

CONTENTS

	Page
Preface	xi
1. Emerging Technologies in Hazardous Waste Management : An Overview	1
Physical and Chemical Wastewater Treatment	
2. Comparative Aspects of Advanced Oxidation Processes	18
3. Supercritical Water oxidation Technology : Process Development and Fundamental Research	35
4. Photo-Assisted Mineralization of Herbicide wastes by Ferric Ion Catalyzed Hydrogen Peroxide	77
5. Toxic Pollutant Destruction : Comparison of the Oxidants Potassium Permanganate, Fenton's Reagent, and Chlorine Dioxide on the Toxicity of substituted Phenols	85
6. Ultrasonically Accelerated Photocatalytic Waste Treatment	106
7. Adsorptive and Chemical Pretreatment of Reactive Dye Discharges	119
Biological Treatment	
8. Applicability of biological Processes for treatment of Soils	138
9. Development of Nonlinear Group Contribution Method for Prediction of Biodegradation Kinetics from Respirometrically Derived Kinetic Data	159
10. Degradation of Cyanides by the White Rot Fungus Phanerochaete Chrysosporium	191
11. Protocol for Determining the Rate of Biodegradation of Toxic Organic Chemicals in Anaerobic Processes	203
12. Anaerobic Digestion of Industrial Activated Aerobic Sludge	219
Soil Remediation and Treatment	
13. Comparison of the Effectiveness of Emerging In Situ Technologies and Traditional Ex Situ Treatment of Solvent-Contaminated soils	238
14. Constant Capacitance Model : Chemical Surface Complexation Model for Describing Adsorption of Toxic Trace Elements on Soil Minerals	278
15. Modeling Brackish Solution Influences on the Chemical and Physical behavior of Temperate Region Soils	308
16. Decomposition of Perchloroethylene and Polychlorinated Biphenyls with Fenton's Reagent	343
Treatment of Volatile Compounds	
17. Catalytic Oxidation of trichloroethylene and Methylene Chloride	358
18. Advanced Ultraviolet Flash Lamps for the Destruction of Organic Contaminants in Air	380
19. Chemical Detoxification of Trichloroethylene and 1,1,1-Trichloroethane in a Microwave Discharge Plasma Reactor at Atmospheric Pressure	393
20. Bioprocessing of Environmentally Significant Gases and Vapors with Gas-Phase Bioreactors : methane, Trichloroethylene , and Xylene	411
21. Mediated Electrochemical Process for Hazardous Waste Destruction	430
22. Long-term Durability of Polyethylene for Encapsulation of Low-Level Radioactive , Hazardous, and Mixed Wastes	439
