

Table of Contents

Preface	13
PART 1: GAS TRANSFER	
Chapter 1 Oxygen Transfer in the Activated Sludge Process	
A. G. BOON, Water Research Centre, Stevenage, England	
Introduction	17
Oxygen requirements	18
Oxygen supply	20
Performances of aeration systems	26
New processes.	27
Conclusions	30
Chapter 2 Pressurised Low Energy Gas Transfer	
R. E. SPEECE, Drexel University, Philadelphia, U.S.A.; RASHID H SIDIQI, College of Petroleum and Minerals, Saudi Arabia; RAYMOND AUBERT and EDWARD DIMOND, Drexel University Philadelphia, U.S.A.	
Introduction	34
Pressurised low energy gas transfer	34
Energy requirements for dissolved air flotation	36
Results of EZ-GAS dissolved air flotation.	37
Results with pure oxygen	39
Oxygen transfer from air.	42
Summary.	45
Chapter 3 Effect of Bubble Size on Oxygen Utilization in Aeration Processes	
M. MOTARJEMI and G. J. JAMESON, Imperial College, London, England.	
Introduction.	48
Mass transfer calculations	48
Results	51
Conclusions	56

PART 2: BIOLOGICAL TREATMENTS**Chapter 4 Time Domain Techniques in the Study of Treatment Plant Performance**

P. COACKLEY, J. M. CROWTHER, I. M. HAMILTON and J. F. DALRYMPLE, University of Strathclyde, Glasgow, Scotland

Introduction	61
The techniques of time series analysis	62
Discussion	71
Conclusion	72

Chapter 5 Anaerobic Contact Digestion for Treating High Strength Soluble Wastes

G. K. ANDERSON and T. DONNELLY, University of Newcastle-upon-Tyne, England

Introduction	75
Digester systems used	77
Modelling of digesters	79
The contact digester model	80
Mass balances across reactor	81
Derivation of linear forms	83
Feed constituents	85
Discussion	88
Conclusions	94

Chapter 6 Denitrification of High Nitrate Wastes Using an Anaerobic Filter

G. K. ANDERSON and A. IBRAHIM, University of Newcastle-upon-Tyne, England

Introduction	97
Denitrification	98
Pilot investigation	99
Conclusions	104

Chapter 7 Denitrification of Sewage Effluent by an Attached Growth Technique

J. E. HAWKINS, Thames Water Authority, Waltham Cross, England; P. F. COOPER, Water Research Centre, Stevenage, England; R. L. STOKES and M. R. SEAMAN, Thames Water Authority, Waltham Cross, England

Introduction	107
Choice of denitrification technique	108
Mechanisms of denitrification	112

Table of Contents

Previous investigations of the attached-growth techniques	114
Rates of denitrification.	116
Description of filter system used in present trial	116
Results of trial	119
Provisional conclusions.	124
Future work.	124
Chapter 8 Inhibiting Constituents in the Biological Treatment of Carbonization Wastes	
J. R. CATCHPOLE and R. L. COOPER, The British Carbonization Research Association, Chesterfield, England	
Introduction.	128
Influence of liquor components on biological treatment	129
Basic studies in inhibition and acceleration of biological processes	131
Experiments with activated sludge from an alternative source . . .	136
Conclusions	138
Chapter 9 'Sewage Fungus' Growth in Rivers below Paper Mill Discharges	
J. C. ROBERTS, Research Association for the Paper and Board Printing and Packaging Industries, Leatherhead, England	
Introduction.	140
Experimental methods	143
Results and discussion	146
Conclusions	156
Chapter 10 Mechanical Blending of Mixed Liquor in Batch Activated Sludge Systems	
RONALD L. DROSTE and JATINDER K. BEWTRA, University of Windsor, Ontario, Canada	
Introduction.	159
Theory and literature review	159
Experimental set-up and procedures	162
Observations and discussions-.	166
Conclusions	172
PART 3 SLUDGE TREATMENTS	
Chapter 11 Characteristics of Sludge from the Deep Shaft Process	
E. H. DUNLOP, Imperial Chemical Industries Ltd., Agricultural Division, Billingham, England	
Introduction.	177

Process description	177
Intrinsic sludge properties	178
Tracer studies	180
Effect of high dissolved oxygen upon sludge activity	183
Sludge protozoal population	184
Sludge mineralization	184
Dewatering of deep shaft sludge	186
Aerobic digestion	197
Chapter 12 The Beltsville Aerated Pile Method for Composting Sewage Sludge	
E. EPSTEIN, G. B. WILLSON and J. F. PARR, U.S. Dept. of Agriculture, Beltsville, Maryland, U.S.A.	
Introduction.	201
The method and process technology	202
Space requirements and economic considerations	204
Factors affecting the composting process	205
Investigations of different bulking materials	207
Destruction of pathogens	209
Aspects of heavy metals in sewage sludge composting.	210
Summary.	211
PART 4 COMBINED BIOLOGICAL-PHYSIOCHEMICAL TREATMENTS	
Chapter 13 Combined Physico-Chemical and Biological Processes for Treatment of Domestic Wastes	
MICHEL A. PICARD, Degrémont S.A., Surèsnes, Paris, France	
Introduction.	217
Description of process: biological filtration	218
Description of pilot unit	221
Results of pilot unit operation	223
Conclusions	225
Chapter 14 High Quality Water from Integrated Physico-Chemical Biological Treatment	
G. G. CILLIÉ and L. R. J. van VUUREN, National Institute for Water Research, Pretoria, South Africa	
Introduction.	229
Process description	230
Operational results.	232
Discussion of results.	233
Chemical treatment costs	238

Effects of toxic loads on plant performance	239
Conclusions	241

Chapter 15 Performance of Upflow Sandfilters following an Activated Sludge Plant

VOLKAR MAYER, University of Stuttgart, W. Germany

Introduction	244
Variables affecting removal efficiency	244
Nature and properties of suspended particles	246
Suspended solids removal with pilot plant	249
Summary and conclusions	256

Chapter 16 Influence of Particle Characteristics on the Microscreen Process

MANFRED ROTH, University of Stuttgart, W. Germany

Introduction	258
Filterability and the Boucher Index	259
Discussion of particle characteristics	265
Summary and conclusions	274

PART 5 PHYSIOCHEMICAL TREATMENTS

Chapter 17 Use of Sandfilters in Tertiary Treatment as Nitrification Units

RÜDIGER MÜLLER, University of Stuttgart, W. Germany

Introduction	281
Experimental procedure	282
Results	285
Determination of nitrification velocities in a batch reactor	293
Summary and conclusions	299

Chapter 18 Hydrogen Peroxide as a Backwashing and Conditioning Aid in the Filtration Process

I. SEKOULOV, University of Stuttgart, W. Germany

Introduction	302
Hydrogen peroxide as a backwashing aid	302
Hydrogen peroxide conditioning of filters	304
Conclusions	305

Chapter 19 Kinetics of Activated Carbon Adsorption

W. A. BEVERLOO and S. BRUIN, Agricultural University, Wageningen, Netherlands

Introduction	307
------------------------	-----

Structure of activated carbon. 307
Models of diffusion within activated carbon particles . .	. 307
Solutions of diffusion equations. 312
Finite-bath experiments 319
Conclusions 322
Chapter 20 Waste Water Treatment by Catalytic Oxidation	
ERIC ROBINSON, Lambeg Industrial Research Association, Lisburn, N. Ireland	
Introduction. 324
Experimental 324
Results 325
Discussion 329
Chapter 21 Solar Energy and Recovery of Waste Water for Irrigation	
A. J. ACHER, Institute of Soils, The Volcanic Centre, Bet Dagan, Israel	
Introduction. 331
Experimental 332
Results and discussion 334
Conclusions 337
Chapter 22 Slow Reagent Release in Water Treatment	
NAVA NARKIS and MOSHE NARKIS, Technion-Israel Institute of Technology, Haifa, Israel	
Introduction. 339
Experimental 340
Results and discussion 340
PART 6 PROTEIN RECOVERY	
Chapter 23 Process Control of Anaerobic Digestion for SCP Recovery	
K. THOMAS and L. EVISON, University of Newcastle-upon-Tyne, England	
Introduction. 349
Experimental 351
Results and discussion 352
Summary 362
Conclusions 363

Table of Contents

Chapter 24 Microbial Conversion of Piggery Waste to a Protein Feed Supplement

S. REDDINGTON and D. E. BROWN, University of Manchester
Institute of Science and Technology, England

Introduction	366
Experimental methods	367
Experimental equipment	320
Fermentation details	371
Experimental results	372
Recycle process	376
Conclusions	377

Chapter 25 Protein Recovery from Waste Activated Sludge

JUDITH B. CARBERRY, THOMAS F. McCAFFERY III and
ROBERT M. CLUNIE, University of Delaware, Newark, U.S.A.

Introduction	379
Background literature	380
Experimental considerations	382
Results and discussion	386
Conclusions	393
Appendix	397

Chapter 26 Application of Ion Exchangers Derived from Regenerated Cellulose

R. A. GRANT, Ecotech Systems Ltd., Poole, England

Introduction	405
Preparation and properties	406
Adsorption and desorption of pure proteins	408
Slaughterhouse effluent treatment	410
Removal of organic impurities from raw water	413
Distillery condensate treatment	414
Recovery of lysozyme from egg packing wastes	415
Conclusions	415
