

TABLE OF CONTENTS

<u>Section</u>		<u>Page</u>
1	SUMMARY . . .	1
2	COMPARISON OF RESOURCE RECOVERY STRATEGIES	3
	Alternative Strategies	3
	Material Recovery	3
	Energy Recovery	4
	Composting and Biochemical Processes	5 ✓
	Comparison of Processes	6
	Process Capital and Operating Costs	6
	Input and Output Streams	14
	Dates of Availability of Processes	16
	Building Blocks of Energy Strategy --	
	A Connecticut Example	19
3	SOLID REFUSE FUEL RECOVERY PROCESSES	21
	St. Louis Fuel Recovery Process	22
	Process Description	22
	Operating History and Experience	33
	Air and Water Pollution Considerations	41
	Scaling Considerations	41
	Cost Factors	42
	Conclusions	42
	A. M. Kinney/Black-Clawson Fuel Recovery Process	44
	Process Description	44
	Operating History and Experience	49
	Air and Water Pollution Considerations	51
	Scaling Considerations	53
	Cost Factors	53
	Conclusions	55
	Combustion Power Corporation CPU-400 Process	
	(Menlo Park)	59
	Process Description	59
	Operating History and Experience	64
	Scaling Considerations	64
	Air and Water Pollution Considerations	65
	Cost Factors	67
	Conclusions	68
	Composition and Heat Value of Average Municipal	
	Refuse	69
	Refuse Characteristics	69 ✓
	Heat Value of Refuse -- Definitions	70
	Refuse Composition	71
	Summary of Reported Heat Value Data	73

TABLE OF CONTENTS (Cont'd)

		<u>Page</u>
3	SOLID REFUSE FUEL RECOVERY PROCESSES (Cont'd)	
	Composition and Heat Value of Average Municipal Refuse (Cont'd)	
	Suggested Refuse Composition	73
	Seasonal Variation in Heating Value	74
	Projected Composition Changes	75
	Ultimate Analysis of Refuse and Refuse Fuel	77
	Mechanical Properties of Municipal Solid Waste	80
	Application Considerations	82
	European Experience	82
	U. S. Experience with Oil and Refuse Firing	83
	Air Pollution	83
	Corrosion and Erosion	94
	Hybrid Fuel Processing System	101
4	PYROLYSIS PROCESSES	105
	Garrett Pyrolysis System	107
	Components and Process	107
	Operating History and Experience	119
	Scaling Considerations	120
	Air and Water Pollution Considerations	121
	Cost Factors	122
	Garrett System Products	123
	Monsanto Landgard System	129
	Components and Process	129
	Operating History and Experience	135
	Scaling Considerations	136
	Air and Water Pollution Considerations	136
	Cost and Factors	138
	Union Carbide System	139
	Components and Process	140
	Operating History and Experience	147
	Scaling Considerations	148
	Air and Water Pollution Considerations	149
	Cost Factors	150
	Urban Research and Development System	151
	Components and Process	151
	Operating History and Experience	153
	Scaling Considerations	154
	Air and Water Pollution Considerations	155
	Cost Factors	155

TABLE OF CONTENTS (Cont'd)

Section

4	PYROLYSIS PROCESSES (Cont'd) .	
	Torrax System	155
	Components and Process	155
	Operating History and Experience	159
	Scaling Considerations	160
	Air and Water Pollution Considerations	160
	Cost Factors	163
	Charleston Regional Resource Recovery System	164
	Components and Process	164
	Characteristics of Products	166
	American Thermogen System	168
	General Discussion	169
	Refuse Conditioning	169
	Corrosion and Deposit Buildup	170
	Fuel Compatibility	171
	Summary	172
5	COMPOSTING PROCESSES	
	Introduction	175
	General Composting Processes	175 ✓
	Current Composting Status	177
	Fairfield-Hardy Process	179
	Components and Process	179
	Operating History and Experience	183
	Scaling Considerations	183
	Air and Water Pollution Considerations	184
	Cost Factors	184
	Summary	184
	Geochemical/Eweson Process	186
	Components and Process	186
	Operating History and Experience	189
	Scaling Considerations	190
	Air and Water Pollution Considerations	190
	Cost Factors	190
	Summary	190
	Ecology, Inc. (Varro) Process	191
	Components and Process	191
	Operating History and Experience	196
	Scaling Considerations	197
	Air and Water Pollution Considerations	197
	Cost Factors	197
	Summary	197

TABLE OF CONTENTS (Cont'd)

<u>Section</u>		
5	COMPOSTING PROCESSES (Cont'd).	
	Conservation International Process	199
	Components and Process	199
	Operating History and Experience	202
	Scaling Considerations	202
	Air and Water Pollution Considerations	202
	Cost Factors	202
	Summary	203
	General Discussion	204
	Compost as Soil Improver and Cover Material	204
	Comparison of Processes	207
6	COMPARISON OF FRONT-END SYSTEMS	
	Investigative Procedure	211
	Hybrid System	213
	Summary	213
7	SANITARY LANDFILLS	217
	Types of Landfill	219
	Technical Considerations	227
	Site Selection	229
	Landfill Design	230
	Operation	238
	Equipment Selection	244
	Ecological Impact	248
	Land Pollution	249
	Water Pollution	253
	Public Relations	257
	Landfill Economics	258
	Assumptions	258
	Total Cost Estimates	259
	Closing Dumps	261
	Community Involvement	262
	Rat and Fire Elimination	262
	Coverup Operation	262
	Water Quality Protection	265
	Ultimate Use	265
	Summary	265
8	BALING AND BALEFILL	
	Baling and Balefill Technology	
	High-Pressure Compaction of Solid Waste Materials	

TABLE OF CONTENTS (Cont'd)

<u>Section</u>	<u>Page</u>
8	BALING AND BALEFILL (Cont'd) 271 Baling and Balefill Technology (Cont'd) 271 Leachate and Gas Generation 278 Stability in Handling and Rail Hauling of Baled Refuse 281 Balefills 281 St. Paul Baling Facility 282 San Diego Baling Facility and Balefill Operation 285
9	FACILITIES AND COMPONENTS Receiving Area Design Requirements 287 Shredders 289 Introduction 289 Glossary 298 History 303 Assessment of Equipment Available 304 Summary 309 Wet Pulpers 309 Air Separators 310 Vertical Air Column Classifiers 310 Zig-Zag Classifiers 310 Rotating Drum Air Classifier 311 Conveyers 311
Appendix	
I	TRIP REPORTS DESCRIBING MUNICH AND STUTTGART INCINERATORS. Munich North Plant 315 Stuttgart Incinerator/Powerplant 316
II	HYBRID FACILITY DESCRIPTION AND CAPITAL COST ESTIMATE Plant 319 Site 319 Building 320 Process 320 Escalation 323 Contingencies 324 Architect-Engineer Costs 324 Summary 324

TABLE OF CONTENTS (Cont'd)

Appendix

III	COST ANALYSIS OF AMERICAN HOIST AND DERRICK COMPANY BALING OPERATION	
	Section 1 -- Completely New Baling Facility	329
	Section 2 -- Existing Incinerator Conversion	333
IV	TRIP REPORTS DESCRIBING EUROPEAN SHREDDERS .	
	Lanway Company	337
	Svedala Arbra Company	338
V	REFERENCES .	341

LIST OF ILLUSTRATIONS

Figure

1	Net Disposal Costs Associated with Municipally Owned Resource Recovery Systems at Various Plant Capacities	8
2	Sensitivity of System Economics to Market Value of Recovered Resources (1000 tons/day)	10
3	Capital Costs .	11
4	Expected Refuse Consumption of Norwalk Harbor Units 1 and 2	18
5	Cover Pages of U. S. Patent for Pneumatically Transporting High-Moisture Fuels	23
6	Components of St. Louis Refuse Processing Facilities	25
7	Solid Waste Processing Facilities.	25
8	Air Density Separator	27
9	Diagrammatic View of St. Louis Supplementary Fuel Processing Plant	28
10	Schematic Diagram of Receiving and Fuel Handling System.	29
11	Refuse Firing Prototype	30
12	A. M. Kinney/Black-Clawson Fuel Recovery Process Flow.	45
13	Black-Clawson Material Recovery Process	46
