Preface	page xv
Contributors	xvi
1. General sampling techniques	1
1.1 Sampling goals and requirements	1
1.1.1 Ambient sampling	1
1.1.1.1 <i>General objectives</i>	1
1.1.1.2 <i>Meteorological considerations</i>	2
1.1.1.3 <i>Sampling site criteria</i>	7
1.1.1.4 <i>Sample scheduling</i>	8
1.1.2 Source sampling	11
1.1.2.1 <i>General objectives</i>	11
1.1.2.2 <i>Stationary source sampling</i>	11
1.1.2.3 <i>Mobile source sampling</i>	22
√ 1.2 Sampling methods	25
1.2.1 General sampling system considerations	25
1.2.1.1 <i>Intake and transfer component</i>	25
1.2.1.2 <i>Collection component</i>	26
1.2.1.3 <i>Flow measurement component</i>	27
1.2.1.4 <i>Air moving component</i>	29
1.2.2 Aerosols	30
1.2.2.1 <i>Aerosol sampling considerations</i>	30
1.2.2.2 <i>Aerosol sampling collection components</i>	38
1.2.2.3 <i>Ambient aerosol sampling applications</i>	44
1.2.2.4 <i>Emission source aerosol sampling applications</i>	52
1.2.3 Gases	63
1.2.3.1 <i>Gas sampling considerations</i>	63
1.2.3.2 <i>Gas sampling collection components</i>	64
1.2.3.3 <i>Ambient gas sampling applications</i>	70
1.2.3.4 <i>Emission source gas sampling applications</i>	75
References	79

2. Analysis of particulate pollutants	84
2.1 Introduction	84
2.1.1 Emission of particulate matter	85
2.1.2 Emission factors for particulate matter	85
2.1.3 Dispersion of atmospheric pollutants from a point source	88
2.1.3.1 <i>Plume rise</i>	89
2.1.3.2 <i>Dispersion of the plume</i>	89
2.1.3.3 <i>Worked example</i>	93
2.1.3.4 <i>Problems of short-term sampling</i>	94
2.1.4 Deposition of particulate matter from chimney stacks	95
2.1.4.1 <i>Worked example</i>	99
2.1.5 Relevant meteorological instruments	99
2.2 Suspended material	104
2.2.1 Sampling techniques	104
2.2.1.1 <i>Filter paper techniques</i>	104
2.2.2 Determination of total particulate pollutant concentrations	108
2.2.2.1 <i>Light reflectance method</i>	108
2.2.2.2 <i>Gravimetric techniques</i>	110
2.2.2.3 <i>Other filter paper devices</i>	110
2.2.2.4 <i>Mass monitors</i>	113
2.2.3 Cascade impactors	114
2.2.4 Light scattering techniques	116
2.2.4.1 <i>The integrating nephelometer</i>	116
2.2.4.2 <i>Aerosol particle counters</i>	117
2.2.5 The directional sampler	119
2.3 Dustfall sampling	120
2.3.1 Introduction	120
2.3.2 Designs of national deposit gauges	122
2.3.2.1 <i>The British Standard deposit gauge</i>	122
2.3.2.2 <i>French Standard deposit gauge</i>	123
2.3.2.3 <i>Norwegian N.I.L.U. deposit gauge</i>	123
2.3.3 Short-term surveys	125
2.3.3.1 <i>Single bowl surveys</i>	126
2.3.3.2 <i>Larger surveys</i>	126
2.3.4 British Standard directional deposit gauge	128
2.4 Physical techniques for classification of particulates	130
2.4.1 Density gradient separation	130
2.4.1.1 <i>Density gradient liquids</i>	131
2.4.1.2 <i>Recovery and cleaning of liquids</i>	131
2.4.1.3 <i>Preparation of the gradient</i>	132
2.4.2 Dispersion staining	136

2.4.3	Microscopic techniques	139
2.4.3.1	<i>Mounting samples</i>	140
2.4.3.2	<i>Identification of dusts and reference library</i>	141
2.4.3.3	<i>Description of dusts from different combustion and industrial sources</i>	141
2.4.3.4	<i>Dust identification table</i>	146
2.4.4	Determination of asbestos	146
2.4.4.1	<i>Membrane filter method</i>	148
2.4.4.2	<i>Infrared technique for ambient atmospheres</i>	149
2.4.5	Determination of particle size distribution	150
2.4.5.1	<i>Sieve techniques</i>	150
2.4.5.2	<i>Microscope techniques</i>	151
	References	155
✓ 3.	Metal analysis	157
3.1	Introduction	157
✓ 3.2	Analysis of particulate matter	157
3.2.1	General sampling considerations	157
3.2.2	Analytical methods involving no pretreatment of the sample	161
3.2.2.1	<i>X-Ray fluorescence spectroscopy</i>	161
3.2.2.2	<i>Radioactivation methods</i>	166
3.2.3	Methods involving pretreatment of the samples	170
3.2.3.1	<i>Emission spectrography</i>	170
3.2.3.2	<i>Ring oven methods</i>	174
3.2.3.3	<i>Polarography</i>	178
3.2.3.4	<i>Anodic stripping voltametry</i>	181
3.2.3.5	<i>Spark source mass spectrometry</i>	183
3.2.3.6	<i>Spectrophotometry and fluorometry</i>	185
3.2.3.7	<i>Atomic absorption spectrometry</i>	191
3.2.3.8	<i>Other analytical methods</i>	202
✓ 3.3	Gases and vapours	204
3.3.1	General sampling considerations	204
3.3.2.1	<i>Metal carbonyls</i>	205
3.3.2.2	<i>Hg and its compounds</i>	209
3.3.2.3	<i>Volatile Pb compounds</i>	213
	References	218
4.	Nitrogen and sulphur compounds	225
4.1	Introduction	225
4.2	Basic analytical techniques	228
4.2.1	Sampling techniques	229
4.2.2	Analytical methods — chemical	230

viii · CONTENTS

4.2.2.1	<i>Acidimetric methods</i>	230
4.2.2.2	<i>Colorimetric methods</i>	231
4.2.2.3	<i>Coulometric methods</i>	232
4.2.2.4	<i>Miscellaneous chemical methods</i>	234
4.2.3	Physical methods	235
4.2.3.1	<i>Chemiluminescence</i>	235
4.2.3.2	<i>Fluorescence</i>	237
4.2.3.3	<i>Absorption spectroscopy</i>	238
4.2.3.4	<i>Gas chromatography</i>	239
4.3.4.5	<i>Other physical methods</i>	240
4.3	Experimental section	240
4.3.1	Analysis of SO ₂	240
4.3.1.1	<i>Chemical methods</i>	241
4.3.1.2	<i>Physical analysis of SO₂</i>	249
4.3.2	Analysis of SO ₃	254
4.3.3	Analysis of H ₂ S	255
4.3.3.1	<i>Chemical methods</i>	255
4.3.3.2	<i>Physical methods</i>	259
4.3.4	Analysis of organic S compounds	259
4.3.4.1	<i>Chemical methods</i>	259
4.3.4.2	<i>Physical methods</i>	262
4.3.5	Analysis of oxides of nitrogen – NO and NO ₂	263
4.3.5.1	<i>Chemical methods</i>	263
4.3.5.2	<i>Physical methods</i>	271
4.3.6	Analysis of NH ₃	274
4.3.6.1	<i>Chemical methods</i>	274
4.3.6.2	<i>Physical methods</i>	278
4.3.7	Miscellaneous N ₂ compounds	278
4.3.8	Preparation of standard gas mixtures for calibration	279
4.3.8.1	<i>Preparation of standard mixtures by static methods</i>	280
4.3.8.2	<i>Preparation of standard mixtures by dynamic methods</i>	281
4.4	Particulate compounds of S and N	284
4.4.1	Analysis of SO ₄ ²⁻	284
4.4.1.1	<i>Experimental procedure for SO₄²⁻ (turbidimetric)</i>	285
4.4.2	Analysis of NO ₃ ⁻	286
4.4.2.1	<i>Experimental procedure for NO₃⁻ (colorimetric)</i>	287
4.4.3	Analysis of NH ₄ ⁺ salts	288
4.4.3.1	<i>Experimental procedure for NH₄⁺ (colorimetric)</i>	288

→	5. Secondary pollutants	292
	5.1 Introduction	292
	5.2 Basic analytical techniques for the analysis of gaseous secondary pollutants	296
	5.2.1 Sampling methods	297
	5.2.2 Analytical techniques	297
	5.2.2.1 <i>Chemical methods</i>	297
	5.2.2.2 <i>Physical methods</i>	299
	5.3 Experimental section	303
	5.3.1 Analysis of 'total oxidants'	303
	5.3.1.1 <i>Discussion of analytical methods</i>	303
	5.3.1.2 <i>Neutral KI method for manual analyses of 'total oxidants'</i>	305
	5.3.1.3 <i>Instruments for measurements of total oxidants</i>	308
	5.3.2 Analysis of O ₃	309
	5.3.2.1 <i>Chemical methods</i>	311
	5.3.2.2 <i>Physical methods</i>	313
	5.3.2.3 <i>Measurement of O₃ by the C₂H₄-chemiluminescence method</i>	316
	5.3.2.4 <i>Preparation of O₃/air mixtures for calibration purposes</i>	319
	5.3.3 Analysis of H ₂ O ₂	321
	5.3.3.1 <i>Chemical methods</i>	321
	5.3.3.2 <i>Physical methods</i>	322
	5.3.4 Analysis of aliphatic aldehydes and oxygenated compounds	322
	5.3.4.1 <i>Chemical methods</i>	322
	5.3.4.2 <i>A colorimetric analysis of total aliphatic aldehydes in air (MBTH method)</i>	323
	5.3.4.3 <i>Colorimetric analysis of HCHO (chromotropic acid method)</i>	326
	5.3.4.4 <i>Physical methods</i>	327
	5.3.5 Analysis of PAN and related compounds	328
	5.3.5.1 <i>Chemical methods</i>	328
	5.3.5.2 <i>Physical methods</i>	328
	5.3.5.3 <i>Analysis of PAN by electron capture GC</i>	331
	5.3.6 Analysis of oxyacids of N	335
	5.3.6.1 <i>Chemical methods</i>	335
	5.3.6.2 <i>Physical methods</i>	336
	References	337
	6. Hydrocarbons and carbon monoxide	340
	6.1 Introduction	340
	6.2 Sampling of volatile hydrocarbons	343
	6.2.1 Principles of sampling procedures	343
	6.2.2 Apparatus and methods for gas sampling	344

6.2.3	Cryogenic systems	347
6.2.4	Adsorption techniques	350
6.3	Sampling of particulate matter	351
6.4	Analysis of volatile hydrocarbons	351
6.4.1	Low molecular weight hydrocarbons (C ₁ –C ₅)	352
6.4.2	Higher molecular weight hydrocarbons (C ₆ –C ₂₀)	356
6.4.3	Mass spectrometry	359
6.4.4	Routine instrumental methods	360
6.4.4.1	<i>Gas chromatography</i>	360
6.4.4.2	<i>Spectroscopic methods</i>	360
6.4.5	Methods for specific compounds	362
6.4.5.1	<i>Ethylene</i>	362
6.4.5.2	<i>Benzene</i>	362
6.4.6	Calibration methods	362
6.4.6.1	<i>Static procedures</i>	363
6.4.6.2	<i>Dynamic procedures</i>	363
6.4.6.3	<i>Permeation and diffusion tubes</i>	363
6.4.6.4	<i>Capillary restricted flow</i>	364
6.5	Analysis of CO	364
6.6	Analysis of the organic fraction of airborne particulate matter	366
6.6.1	Separation of organic fractions and analysis by liquid chromatography	367
6.6.2	Analysis by high pressure liquid chromatography (HPLC)	368
6.6.3	Analysis by thin layer chromatography (TLC)	369
6.6.4	Analysis by gas liquid chromatography	369
