# CONTENTS

<b>Preface</b>	<b>xvii</b>
<b>Introduction to Green Chemistry</b>	<b>xxv</b>
<b>PART I AIR AND ENERGY</b>	<b>1</b>
<b>CHAPTER 1 Stratospheric Chemistry: The Ozone Layer</b>	<b>3</b>
<b>Introduction</b>	<b>3</b>
Dobson Units for Overhead Ozone • The Annual Ozone Hole Above Antarctica • Ozone Depletion in Temperate Areas • Regions of the Atmosphere • Environmental Concentration Units for Atmospheric Gases	
<b>The Physics and Chemistry of the Ozone Layer</b>	<b>9</b>
Absorption of Light by Molecules • Filtering of Sunlight's UV Component by Atmospheric O <sub>2</sub> and O <sub>3</sub> • Biological Consequences of Ozone Depletion • Variation in Light's Energy with Wavelength • Creation of Ozone in the Stratosphere • Destruction of Stratospheric Ozone	
<b>The Steady State in Atmospheric Reactions</b>	<b>21</b>
The Steady-State Approximation • Steady-State Analysis of the Chapman Mechanism	
<b>Catalytic Processes of Ozone Destruction</b>	<b>27</b>
Catalytic Destruction of Ozone by Nitric Oxide • Box 1-1: The Rates of Free-Radical Reactions • Destruction of Ozone Without Atomic Oxygen by Other Mechanisms • Atomic Chlorine and Bromine as X Catalysts	
<b>The Ozone Hole and Other Sites of Ozone Depletion</b>	<b>36</b>
The Activation of Catalytically Inactive Chlorine • Reactions That Create the Ozone Hole • The Size of the Antarctic Ozone Hole • Stratospheric Ozone Destruction over the Arctic Region	

## Contents

- Increases in UV at Ground Level • Box 1-2: The Chemistry Behind Mid-Latitude Decreases in Stratospheric Ozone

### **The Chemicals That Cause Ozone Destruction** **48**

CFC Decomposition Increases Atmospheric Chlorine • Box 1-3: Formulas and Codes for Carbon Compounds (Including CFCs) • Other Chlorine-Containing, Ozone-Depleting Substances • **Green Chemistry:** The Replacement of CFC and Hydrocarbon Blowing Agents with Carbon Dioxide in Producing Foam Polystyrene • CFC Replacements • Bromine-Containing, Ozone-Depleting Substances • International Agreements That Restrict ODSs • **Green Chemistry:** Harpin Technology—Eliciting Nature's Own Defenses Against Diseases

### **CHAPTER 2 Ground-Level Air Pollution— Outdoors and Indoors** **66**

#### **Introduction** **66**

Concentration Units for Atmospheric Pollutants • The Chemical Fate of Trace Gases in Clean Air • Box 2-1: The Interconversion of Gas Concentrations

#### **Urban Ozone: The Photochemical Smog Process** **72**

The Origin and Occurrence of Smog • Nitrogen Oxides Production During Fuel Combustion • Ground-Level Ozone in Smog • Governmental Goals for Reducing Ozone Concentrations • Photochemical Smog Around the World • Limiting VOC and NO Emissions to Reduce Ground-Level Ozone • Catalytic Converters • Control of Nitric Oxide Emissions from Power Plants • Future Reductions of Smog-Producing Emissions • **Green Chemistry:** Replacement of Organic Solvents with Supercritical and Liquid Carbon Dioxide; Development of Surfactants for This Compound

#### **Acid Rain** **93**

Sulfur Dioxide and Hydrogen Sulfide Sources and Abatement • Clean Coal: Reducing Sulfur Dioxide Emissions from Power Plants

#### **The Ecological Effects of Acid Rain and of Photochemical Smog** **99**

Neutralization of Acid Rain by Soil • Release of Aluminum into Soil and Water Bodies by Acid Rain • Effect on Trees and Crops of Air Pollution

## Contents

<b>Molecular Vibrations: Energy Absorption by Greenhouse Gases</b>	<b>171</b>
<b>The Major Greenhouse Gases</b>	<b>173</b>
Carbon Dioxide: Absorption of Infrared Light • Carbon Dioxide: Past Concentration and Emission Trends • Carbon Dioxide: Atmospheric Lifetime and Fate of Its Emissions • <b>Green Chemistry</b> : Supercritical Carbon Dioxide in the Production of Computer Chips ■ Water Vapor: Its Infrared Absorption and Role in Feedback • The Atmo- spheric Window	
<b>Atmospheric Residence Time</b>	<b>187</b>
<b>Other Greenhouse Gases</b>	<b>191</b>
Methane: Absorption and Sinks • Methane: Emission Sources • Box 4-1: Determining the Emissions of "Old Carbon" Sources of Methane • Methane: Concentration Trend and Possible Future Increases • Nitrous Oxide • CFCs and Their Replace- ments * Sulfur Hexafluoride * Tropospheric Ozone	
<b>The Climate-Modifying Effects of Aerosols</b>	<b>202</b>
The Interaction of Light with Particles ■ Aerosols and Global Warming	
<b>Global Warming to Date</b>	<b>206</b>
Earth's Energy Balance ■ Effective CO <sub>2</sub> Concentration ■ Alloca- tion of Warming to Natural and Anthropogenic Factors • Global Warming: Chronology and Geography • Box 4-2: Cooling over China from Haze • Global Circulation Models • Other Signs of Global Warming	
<b>CHAPTER 5 Climate Change in the Future: Predictions, Consequences, and Controls</b>	<b>220</b>
<b>The Potential Consequences of Global Warming</b>	<b>220</b>
Predictions for Climate Change by 2100 • Predictions About Sea Levels • Climate Predictions for Specific Regions • Predicted Effects on Human Health	
<b>Energy Reserves and Usage</b>	<b>226</b>
Determinants of Growth in Energy Use • Energy Reserves: Coal • Energy Reserves: Petroleum and Natural Gas • <b>Green</b>	

**Chemistry:** Polylactic Acid—Biodegradable Polymers from Renewable Resources: Reducing the Need for Petroleum and the Impact on the Environment • Growth in Energy Use and Its Causes

**CO<sub>2</sub> Emission Scenarios and Agreements 236**

Patterns of Growth in CO<sub>2</sub> Concentrations • IPCC Scenarios for CO<sub>2</sub> Emissions and Concentrations • International Agreements on Greenhouse Gas Emissions

**Minimizing Future Emissions of Greenhouse Gases 241**

Carbon Intensity and Carbon Taxes • Sequestration of CO<sub>2</sub> • Removing CO<sub>2</sub> from the Atmosphere • Reducing CO<sub>2</sub> Emissions by Improving Energy Efficiency • Reducing Methane Emissions

**CHAPTER 6 Renewable Energy, Alternative Fuels, and the Hydrogen Economy 252**

**Renewable Energy 253**

Hydroelectric Power • Wind Energy • Biomass • Geothermal Energy • Wave and Tidal Power • Types of Direct Solar Energy • Using Thermal Conversion to Produce Electricity • Limitations on the Conversion of Energy: The Second Law of Thermodynamics • Solar Cells • Conclusions About Renewable Fuels and Solar Energy

**Alternative Fuels 267**

Gasoline • Octane Enhancers • Natural Gas and Propane (LPG) • Oxygenated Fuels: Methanol • Oxygenated Fuels: Ethanol • Alcohols and Ethers as Vehicular Fuels • MTBE as a Fuel Additive • Biofuels

**Hydrogen—Fuel of the Future? 283**

Combusting Hydrogen • Generating Electricity by Powering Fuel Cells with Hydrogen • Obtaining Fuel-Cell Hydrogen from Liquid Fuels • Electric Cars Powered by Batteries • Other Uses for Fuel Cells • Storing Hydrogen • Producing Hydrogen • Conclusions Concerning Hydrogen and Other Alternative Fuels

## Contents

<b>Environmental Instrumental Analysis 1: Instrumental Determination of NO<sub>x</sub> by Chemiluminescence</b>	<b>299</b>
<b>Environmental Instrumental Analysis 2: Instrumental Determination of Atmospheric Methane</b>	<b>302</b>
<b>PART II TOXIC ORGANIC CHEMICALS</b>	<b>305</b>
<b>CHAPTER 7 Pesticides</b>	<b>307</b>
<b>Background</b>	<b>307</b>
Types of Pesticides • Traditional Insecticides • Organochlorine Insecticides • Pesticides in Water	
<b>DDT</b>	<b>313</b>
DDT's Structure • Box 7-1: The History of DDT • DDE in Body Fat • Bans on DDT and Other Persistent Pollutants	
<b>The Accumulation of Organochlorines in Biological Systems</b>	<b>318</b>
Bioconcentration • Biomagnification • Analogs of DDT	
<b>Other Organochlorine Insecticides</b>	<b>323</b>
Toxaphene • Hexachlorinated Cyclohexane • Chlorinated Cyclopentadiene Insecticides	
<b>Principles of Toxicology</b>	<b>327</b>
Dose–Response Relationships • Risk Assessment	
<b>The Distribution of Environmental Pollutants</b>	<b>334</b>
An Example of a Fugacity Calculation • Model World Parameters for Fugacity Calculations	
<b>Organophosphate and Carbamate Insecticides</b>	<b>337</b>
Organophosphate Insecticides • Carbamate Insecticides • Health Problems of Organophosphates and Carbamates	

<b>Natural and Green Insecticides, and Integrated Pest Management</b>	<b>342</b>
Pesticides from Natural Sources • Integrated Pest Management • <b>Green Chemistry:</b> Insecticides That Target Only Certain Insects • <b>Green Chemistry:</b> A New Method for Controlling Termites	
<b>Herbicides</b>	<b>346</b>
Atrazine and Other Triazines • Chloroacetamides • Glyphosate • Phenoxy Herbicides	
<b>Summary</b>	<b>352</b>
<b>CHAPTER 8 Nonpesticide Toxic Organic Compounds of Environmental Concern</b>	<b>358</b>
<b>Dioxins</b>	<b>359</b>
Dioxin Production in the Preparation of 2,4,5-T • Dioxin Numbering System • Chlorophenols as Pesticides • Detecting Dioxins in Food and Water • Box 8-1: Deducing the Probable Chlorophenolic Origins of a Dioxin	
<b>PCBs</b>	<b>365</b>
The Structure of PCB Molecules • The Numbering Systems for PCBs • Commercial Uses of PCBs • PCBs Cycling Among Air, Water, and Sediments • PCB Contamination by Furans • Box 8-2: Predicting the Furans That Will Form from a Given PCB	
<b>Other Sources of Dioxins and Furans</b>	<b>376</b>
Pulp and Paper Mills • <b>Green Chemistry:</b> $\text{H}_2\text{O}_2$ , an Environmentally Benign Bleaching Agent for the Production of Paper • Fires and Incineration as Sources of Dioxins and Furans • Chlorine Content of Dioxin and Furan Emissions	
<b>The Health Effects of Dioxins, Furans, and PCBs</b>	<b>381</b>
Inadvertent PCB Poisonings • Effects of in Utero Exposure to PCBs • The Toxicity Patterns of Dioxins, Furans, and PCBs • The TEQ Scale • Dioxins, Furans, and PCBs in Food • Dioxins as Probable Human Carcinogens • Human Exposure to Dioxins, Furans, and PCBs	

## Contents

<b>Polynuclear Aromatic Hydrocarbons (PAHs)</b>	<b>393</b>
The Molecular Structure of PAHs • PAHs as Air Pollutants • PAHs as Water Pollutants • Formation of PAHs During Incomplete Combustion • Carcinogenic Properties of PAHs • Box 8-3: More on the Mechanism of PAH Carcino- genesis • Environmental Levels of PAHs and Human Cancer	
<b>Other Toxic Organics of Environmental Concern</b>	<b>402</b>
Insect Repellants • PBDEs: A New Persistent Pollutant • Perfluor- inated Sulfonates	
<b>Environmental Estrogens</b>	<b>405</b>
Mechanism of Action of Environmental Estrogens • The Chemicals That Operate as Environmental Estrogens • Effects of Environmen- tal Estrogens on Wildlife • Effects of Environmental Estrogens on Humans	
<b>The Long-Range Transport of Atmospheric Pollutants</b>	<b>413</b>
<b>Environmental Instrumental Analysis 3: Electron Capture Detection of Pesticides</b>	<b>420</b>
<b>PART III WATER</b>	<b>423</b>
<b>CHAPTER 9 The Chemistry of Natural Waters</b>	<b>425</b>
<b>Oxidation-Reduction Chemistry in Natural Waters</b>	<b>426</b>
Dissolved Oxygen • Oxygen Demand • <b>Green Chemistry</b> : Enzy- matic Preparation of Cotton Textiles • Decomposition of Organic Matter in Water • The pE Scale • pE-pH Diagrams • Sulfur Compounds in Natural Waters • Acid Mine Drainage • Nitrogen Compounds in Natural Waters	
<b>Acid-Base Chemistry in Natural Waters: The Carbonate System</b>	<b>442</b>
The CO <sub>2</sub> -Carbonate System • Water in Equilibrium with Solid Calcium Carbonate • Water in Equilibrium with Both CaCO <sub>3</sub> and Atmospheric CO <sub>2</sub>	

<b>Ion Concentrations in Natural Waters and Drinking Water</b>	<b>449</b>
The Abundant Ions in Fresh Water • Fluoride Ion in Water • Bottled Drinking Waters • Seawater • Alkalinity Indices for Natural Waters • The Hardness Index for Natural Waters • Aluminum in Natural Waters • Perchlorates	
<b>CHAPTER 10 The Pollution and Purification of Water</b>	<b>463</b>
<b>Water Disinfection</b>	<b>463</b>
Aeration of Water • Removal of Calcium and Magnesium • Box 10-1: Activated Carbon • Disinfection to Reduce Illnesses • Filtering of Water • Removal of Colloidal Particles by Precipitation • Disinfection by Membrane Technology • Disinfection by Ultraviolet Irradiation • Disinfection by Chemical Methods: Ozone and Chlorine Dioxide • Disinfection by Chlorination: History • Disinfection by Chlorination: Production of Hypochlorous Acid • Disinfection by Chlorination: By-Products and Their Health Effects • Box 10-2: The Mechanism of Chloroform Production in Drinking Water • Disinfection by Chlorination: Advantages over Other Methods	
<b>Groundwater: Its Supply, Chemical Contamination, and Remediation</b>	<b>478</b>
The Nature and Supply of Groundwater • The Contamination of Groundwater • Nitrate Contamination of Groundwater • Nitrates in Water • Health Hazards of Nitrates in Drinking Water • Nitrosamines in Food and Water • Groundwater Contamination by Organic Chemicals • The Ultimate Sink for Organic Contaminants in Groundwater • Decontamination of Groundwater: Pump-and-Treat • Decontamination of Groundwater: Bioremediation and Natural Attenuation • Decontamination of Groundwater: In Situ Remediation	
<b>The Chemical Contamination and Treatment of Wastewater and Sewage</b>	<b>494</b>
Sewage Treatment • The Origin and Removal of Excess Phosphate • Box 10-3: Time Dependence of Concentrations in the Two-Step Oxidation of Ammonia • <b>Green Chemistry:</b> Sodium Iminodisuccinate—A Biodegradable Chelating Agent • Reducing the Salt Concentration in Water • The Biological Treatment of	

## Contents

Wastewater and Sewage • Drugs in Wastewater from Sewage Treatment Plants • The Treatment of Cyanides in Wastewater • The Disposal of Sewage Sludge

## **Modern Wastewater and Air Purification Techniques 507**

The Destruction of Volatile Organic Compounds • Advanced Oxidation Methods for Water Purification • Photocatalytic Processes • Other Advanced Oxidation Methods

## **CHAPTER 11: Toxic Heavy Metals 516**

### **Introduction 516**

Speciation and the Toxicity of Heavy Metals • Bioaccumulation of Heavy Metals

### **Mercury 519**

Mercury Vapor • Mercury Amalgams • Mercury and the Industrial Chlor-Alkali Process • The  $2+$  Ion of Mercury • Methylmercury Toxicity • Methylmercury Accumulation in the Environment and in the Human Body • Other Sources of Methylmercury • The Use of Mercury in Preservatives and as Medications • Safe Levels of Mercury in the Body

### **Lead 530**

Elemental Lead as an Environmental Risk • Ionic  $2+$  Lead in Water and Food as an Environmental Hazard to Humans • Lead Salts as Glazes and Pigments • **Green Chemistry:** Replacement of Lead in Electrodeposition Coatings • Dissolution of Otherwise Insoluble Lead Salts • Ionic  $4+$  Lead in Automobile Batteries • Tetravalent Organic Lead Compounds as Gasoline Additives • Environmental Lead from Leaded Gasoline • Lead's Effects on Human Reproduction and Intelligence

### **Cadmium 542**

Environmental Sources of Cadmium • Human Intake of Cadmium • Protection Against Low Levels of Cadmium

### **Arsenic 545**

Arsenic(III) Versus Arsenic(V) Toxicity • Anthropogenic Sources of Arsenic to the Environment • Box 11-1: Organotin Compounds • Arsenic in Drinking Water • Drinking Water Standards for

Arsenic • Removal of Arsenic from Water • Steady State of Arsenic in Water • Arsenic in Organic and Other Molecular Forms

**Chromium 554**

Chromium Contamination of Water • The Wood Preservative CCA • Green Chemistry: Removing the Arsenic and Chromium from Pressure-Treated Wood

**Environmental Instrumental Analysis 4: Inductively Coupled Plasma Determination of Lead 562**

**Environmental Instrumental Analysis 5: Ion Chromatography of Environmentally Significant Anions 565**

**PART IV SOME OTHER ENVIRONMENTAL CONCERNS 569**

**CHAPTER 12 Hazardous and Municipal Wastes, and the Contamination of Soils and Sediments 571**

**Domestic and Commercial Garbage: Its Disposal and Minimization 571**

Burying Garbage in Landfills • Stages in the Decomposition of Garbage in a Landfill • Leachate from a Landfill • Incineration of Garbage • Green Chemistry: Polyaspartate—A Biodegradable Antiscalant and Dispersing Agent

**The Recycling of Household and Commercial Waste 581**

The Recycling of Metals and Glass • The Recycling of Paper • The Recycling of Tires • The Recycling of Plastics • Ways of Recycling Plastics • Green Chemistry: Development of Recyclable Carpeting • Life Cycle Assessments

**Soils and Sediments 591**

Basic Soil Chemistry • The Acidity and Cation-Exchange Capacity of Soil • Soil Salinity • Sediments • The Binding of Heavy Metals to Soils and Sediments • Mine Tailings • The Remediation of Contaminated Soil • Box 12-1: The Superfund Program • The Analysis and Remediation of Contaminated Sediments

## Contents

- Bioremediation of Wastes and Soil • Bioremediation of Organochlorine Contamination • Phytoremediation of Soils and Sediments

### **Hazardous Wastes 614**

- The Nature of Hazardous Wastes • The Management of Hazardous Wastes • Toxic Substances • Incineration of Toxic Waste
- Supercritical Fluids • Nonoxidative Processes

### **CHAPTER 13 Radioactivity, Radon, and Nuclear Energy 626**

#### **Radioactivity and Radon Gas 626**

- The Nature of Radioactivity • The Health Effects of Ionizing Radiation • Quantifying the Amount of Radiation Energy Absorbed
- Radioactive Nucleus Decay • Radon from the Uranium-238 Decay Sequence • Measuring the Rate of Disintegration and Health Threat from Environmental Radiation • Box 13-1: Steady-State Analysis of the Radioactive Decay Series • The Daughters of Radon • Measuring the Health Danger from Radon and Its Daughters • Depleted Uranium • Dirty Bombs

#### **Nuclear Energy 637**

- Fission Reactors • Environmental Problems of Uranium Mining and Refining • The Future of Fission-Based Nuclear Power • The Catastrophe at Chernobyl • The Accident at Three Mile Island
- Plutonium and the Problem of Nuclear Waste • Box 13-2: Radioactive Contamination by Plutonium Production • Fusion Reactors
- The Energy Released in Nuclear Processes

### **Appendix: Background Organic Chemistry AP-1**

### **Answers to Selected Odd-Numbered Problems AN-1**

### **Index I-1**
