waste Feed Considerations	39
Pretreatment Requirements	41
Posttreatment Requirements	41
Performance Data	41
Availability	43
Environmental Evaluation	45
Costs	45
Electrodialysis	47
Process Description	47
Technical Evaluation	47
Waste Feed Considerations	47
Pretreatment Requirements	47
Posttreatment Requirements	49
Availability	49
Environmental Evaluation	49
Costs	49
High-Temperature Metals Recovery (HTMR)	50
Process Description	50
Waste Feed Characteristics	52
Pretreatment Requirements	53
Posttreatment Requirements	53
Performance Data	54
Availability	55
Environmental Evaluation	56
Costs	57
Membrane Separation	57
Microfiltration and Ultrafiltration	59
Process Description	59
Technical Evaluation	59
Waste Feed Considerations	59
Pretreatment Requirements	59
Posttreatment Requirements	59
Performance Data	59
Availability	61
Environmental Evaluation	62

Costs	62
Reverse Osmosis (RO)	62
Process Description	62
Technical Evaluation	63
Waste Feed Considerations	63
Pretreatment Requirements	63
Posttreatment Requirements	63
Performance Data	63
Availability	65
Process Maturity	65
Costs	65
Donnan Dialysis and Coupled Transport	66
Applicability of Membrane Separation Systems	69
Leaching	70
Process Description	70
Waste Feed Characteristics	72
Pretreatment Requirements	74
Posttreatment Requirements	74
Performance Data	74
Metals Recovery from Hydroxide Sludges ..	74
Biohydrometallurgy	77
Ammonium Carbonate Leaching	77
Aluminum-Finishing Sludges	79
Zinc Sulfate Sludge	80
Plating Sludge Ponds Remediation	80
Lead Wastes from Superfund Sites	81
Availability	81
Environmental Evaluation	85
Costs	85
Adsorption	86
Carbon Adsorption	86
Process Description	86
Technical Evaluation	88
Waste Feed Considerations	88
Pretreatment Requirements	88
Posttreatment Requirements	88
Performance Data	89
Chromium	89
Mercury	89
Availability	91
Environmental Evaluation	92
Costs	92
Ion Exchange	95
Process Description	95

Technical Evaluation	97
Waste Feed Considerations	97
Pretreatment Requirements	99
Posttreatment Requirements	99
Performance Data	99
Availability	100
Environmental Evaluation	101
Costs	102
Evaporation	102
Process Description	102
Technical Evaluation	105
Performance Data	108
Availability	111
Environmental Evaluation	112
Costs	113
4. CONCLUSIONS	123
REFERENCES	128
GLOSSARY	134
