

# Contents

Introductory Remarks

*M. Vert, France*

## Session 1: How to trigger polymer degradation

Non-microbial Degradation of Polyesters: Mechanisms  
and Modifications

*C.G. Pitt, USA*

Mechanisms of Bacterial Degradation of Polyethers  
and Their Copolymers

*F. Kawai, Japan*

20

Mechanisms of Abiotic Degradation of Synthetic  
Polymers

*J. Lemaire, P. Dabin, and R. Arnaud, France*

30

## Session 2: Soil microbiology

Microbial Activity in Soil and Water Environments  
with an Emphasis on the Degradation of Synthetic  
Polymers

*Z. Filip, Germany*

45

Studies of The Biodegradation of Synthetic Plastics

*J.E. Guillet, H.X. Huber, and J. Scott, Canada*

55

Session 3: Consensus on definitions and nomenclature 73

## Session 4: How to degrade polymers

The Effect of Material Parameters on the Properties  
and Biodegradation of 'BIOPOL'

*M.K. Cox, UK*

95

Microstructure and Biodegradability of Mater-Bi Products	101
<i>C. Bastioli, V. Bellotti, L. Del Giudice, and G. Gilli, Italy</i>	
/ Statics and Dynamics of Biodegradation in Polymer-Starch Blends	112
<i>R.P. Wool, R. Raghavan, S. Billieux, and G. Wagner, USA</i>	
Cell/Polymer Interactions in the Biodegradation of Polyurethanes	122
<i>J.M. Anderson, A. Hiltner, Q.H. Zhao, Y. Wu, M. Renier, M. Schubert, M. Brunstedt, G.A. Lodoen, and C.R. Payet, USA</i>	
<b>Session 5: Effects of structures on polymer degradation</b>	
Structural Effects on the Biodegradation of Microbial and Synthetic Poly(hydroxyalkanoates)	139
<i>Y. Doi, Y. Kumagai, N. Tanahashi, and K. Mukai, Japan</i>	
The Effects of Structure and Morphology on the Degradation of Polymers with Multiple Groups	149
<i>S.J. Huang, M.S. Roby, C.A. Macri, and J.A. Cameron, USA</i>	
<b>Session 6: Standards and reference test methods</b>	
Introduction	161
Regulations and Standards in Europe	165
<i>P. Breant and Y. Aitken, France</i>	
An Overview of the Activities of the Biodegradable Plastics Society	169
<i>F. Fukuda, Japan</i>	
Development of Standards for Degradable Plastics by ASTM Subcommittee D-20.96 on Environmentally Degradable Plastics	176
<i>R. Narayan, USA</i>	
<b>Session 7: Mathematical modelling</b>	
A Stochastic Model for Oligomers Produced by Degradation of Linear Polymers	191
<i>G. Grancher, France</i>	

*Contents*

Enzymic Degradation of Biopolymers by Non-random Processes: Theoretical Aspects and Experimental Results 201  
*N. Lotan, S. Portnoy, R. Azhari, and S. Sideman, Israel*

Theoretical Aspects of Polymer Biodegradation: Mathematical Modeling of Drug Release and Acid-Catalyzed Poly(ortho-ester) Biodegradation 214  
*A.G. Thombre, USA*

**Session 8: Selected poster communications**

High Cell Density Production of PHB Using Methanol in a Fed-batch System  
*D. Bourque, Y. Pomerleau, and D. Groleau, Canada*

Monitoring of Oligomer Formation during *in vitro* Hydrolytic Random Scission of Poly( $\beta$ -malic acid) Chains  
*C. Braud and M. Vert, France*

Potential Biodegradable Polyamides Based on Carbohydrates. II. Polyamides Derived from D-Glucose 237  
*M. Bueno, J.A. Galbis, M.G. García-Martin, M. de Paz, F. Zamora, J. Bou, and S. Muñoz Guerra, Spain*

Methodological Approach of Packaging Material Biodegradability 241  
*V. Coma, Y. Couturier, B. Pascat, G. Bureau, S. Guilbert, and J.-L. Cuq, France*

Composting Microbial Ecosystem for Testing the Biodegradability of Starch-filled Polyethylene Films 245  
*A. Corti, G. Vallini, A. Pera, F. Cioni, R. Solaro, and E. Chiellini, Italy*

Method Development for the Determination of the Degradability of Plastics: an Overview of Research Activities at Pira International 249  
*I.M. Gidman, N. Kirkpatrick, and P.J. Nichol, UK*

Biodegradability of Blends of Poly(3-hydroxybutyrate-co-3-hydroxyvalerate) with Ester-substituted Celluloses 251  
*D.F. Gilmore, N. Lotti, R.W. Lenz, R.C. Fuller, and M. Scandola, USA*

PHB - Part of a New Waste Management System <i>O. Hrabak, Austria</i>	255
Biodegradable L-Lactide- $\delta$ -Valerolactone Block Polymers: Synthesis and Properties <i>Z. Jedlinski, P. Kurcok, M. Kowalczyk, and J. Franek, Poland</i>	259
<i>In vivo</i> Degradation Mechanism of Massive Aliphatic Polyesters Derived from Lactic and Glycolic Acids <i>S.M. Li, H. Garreau, M. Vert, M. Therin, and P. Christel, France</i>	263
Microbial Flora Involved in the Biodegradation of Polyhydroxyalkanoates <i>J. Mergaert, A. Wouters, J. Swings, and K. Kersters, Belgium</i>	267
Potential Biodegradable Polyamides Based on Carbohydrate Derivatives. I. Polytartaramides <i>J.J. Bou, I. Iribarren, A Rodríguez-Galán and S. Muñoz-Guerra, Spain</i>	271
Degradation of Natural Rubber by Reaction with Oxygen in the Presence of Phenylhydrazine. Perturbation of Random Cleavage Process by Reaction at the Chain End <i>D. Reyx, I. Campistron, and A. El Hamdaoui, France</i>	275
Estimation Method of Biodegradability of Polymers in the Environment by a DNA Probe Method <i>Y. Uchida, Y. Kurusu, and H. Yukawa, Japan</i>	279
Biodegradable Materials: Thermoplastic Starch <i>M. Van der Zee, H. Tournois, J.W. Timmermans, and R.O.J. Jongboom, The Netherlands</i>	283
Hydrolytically Degradable Polyanhydrides Containing Amide, Ester, or Urethane Bonds in the Main Chain <i>K. Wermann and M. Hartmann, Germany</i>	285
Session 9: General conclusions. <i>G. Scott UK</i>	291
Subject Index	297
