

CONTENTS

	Page
Part 1. Theory and Mechanism Of Biological Waste Treatment	
1-1 Bacterial Nutrition and Synthesis	3
1-2 Kinetics of Biological Oxidation	18
1-3 Principles of Biological oxidation	35
1-4 Factors Affecting Efficiency and Solids Production In the Activated Sludge Process	49
1-5 A Study of the Equilibria and Kinetics of Adsorption by Activated Sludge	66
1-6 Biological Flocculation	88
1-7 Biochemical Oxidation of Glucose by Dispersed Growth Aeration	101
1-8 Factors Influencing Development of Biological Flocs	108
1-9 Biophysical Processes in Slime Film and Floc Formation	116
1-10 The Application of the Logarithmic Equation in Biological Oxidation	121
References to Part 1	134
Part 2. Aeration – Theory and Design	
2-1 The Nature of the Oxygen Transfer Coefficient in Aeration Systems	141
2-2 Absorption of Oxygen in Bubble Aeration	149
2-3 Aeration and Oxygen Transport in Biological Systems – Basic Consideration	172
2-4 Preliminary Investigations into the effect of Oxygen Tension on Biological Sewage Treatment	192
2-5 Oxygen Supply as the Limiting Factor in Activated Sludge Purification	208
2-6 Evaluation Proprietary Aeration Devices	212
2-7 Theory and Development of Aeration Equipment	215
2-8 Practical Design Considerations in the Application of Aeration Equipment	225
2-9 Aeration of Biological Systems Using Mixing Impellers	231
2-10 Mechanical Air Dispersers for Sewage and Waste treatment	241
References to Part 2	251
Part 3. Sewage Treatment	
3-1 A Rational Approach to the Design of Activated Sludge Plants	257
3-2 Effect of BOD Loadings on Activated Sludge Plant Operation	271
3-3 The Utilization of the Kinetics of Activated Sludge in process and Equipment Design	277
3-4 Principles of Activated Sludge Operation	284
3-5 High-Rate Filters of biofiltration Type and Their Application to Biological Treatment of Sewage	304
3-6 Some Aspects Affecting Biological oxidation of Domestic Sewage	324
3-7 Final clarifiers and Clarifier Mechanisms	328
References to Part 3	342
Part 4. Industrial Waste Treatment	
4-1 Design of Waste Treatment Plants for the Pulp and Paper Industry	347
4-2 Activated Sludge at High Temperatures and High pH Values	352
4-3 Dairy Waste Treatment Plant Design	356
4-4 The Evaluation and Design of Biological Treatment Facilities for Pharmaceutical Wastes	360
4-5 Biological Oxidation of Petroleum Phenolic Waste Waters	370
4-6 Cannery Waste Oxidation by Activated sludge	379
References to Part 4	383
Author Index	385
Subject Index	389
