Contributors	v
Preface to First Edition	xvii
Preface to Second Edition	xix
Part I General principles and techniques	1
1 Introduction	3
F.W. FIFIELD and P.J. HAINES	
1.1 Environmental science and analytical chemistry	3
1.2 Analytical chemistry	4
1.3 Overall analytical processes	6
1.3.1 Defining the aims of an analytical programme	7
1.3.2 Selection of an analytical method	7
1.3.3 Sampling, sample handling and pretreatment	7
1.3.4 Analytical measurements	10
1.3.5 Method validation and quality assurance	10
1.3.6 Data assessment and interpretation	11
1.3.7 Safety	
2 Analytical environmental data: assessment and interpretation	13
F.W. FIFIELD	
2.1 Introduction	13
2.2 Basic concepts and definitions	13
2.2.1 True result	13
2.2.2 Population	14
2.2.3 Statistical sample	14
2.2.4 Error	14
2.2.5 Accuracy	14
2.2.6 Precision	15
2.2.7 The range, or spread of data	15
2.2.8 Distribution curves	16
2.2.9 The mean	16
2.2.10 The mode	16
2.2.11 The median	16
2.2.12 Degrees of freedom	17
2.2.13 Standard deviation	17
2.2.14 The variance	18
2.2.15 Confidence levels and confidence limits	--
2.3 The nature and origin of errors	18
2.3.1 Types of errors	19
2.4 Frequency distributions	21
2.4.1 Normal and Student <i>t</i> distributions	22
2.4.2 Other distributions	23
2.5 Assessment and interpretation of analytical results	23
2.5.1 Introduction	23
2.5.2 Data reliability	23

CONTENTS

- 2.5.3 Precision comparisons
- 2.5.4 The assessment and comparison of means
- 2.5.5 Graphical methods
- 2.5.6 Detection limits

Self-study exercises
Answers

3 Chemical principles

P.J. HAINES

- 3.1 Introduction
 - 3.1.1 Periodicity
 - 3.1.2 Atomic spectra
 - 3.1.3 Nature of the electron
 - 3.1.4 Population of energy levels
- 3.2 Atomic orbitals and chemical bonds
 - 3.2.1 Ionic bonds
 - 3.2.2 Covalent molecules
 - 3.2.3 Polyatomic molecules
 - 3.2.4 Metal compounds and complexes
 - 3.2.5 Chains, rings and networks
- 3.3 Molecular energy levels
 - 3.3.1 Energy of assemblies of molecules
- 3.4 Enthalpies of formation and reaction
- 3.5 Entropy and free energy
- 3.6 Free energy and equilibrium
- 3.7 The effects of temperature
- 3.8 Application to equilibria
 - 3.8.1 Phase equilibria
 - 3.8.2 Ions in solution
 - 3.8.3 Solubility
 - 3.8.4 Acid-base equilibria
 - 3.8.5 Oxidation-reduction equilibria
 - 3.8.6 Electrochemical reactions
 - 3.8.7 Complexation
- 3.9 Reaction kinetics
- 3.10 Examples of reaction kinetics
 - 3.10.1 Radioactive reactions
 - 3.10.2 Ionic reactions
 - 3.10.3 Solid-state reactions
 - 3.10.4 Photochemical reactions
- 3.11 Summary

Further reading
Self-study exercises
Answers

4 Titrimetry and gravimetry

F.W. FIFIELD

- 4.1 Introduction
- 4.2 Titrimetry
 - 4.2.1 Introduction
 - 4.2.2 Acid-base titrations
 - 4.2.3 Complexometric titrations
 - 4.2.4 Redox titrations
- 4.3 Gravimetry
 - 4.3.1 Principles

4.3.2 Gravimetric procedures	88
Further reading	90
5 Separation techniques	91
F.W. FIFIELD	
5.1 Introduction	91
5.2 Solvent extraction	91
5.2.1 Introduction	91
5.2.2 Solvent extraction of analytes from environmental samples	91
5.2.3 Separation of mixtures by solvent extraction	92
5.3 Chromatography	96
5.3.1 Introduction	96
5.3.2 Characteristics of chromatograms	97
5.3.3 High-performance liquid chromatography	100
5.3.4 Ion-exchange chromatography	103
5.3.5 Thin-layer and paper chromatography	106
5.3.6 Gas chromatography	108
5.4 Electrophoresis	112
5.4.1 Introduction	112
5.4.2 Capillary electrophoresis (CE)	112
5.5 Other separation techniques	115
5.5.1 Supercritical fluid chromatography (SFC)	115
5.5.2 Gel permeation chromatography (GPC)	115
5.5.3 Distillation and volatilisation	115
5.5.4 Precipitation	116
Further reading	116
Self-study exercises	116
Answers	117
6 General principles of spectrometry	
P.J. HAINES	
6.1 Introduction	118
6.2 Energy levels	118
6.3 Types of transition	118
6.3.1 Lasers	119
6.4 Molecular dissociation	121
6.5 Electromagnetic radiation	122
6.6 The electromagnetic spectrum	124
6.7 Interaction of species with electromagnetic radiation	124
6.8 Absorption laws	128
6.9 Spectrometric instrumentation	129
6.9.1 Single-beam spectrometer	130
6.9.2 Double-beam spectrometer	131
6.9.3 Fourier-transform instruments	132
Further reading	133
7 Atomic spectrometry	
F.W. FIFIELD	
7.1 Introduction	134
7.2 Flame emission spectrometry	135
7.2.1 The chemical flame	135
7.3 Plasma emission spectrometry	138
7.3.1 Introduction	138
7.3.2 Inductively coupled plasma-atomic emission spectrometry (ICP-AES)	138

CONTENTS

- 7.4 Inorganic mass spectrometry
 - 7.4.1 Introduction
 - 7.4.2 Inductively coupled plasma-mass spectrometry (ICP-MS)
 - 7.5 X-ray emission techniques
 - 7.5.1 Introduction
 - 7.5.2 Electron probe microanalysis
 - 7.5.3 X-ray fluorescence spectrometry
 - 7.6 Atomic absorption spectrometry
 - 7.6.1 Introduction
 - 7.6.2 Sharp-line radiation
 - 7.6.3 AAS measurements
 - 7.6.4 Flame AAS
 - 7.6.5 Electrothermal AAS
 - 7.7 Atomic fluorescence spectrometry
 - 7.8 Use of atomic spectrometry
- Further reading
Self-study exercises
Answers

8 Molecular spectrometry

P.J. HAINES

- 8.1 Introduction
 - 8.2 Ultraviolet and visible spectrophotometry
 - 8.2.1 Instrumentation
 - 8.2.2 Band spectra
 - 8.2.3 Polyatomic organic molecules
 - 8.2.4 Solvent effects
 - 8.2.5 Metal complexes
 - 8.2.6 Applications
 - 8.2.7 UV fluorescence methods
 - 8.2.8 Combined separation and UV techniques
 - 8.3 Infrared spectrometry
 - 8.3.1 Sampling
 - 8.3.2 Infrared absorption
 - 8.3.3 Polyatomic molecules
 - 8.3.4 Combinations of infrared and separation techniques
 - 8.3.5 Applications of infrared spectrometry in environmental analysis
 - 8.4 Nuclear magnetic resonance spectrometry (NMR)
 - 8.4.1 Instrumentation
 - 8.4.2 Solvents for NMR work
 - 8.4.3 The chemical shift
 - 8.4.4 The peak area
 - 8.4.5 Spin-spin coupling
 - 8.4.6 Applications of NMR
 - 8.5 Mass spectrometry (MS)
 - 8.5.1 Instrumentation
 - 8.5.2 Isotopic composition and accurate masses
 - 8.5.3 Nitrogen rule
 - 8.5.4 Fragmentation
 - 8.5.5 Applications of mass spectrometry
 - 8.6 Structure elucidation
- Further reading
Self-study exercises
Answers

9 Measurement of ionising radiations and radionuclides

F.W. FIFIELD

9.1	Introduction	203
9.2	Ionising radiations and radioactivity	203
9.2.1	Alpha radiation (α)	204
9.2.2	Beta radiation (β^- or β^+)	204
9.2.3	Gamma radiation (γ)	205
9.2.4	Internal conversion (ic)	206
9.2.5	Radioactive decay	207
9.2.6	Units of radioactivity and radiation measurement	209
9.3	The detection and measurement of radiation	210
9.3.1	Gas ionisation detectors	211
9.3.2	Semiconductor detectors	212
9.3.3	Sodium iodide detectors	213
9.3.4	Organic scintillators	215
9.3.5	Liquid scintillation counting	215
9.3.6	Detection by films	217
9.3.7	The importance of autoradiographic techniques in environmental analysis	219
9.3.8	Concentration and separation of radionuclides	219
	Further reading	219

10 Electroanalytical techniques

E. BUCKLEY-DHOOT

10.1	Introduction	220
10.2	Electrochemical principles	220
10.3	Potentiometric techniques	222
10.3.1	Introduction and theory	222
10.3.2	Practical considerations and applications	224
10.3.3	Potentiometric titrations	233
10.3.4	Current developments	234
10.4	Voltammetric and controlled potential techniques	234
10.4.1	Introduction	234
10.4.2	Theory	235
10.4.3	Practical considerations and applications	236
10.4.4	Techniques	240
10.5	Electrochemical detection in flowing streams	246
10.5.1	Introduction	246
10.5.2	Potentiometric measurements in flowing streams	247
10.5.3	Voltammetric measurement in flowing streams	247
10.6	Other electroanalytical techniques	249
10.6.1	Introduction	249
10.6.2	Conductometry	249
10.6.3	Coulometry	250
10.6.4	Electrogravimetry	250
	Further reading	251
	Self-study exercises	251
	Answers	252

11 Thermal methods of analysis**253**

P.J. HAINES

11.1	Introduction	253
11.2	Definitions	253
11.3	General apparatus	254

- 11.4 Factors affecting thermal analysis results
 - 11.4.1 The sample
 - 11.4.2 The crucible
 - 11.4.3 The rate of heating (dT/dt)
 - 11.4.4 The atmosphere
 - 11.4.5 The mass of the sample
- 11.5 Thermogravimetry
 - 11.5.1 Apparatus
 - 11.5.2 Applications of thermogravimetry
- 11.6 Differential thermal analysis (DTA) and differential scanning calorimetry (DSC)
 - 11.6.1 Differential thermal analysis (DTA)
 - 11.6.2 Differential scanning calorimetry (DSC)
 - 11.6.3 Apparatus
 - 11.6.4 Applications
- 11.7 Thermomechanical analysis (TMA) and dynamic mechanical analysis (DMA)
 - 11.7.1 Apparatus
 - 11.7.2 Applications
- 11.8 Simultaneous techniques and product analysis
 - 11.8.1 Apparatus
 - 11.8.2 Evolved gas analysis (EGA)
 - 11.8.3 Analysis of products and reactions
 - 11.8.4 Recent advances in thermal analysis techniques
- 11.9 Environmental applications of thermal methods
 - 11.9.1 Geological materials
 - 11.9.2 Recycling
 - 11.9.3 Residues
 - 11.9.4 Vapourisation studies
 - 11.9.5 Flue gas treatment
 - 11.9.6 Purity
- 11.10 Summary
- Further reading
- Self-study exercises
- Answers

12 Biological indicators

R. MANLY

- 12.1 Introduction
- 12.2 Monitoring community structure
 - 12.2.1 Diversity indices
 - 12.2.2 Similarity indices
 - 12.2.3 Species abundance patterns
 - 12.2.4 Multivariate analyses
- 12.3 Bioindicator methods
 - 12.3.1 Biotic indices
 - 12.3.2 Pollutant mapping
 - 12.3.3 Biochemical indicators
 - 12.3.4 Morphological and histological indicators
 - 12.3.5 Detector and sentinel organisms
 - 12.3.6 Comparative methods
- 12.4 Microbiological monitoring
 - 12.4.1 Intrusive microorganisms and faecal contamination
- 12.5 Bioaccumulators
- 12.6 Bioassays
- Further reading

Part II Specific applications**13 Speciation**

G.L. CHRISTIE

13.1	The importance of speciation	309
13.2	Definition of speciation	309
13.3	The determination of trace metal speciation	309
13.3.1	Computer modelling	309
13.3.2	Experimental determination of speciation	314
13.4	Concluding remarks	324
	Further reading	325

14 The analysis of atmospheric samples 326

C.K. LAIRD

14.1	Introduction	326
14.2	Atmospheric analyses	327
14.2.1	Measurements of atmospheric composition	327
14.2.2	Emission measurements	327
14.2.3	Indoor and workplace atmospheres	328
14.3	Techniques for gas analysis	328
14.3.1	Gas chromatography	328
14.3.2	Spectrometric methods	328
14.3.3	Electrochemical sensors	336
14.3.4	Chemical methods and detector tubes	336
14.3.5	Diffusion tubes and diffusion denuder tubes	337
14.4	Sampling	339
14.4.1	Ambient air	339
14.4.2	Emissions	340
14.5	Calibration of gas analysers	341
14.6	Determination of the main air pollutants and oxygen	343
14.6.1	Carbon monoxide	343
14.6.2	Nitrogen oxides	344
14.6.3	Ozone	345
14.6.4	Sulphur dioxide	346
14.6.5	Volatile organic compounds	347
14.6.6	Oxygen	348
14.7	Determination of some other air pollutants	351
14.7.1	Methane	351
14.7.2	Chlorofluorocarbons	351
14.7.3	Organic nitrates	351
14.7.4	Nitrous oxide	352
14.7.5	Toxic organic micropollutants	352
14.7.6	Hydroxyl and hydroperoxyl radical	353
14.7.7	Combustible gases	353
14.8	Sampling and analysis of particles and aerosols	353
14.8.1	Sampling particles and aerosols	354
14.8.2	Particle and aerosol composition	359
	Further reading	359
	References	359

15 Trace elements 360

N.I. WARD

15.1	Trace elements in the environment	360
15.2	Natural levels and chemical forms	362

CONTENTS

- 15.3 Trace element contamination and pollution
 - 15.3.1 Air particulates
 - 15.3.2 Natural waters
 - 15.3.3 Soils and sediments
 - 15.3.4 Plants
 - 15.3.5 Animals and humans
- 15.4 Sampling and sample preparation
 - 15.4.1 Atmospheric samples
 - 15.4.2 Water samples
 - 15.4.3 Soils and sediments
 - 15.4.4 Plants
 - 15.4.5 Biological tissues and fluids
 - 15.4.6 Sample digestion methods
- 15.5 Methods of analysis
- 15.6 Selected important examples
 - 15.6.1 Lead
 - 15.6.2 Aluminium

Further reading

16 Environmental radiation and radioactivity

F.W. FIFIELD

- 16.1 Introduction
- 16.2 The hazards of ionising radiations and their assessment
- 16.3 Natural sources of radiation
 - 16.3.1 Radionuclides of geological origin
 - 16.3.2 Radionuclides resulting from cosmic rays
- 16.4 Artificial sources of radiation
 - 16.4.1 Radiation and radioactivity in research and medicine
 - 16.4.2 Nuclear power
- 16.5 Radiogenic dating
 - 16.5.1 Geological dating
 - 16.5.2 Carbon dating
 - 16.5.3 Tritium dating
 - 16.5.4 Lead-210 dating
 - 16.5.5 Thermoluminescence and electron spin resonance dating

Further reading

17 Contaminated landsites

F.W. FIFIELD

- 17.1 Introduction
- 17.2 The nature of contaminated sites
 - 17.2.1 Origins of contamination
 - 17.2.2 Physical characteristics of landsites
- 17.3 Assessments
 - 17.3.1 Investigational plan

Further reading

18 The analysis of water

F.W. FIFIELD

- 18.1 Introduction
- 18.2 pH, acidity and alkalinity
- 18.3 Dissolved oxygen and oxygen demand
- 18.4 Total organic carbon
- 18.5 Metals

18.6	Dissolved salts	425
18.7	Trace organics	426
18.8	Radioactivity and radionuclides in water	427
18.9	Water surveys and sampling	427
	Further reading	428

19 The determination of trace amounts of organic compounds

C.J. WELCH

19.1	Introduction	429
19.2	Sample preparation	431
19.2.1	Maceration, dissolution and extraction	432
19.2.2	Partition	433
19.2.3	Concentration of the analyte	436
19.3	Chromatography	437
19.3.1	Gas chromatography	438
19.3.2	High-performance liquid chromatography	439
19.3.3	Capillary (zone) electrophoresis	439
19.3.4	Quantitation	439
19.4	Screening analysis	440
19.5	GC applications: pesticide analysis	441
19.6	HPLC: trace analysis	443
19.7	HPLC applications	445
19.7.1	Aromatic hydrocarbons	445
19.8	GC/HPLC applications	446
19.8.1	Trace organic analysis in water	446
19.8.2	Analysis of organic materials in soil and sediments	449
19.8.3	Analysis of amines	449
	Further reading	450

20 Ecotoxicology

R. MANLEY

20.1	Introduction	452
20.2	Toxicant behaviour in living organisms	452
20.3	Dose-response relationships of toxicants	454
20.4	Toxicants and the environment	460
20.5	Toxicity testing	461
20.5.1	Bioassays	463
20.6	Ecological risk assessment	468
	Further reading	470
