

## CONTENT

	Page
Preface	v
List of Contributors	ix
1. Biodegradation of Solid Wastes by Composting	1
2. Methods for the Biological Treatment of Exhaust Gases	31
3. Biological Treatment of liquid Effluents	47
4. Biological Nutrients Removal	85
5. Biosensors in Biodegradation of Wastes	103
6. Exploiting computers in Biological Waste Treatment	133
7. Water Quality Modelling of BOD and DO in Rivers Using a Hydrological Model	151
8. Dehalogenation Reactions Catalyzed by Bacteria	187
9. Biodegradation of sanitary Landfill Leachate	207
10. Biodegradation in Waste Stabilization Ponds (Facultative Lagoons)	231
11. Applications of Adapted Microorganisms for site Remediation of Contaminated Soil and ground Water	247
12. Application of Adapted Bacterial Cultures for the Degradation of Xenobiotic Compounds in Industrial Waste-Waters	261
13. The RUDAD-Process for Enhanced Degradation of Solid Organic Waste materials	287
14. An Innovative Biological Process for heavy Metals Removal from Municipal Sludge	307
15. Biological Treatment of Petroleum Refinery Wastewater	323
16. Peat as an Agent in Biological Degradation : Peat Biofilters	341
17. Biodegradation of Process Industry Wastewater Case Problem : Sugarcane Industry	363
18. Biodegradation of Textile Wastewaters	389
Index	413
