

CONTENTS

Preface	xv		
PART 1 BASIC KNOWLEDGE AND PRACTICES			
Chapter Effect of Wastes on Watercourses and Wastewater Treatment Plants	3		
1.1 Effects on streams	3		
1.2 Effects on wastewater treatment plants	7		
1.3 Differences between industrial and municipal wastes	9		
1.4 Environmental impact statements of industrial wastes	11		
Chapter 2 Stream Protection Measures	17		
2.1 Standards of stream quality	17		
2.2 Stream quality control	19		
2.3 Effluent guidelines	24		
Chapter 3 Computation of Organic Waste Loads on Streams	53		
3.1 Streeter–Phelps formulations	53		
3.2 Thomas method for determining pollution-load capacity of streams	56		
3.3 Churchill method of multiple linear correlation	65		
Chapter 4 Stream and Groundwater Sampling	71		
Chapter 5 Economics of Waste Treatment	77		
5.1 Benefits of pollution abatement	79		
5.2 Measurement of benefits	80		
5.3 A proposed method for resource allocation	80		
5.4 Costs of waste treatment	88		
5.5 Marketing wastes and environmental resources	91		
5.6 Dollar benefit of using adjacent production by industrial plants	92		
PART 2 THEORIES			
Chapter 6 Volume Reduction	99		
6.1 Classification of wastes	99		
6.2 Conservation of wastewater	99		
6.3 Changing production to decrease wastes	100		
		6.4 Reusing both industrial and municipal effluents for raw water supplies	100
		6.5 Elimination of batch or slug discharges of process wastes	103
		Chapter 7 Contaminant Concentration Reduction	107
		7.1 Process changes	107
		7.2 Equipment modifications	108
		7.3 Segregation of wastes	108
		7.4 Equalization of wastes	109
		7.5 By-product recovery	109
		7.6 Proportioning wastes	110
		7.7 Monitoring waste streams	110
		7.8 Accidental spills	110
		Chapter 8 Neutralization	113
		8.1 Mixing wastes	113
		8.2 Limestone treatment for acid wastes	114
		8.3 Lime-slurry treatment for acid wastes	114
		8.4 Caustic-soda treatment for acid wastes	114
		8.5 Using waste boiler-flue gas	116
		8.6 Carbon-dioxide treatment for alkaline wastes	116
		8.7 Producing carbon dioxide in alkaline wastes	116
		8.8 Sulfuric-acid treatment for alkaline wastes	117
		8.9 Acid-waste utilization in industrial processes	117
		Chapter 9 Equalization and Proportioning	119
		9.1 Equalization	119
		9.2 Proportioning	120
		Chapter 10 Removal of Suspended Solids	123
		10.1 Sedimentation Theory	123
		10.2 Design of sedimentation process units	126
		10.3 Flotation	131
		10.4 Screening	133
		Chapter 11 Removal of Colloidal Solids	139
		11.1 Characteristics of colloids	139
		11.2 Chemical coagulation	139
		11.3 Coagulation by neutralization of the electrical charges	140

11.4	Removal of colloids by adsorption	142	Chapter 15	Industrial Complexing for Zero Pollution Attainment	201
Chapter 12	Removal of Inorganic Dissolved Solids	145	15.1	Definition	201
12.1	Evaporation	145	15.2	Objectives	201
12.2	Dialysis	146	15.3	Industrial complex principle and concerns	201
12.3	Ion exchange	147	15.4	Some examples of complexes	202
12.4	Algae	148	15.5	Tannery complex	202
12.5	Reverse osmosis	149	15.6	Sugarcane complex	206
12.6	Miscellaneous methods	151	15.7	Pulp and papermill complex	207
12.7	Refractories	152	15.8	Textile complex	212
Chapter 13	Removal of Organic Dissolved Solids	155	15.9	Fertilizer-cement complex	215
13.1	Lagooning	155	15.10	Steel mill-fertilizer-cement complex	223
13.2	Activated-sludge treatment	157	15.11	Fossil-fueled power plant complexes	223
13.3	Modified aeration	159	15.12	Reduction in production and environmental costs	226
13.4	Dispersed-growth aeration	160			
13.5	Contact stabilization	161	PART 3	APPLICATIONS	
13.6	High-rate aerobic treatment	162	Chapter 16	Joint Treatment of Raw Industrial Wastes with Domestic Sewage	231
13.7	Trickling filtration	163	16.1	Industrial use of municipal sewage plants	236
13.8	Spray irrigation	165	16.2	Municipal ordinances	238
13.9	Wet combustion	165	16.3	Sewer-rental charges	241
13.10	Anaerobic digestion	166	16.4	Existing situation	244
13.11	Mechanical aeration system	168	16.5	Stream survey	246
13.12	Well injection	168	16.6	Composite waste sampling	254
13.13	Foam phase separation	170	16.7	Composite waste analyses	254
13.14	Brush aeration	171	16.8	Laboratory pilot-plant studies	255
13.15	Subsurface disposal	171	16.9	Literature survey	257
13.16	The bio-disc system	171	16.10	Conclusions from study	260
13.17	Biological treatment design	174	16.11	Overall planning study conclusions	262
13.18	Collection and reclamation (scavenging)	178	16.12	Solids handling	265
13.19	Chemical oxidation of organic matter	179	16.13	Final design of the Gloversville-Johnstown joint sewage treatment plant	
13.20	Miscellaneous (ozonization, photolysis, pure oxygen, etc.)	179	16.14	Estimated costs and financing	
Chapter 14	Treatment and Disposal of Sludge Solids	185	16.15	Application of the plan in practice	
14.1	Anaerobic and aerobic digestion	185	Chapter 17	Industrial and Municipal Waste Facilities Requiring Proper Closure	
14.2	Vacuum filtration	187	17.1	Introduction	
14.3	Elutriation	188	17.2	Site Description	
14.4	Drying beds	189	17.3	Problems and Conditions	
14.5	Sludge lagooning	190	17.4	Alternate solutions considered	
14.6	The wet combustion process	191	17.5	Selected solution	
14.7	Atomized suspension	192	17.6	Statutory determinations	
14.8	Drying and incineration	192	17.7	Lessons learned	
14.9	Centrifuging	194	17.8	Background	
14.10	Sludge barging	196	17.9	Site description	
14.11	Sanitary landfill	196	17.10	Site history	
14.12	Transporting sludges to approved landfills	197	17.11	Site characteristics	
14.13	Miscellaneous methods	197			

17.12	The selected remediation	278	Chapter 21	Discharge of Completely Treated Wastes to Streams or Land	327
17.13	Description of remedial alternatives	278	21.1	The problem	327
17.14	Discussion	279	21.2	Stream studies	329
17.15	State of California closure requirements	279	21.3	State decision	329
17.16	Future considerations	280	21.4	Poultry-waste characteristics	329
17.17	Design/cost analysis	280	21.5	The solution	330
17.18	Lessons learned	282	21.6	Results	333
			21.7	An example	335
Chapter 18	Discharge of Completely Treated Wastes to Municipal Sewer Systems	285	Chapter 22	Stream Discharge of Chemical Plant Waste After Complete Treatment	345
18.1	The sampling program	286	22.1	Introduction	345
18.2	Analyses of wastes	286	22.2	Background	345
18.3	Plant-production study	286	22.3	Waste description	345
18.4	Suggested in-plant changes to reduce waste	287	22.4	Waste character and quality	345
18.5	City wastewater treatment plant	291	22.5	Post treatment effluents	347
18.6	Toxic limits for metals	293	22.6	Lessons learned	349
18.7	Treatment of industrial wastes	293	Chapter 23	Hazardous Waste Disposal Sites and Superfund Sites	351
Chapter 19	Complete Treatment Followed by Discharge to Receiving Watercourse—Moench Tannery and Closing of Glue Plant	299	23.1	Background	351
19.1	History of problem	299	23.2	Chemicals of concern	353
19.2	Waste character and treatment	300	23.3	Hazardous materials disposal	353
19.3	Preliminary and primary treatment	301	23.4	Identification of contamination	353
19.4	Existing treatment plant efficiency	301	23.5	Regulatory history	353
19.5	Cattaraugus Creek pollution situation	301	23.6	Addressing the problem	354
19.6	Corporate relationship in the community	303	23.7	Underground storage tanks	359
19.7	In-plant studies	303	23.8	Remediation technologies	360
19.8	Biodegradability of glue-plant wastes	307	Chapter 24	Industrial Site Contamination—Case Studies	363
19.9	Pilot-plant experimental data	307	24.1	Background	363
19.10	Preliminary design	309	24.2	Timeline of events (1955 to 1992)	363
19.11	Final decision of glue plant	309	24.3	Soil and groundwater contamination	372
19.12	Characteristics of Tannery Wastes	309	24.4	Review and analysis of Hope's remediation costs	372
19.13	Laboratory prototype results	310	24.5	Lessons learned	373
19.14	Field pilot plant results	310	24.6	Introduction	373
19.15	Treatment solution and methods selected	311	24.7	Background on lead smelting	374
19.16	Design and performance of treatment plant	311	24.8	Background on smelter waste chemistry	375
19.17	Significant design and operation considerations	312	24.9	The study	376
			24.10	Lessons learned	378
Chapter 20	Discharge of Partially Treated Industrial Waste Directly to Streams	315	PART 4 MAJOR INDUSTRIAL WASTES		
20.1	Procedure	316	Introduction	381	
20.2	River studies	317	Chapter 25	The Apparel Industries	387
20.3	Pilot-plant results	319	25.1	Origin and characteristics of textile wastes	387
20.4	Substitution of soluble sizing	322	25.2	Treatment of textile wastes	390
			25.3	Final waste treatment	396
			25.4	Origin and characteristics of tannery wastes	403

25.5	Treatment of tannery wastes	403	27.13	Glass-industry wastes	506
25.6	Origin and characteristics of laundry wastes	409	27.14	Metal-container wastes	507
25.7	Treatment of laundry wastes	410	27.15	Porcelain enameling industry	509
25.8	Dry cleaning wastes	411	27.16	Naval-stores wastes	511
Chapter 26	Food Industries	413	27.17	Animal-glue manufacturing wastes	512
26.1	Introduction	413	27.18	Wood-preservation wastes	516
26.2	Origin of cannery wastes	414	27.19	Candle-manufacturing wastes	517
26.3	Characteristics of cannery wastes	414	27.20	Plywood-plant glue wastes	517
26.4	Treatment of cannery wastes	414	27.21	Cement industry	518
26.5	Origin and characteristics of dairy wastes	420	27.22	Wood furniture and fixture manufacturing	520
26.6	Treatment of dairy wastes	421	27.23	Asbestos wastes	520
26.7	Origin of brewery, distillery, winery, and pharmaceutical wastes	423	27.24	Paint and printing ink wastes	521
	Characteristics of brewery, distillery, winery, and pharmaceutical wastes	423	Chapter 28	Chemical Industries	523
26.9	Treatment of brewery, distillery, winery, and pharmaceutical wastes	425	28.1	Acid wastes	523
	Origin and characteristics of meat-packing wastes	427	28.2	Cornstarch-industry wastes	526
26.11	Treatment of meat-packing wastes	430	28.3	Phosphate-industry wastes	529
26.12	Feedlot wastes	432	28.4	Soap- and detergent-industry wastes	
26.13	Origin and characteristics of beet-sugar wastes	435	28.5	Explosives-industry wastes	
26.14	Treatment of beet-sugar wastes	435	28.6	Formaldehyde wastes	542
26.15	Cane sugar wastes	436	28.7	Pesticide wastes	544
26.16	Coffee wastes	438	28.8	Plastic and resin wastes	546
26.17	Rice wastes	441	28.9	Fertilizer industry wastes	552
26.18	Fish wastes	442	28.10	Toxic chemicals	
26.19	Pickle and olive wastes	443	28.11	Mortuary science wastes	
26.20	Soft-drink bottling wastes	444	28.12	Hospital and laboratory wastes	
26.21	Bakery wastes	445	28.13	Polychlorinated biphenyls	
26.22	Water pollution control	445	28.14	Chloralkali wastes	
26.23	Agricultural wastes	446	28.15	Organic Chemicals	
26.24	Palm oil wastes	447	Chapter 29	Energy Industries	
Chapter 27	The Materials Industries	451	29.1	Steam power plants	
27.1	Pulp- and paper-mill wastes	451	29.2	Scrubber wastes	
27.2	Builders paper and roofing felt manufacturing waste	466	29.3	The coal industry	
27.3	Photographic wastes	466	Chapter 30	Radioactive Wastes	591
27.4	Steel-mill wastes	467	30.1	Origin of wastes	592
27.5	Other metal-plant wastes	474	30.2	Nuclear power-plant wastes	592
27.6	Metal-plating wastes	480	30.3	Fuel-processing wastes	594
27.7	Motor industry wastes	487	30.4	Treatment of radioactive wastes	596
27.8	Iron-foundry wastes	490	30.5	Cost of radioactive-waste treatment	617
27.9	Oil-field and refinery wastes	491	Chapter 31	Non-point Source Pollution	619
27.10	Petrochemicals	499	31.1	Introduction	619
27.11	Fuel and lub-oil wastes	501	31.2	Land non-point wastes	619
27.12	Rubber wastes	502	31.3	Urban non-point street wastes	621
			31.4	Leachate from landfill sites	622
			Chapter 32	Hazardous Wastes	625
			32.1	Definitions	625
			32.2	Dangers	625

Scope of problems and costs of solutions	625	32.45	Special treatments for hazardous wastes	646
32.4 Effects on environment	626	32.46	General treatment	646
32.5 Philosophies of solutions	627	32.47	Segregation	647
32.6 Varied types of industrial hazardous wastes	628	32.48	Location of facilities	648
32.7 Ignitable hazardous wastes	628	32.49	Treatment required-risk evaluation	649
32.8 Waste oils	631	32.50	Land treatment	650
32.9 Spent oil emulsions	632	32.51	Thermal treatment	651
32.10 Other oily wastes	632	32.52	Incineration	652
32.11 Oily shipboard waste or refinery sludges	633	32.53	Chemical, physical and/or biological treatment	655
Corrosive hazardous wastes	633	32.54	Neutralization	658
Acid wastes	633	32.55	Underground injection	658
Alkaline wastes	633	32.56	Landfarming	659
Reactive industrial wastes	633	32.57	Disposal in natural storage areas	660
Wastes containing cyanides and isocyanides	633	32.58	Permanent landfills	660
Sulfide residues	634	32.59	Ocean dumping	662
Oil refinery sludges	634	32.60	Secure burial, reuse, chemical fixation	662
Trihalomethanes	634	32.61	Exportation	663
EP toxic industrial wastes	634	32.62	Recovery and reuse	664
Mercury-containing wastes	634	32.63	Copper recovery from plating and/or engraving baths	664
Metal containing sludge	635	32.64	Spent caustic soda regeneration	665
Other inorganic wastes	635	32.65	Mercury recovery	665
Pickling liquors	635	32.66	Cadmium recovery	665
Galvanizing and metal plating wastes	635	32.67	Silver recovery from plating and photographic wastes	665
Graphic and photographic waste liquors	636	32.68	Waste oil recovery	666
Salts	636	32.69	Solvents recovery	666
Phosphatic fertilizer sludges and ore extraction wastes	636	32.70	Water recovery and reuse from industrial laundries	667
Ore extraction wastes	637	32.71	Dye recovery and reuse from textile wastes	667
Power plants	637	32.72	Detoxification	668
Nitrogenous fertilizers	637	32.73	Regional exchanges of hazardous wastes	671
Wood preserving wastes	637	32.74	Solar evaporation	675
Acute hazardous industrial wastes	637	32.75	Landfilling with leachate treatment	675
Radioactive wastes	637	32.76	Disposal into publically owned wastewater treatment plants	675
Biological wastes	640	32.77	Membrane technology	675
Hospital wastes	640	32.78	Electrochemical treatment	676
Biological wastes and other contaminants	641	32.79	Legal aspects of industrial hazardous wastes	679
Asbestos-laden wastes	642	32.80	Superfund	679
Toxic industrial wastes	642	32.81	Industrial insurance	696
Organic-laden wastes	643	32.82	Illegal dumping	696
PCB-laden oil/PCB-containing wastes	643	32.83	Storage of hazardous industrial wastes	697
Phenols and formaldehydes	644	32.84	Transportation and spill prevention of industrial hazardous wastes	698
Spent solvents	645			
Organic wastes containing halogens, sulfur, and nitrogen	646			

32.85	Spills	698	Appendix G	Town of Hillsborough	730
Appendix A	National Standards of Performance	703	Appendix H	New Jersey Surface Water Quality Criteria	732
Appendix B	National Pollutant Discharge Systems (NPDES)	705	Appendix I	Florida Surface Water Quality Classifications	740
Appendix C	Reference List of USEPA Effluent Guidelines Documents	707	Appendix J	EPA Effluent Guidelines	741
Appendix D	EPA Hazardous Waste List	709	Appendix K	Sewer Use Ordinance	742
Appendix E	Waste Disposal Site Survey	710			
Appendix F	Pennsylvania Solid Waste Management Act	719		Index
