

<b>Preface</b>	<b>xiii</b>
<b>1 Elements of the Air Pollution Problem</b>	<b>1</b>
1.1 Air Pollution System	1
* 1.2 Air Pollutants	4
1.3 Atmospheric Aspects of Air Pollution	9
* 1.4 Effects of Air Pollution	11
1.4.1 Effects of Air Pollution on Atmospheric Properties	11
1.4.2 Effects of Air Pollution on Materials	15
1.4.3 Effects of Air Pollution on Vegetation	16
1.4.4 Effects of Air Pollution on Human Health	16
* 1.5 Air Quality Standards versus Emissions Standards	27
1.6 Emission Level–Air Quality Models	32
1.6.1 Types of Models	32
1.6.2 Temporal Resolution of Models	35
1.6.3 Spatial Resolution of Models	37
1.6.4 Model Requirements as Related to Ambient Air Quality Standards	38

1.7	Systems Analysis of Air Pollution Abatement	39
1.8	Summary	48
<b>* 2</b>	<b>Origin and Fate of Air Pollutants</b>	<b>52</b>
2.1	Sulfur-containing Compounds	55
2.1.1	Origin and Fate of Sulfur-containing Compounds	55
2.1.2	Urban Concentrations of Sulfur Compounds	61
✓ 2.2	Carbon Monoxide	67
2.2.1	Origin and Fate of Carbon Monoxide	67
2.2.2	Urban Concentrations of Carbon Monoxide	72
2.3	Nitrogen-containing Compounds	73
2.3.1	Origin and Fate of Nitrogen-containing Compounds	73
2.3.2	Urban Concentrations of Nitrogen Oxides	75
✓ 2.4	Hydrocarbons	76
2.4.1	Origin and Fate of Hydrocarbons	76
2.4.2	Urban Concentrations of Hydrocarbons	80
2.5	Particulate Matter	81
2.5.1	Origin of Particulate Matter	82
2.5.2	Urban and Background Particulate Matter	88
2.6	Summary	94
<b>✓ 3</b>	<b>Air Pollution Meteorology</b>	<b>100</b>
3.1	Atmospheric Energy Balance	101
3.1.1	Radiation	101
3.1.2	Energy Balance for Earth and Atmosphere	109
3.2	Temperature in the Lower Atmosphere	112
3.2.1	Pressure and Temperature Relationships in the Lower Atmosphere	114
3.2.2	Temperature Changes of a Rising (or Falling) Parcel of Air	117
3.2.3	Atmospheric Stability	119
3.3	Winds	125
3.4	Air Pollution and Global Climatic Change	134
<b>✓ 4</b>	<b>Air Pollution Chemistry</b>	<b>142</b>
4.1	Atmospheric Photochemical Reactions	143
4.2	Reactions of Nitrogen Oxides in the Urban Atmosphere	148
4.2.1	Basic Photochemical Cycle of $\text{NO}_2$ , $\text{NO}$ , and $\text{O}_3$	149
4.2.2	Additional Reactions in the System of $\text{NO}_x$ , $\text{H}_2\text{O}$ , $\text{CO}$ , and Air	156
4.3	Reactions of Hydrocarbons in the Urban Atmosphere	159
4.3.1	Mechanisms of Oxidation of Hydrocarbons in Air Pollution	160

4.3.2	Mechanisms of Oxidation of Oxygenated Hydrocarbons in Air Pollution	167
4.3.3	Free-radical Reactions	169
4.4	Photochemical Smog	171
4.4.1	Qualitative Kinetic Mechanism for Photochemical Smog	176
4.4.2	Abatement of Photochemical Smog	184
4.5	Reactions of Sulfur Oxides in the Urban Atmosphere	187
4.5.1	Catalytic Oxidation of $\text{SO}_2$	187
4.5.2	Photochemical Oxidation of $\text{SO}_2$	190
4.6	Aerosol Processes in the Urban Atmosphere	194
4.6.1	Aerosol Source Inventory	195
4.6.2	Dynamic Processes Affecting Aerosols	198
4.7	Measurement Methods for Gaseous Air Pollutants	205
4.7.1	Accuracy and Primary Standards	206
4.7.2	Precision	207
4.7.3	Sampling Procedures	208
4.7.4	Analytical Techniques Available for Measuring Air Pollutants	208
<b>5</b>	<b>Micrometeorology</b>	<b>220</b>
5.1	Basic Equations of Atmospheric Fluid Mechanics	221
5.2	Turbulence	227
5.3	Equations for the Mean Quantities	229
5.4	Mixing-Length Models for Turbulent Transport	232
5.5	Variation of Wind with Height in the Atmosphere	236
5.5.1	Mean Velocity in the Surface Layer in Adiabatic Conditions	237
5.5.2	Effects of Temperature on the Surface Layer	239
5.5.3	Wind Profiles in the Nonadiabatic Surface Layer	249
5.5.4	Wind Speed Variation in the Planetary Boundary Layer	251
5.6	Meteorological Measurements Important in Air Pollution	254
<b>6</b>	<b>Atmospheric Diffusion</b>	<b>260</b>
6.1	General Description of Turbulent Diffusion	260
6.1.1	Eulerian Approach	261
6.1.2	Lagrangian Approach	264
6.1.3	Comparison of Eulerian and Lagrangian Approaches	267
6.2	Equations Governing the Mean Concentration of Species in Turbulence	267
6.2.1	Eulerian Approaches	267
6.2.2	Conditions for Validity of Equation (6.4) (Lamb, 1973)	269
6.2.3	Lagrangian Approaches	272

6.2.4	Derivation of a Differential Equation for $\langle c(\mathbf{x}, t) \rangle$ from the Basic Lagrangian Equation (6.10)	280
6.2.5	Comparison of the Differential Equations for the Mean Concentrations from the Eulerian and Lagrangian Points of View	286
6.3	Solutions of the Atmospheric Diffusion Equation	294
6.4	Statistical Theories of Turbulent Diffusion	302
6.4.1	Qualitative Features of Atmospheric Diffusion	303
6.4.2	Motion of a Single Particle Relative to a Fixed Axis	306
6.4.3	Relative Diffusion of Two Particles	313
6.5	Similarity Theory for Diffusion in the Atmospheric Surface Layer	317
6.5.1	Neutral Surface Layer (Cermak, 1963; Batchelor, 1964)	320
6.5.2	Diabatic Surface Layer (Gifford, 1962)	320
6.6	Summary of Atmospheric Diffusion Theories	321
6.7	Emission Level-Air Quality Models	333
6.7.1	Inert and Linearly Reactive Contaminants	335
6.7.2	Reactive Contaminants	340
6.7.3	Model Validation	342

✓7 **Combustion Processes and the Formation of Gaseous and Particulate Pollutants** 352

7.1	Internal Combustion Engine	352
7.1.1	Operation of Internal Combustion Engines	352
7.1.2	Crankcase Emissions	356
7.1.3	Evaporative Emissions	356
7.1.4	Exhaust Hydrocarbon Emissions	358
7.1.5	Exhaust Particulate Emissions	369
7.2	Formation of Oxides of Nitrogen during Combustion Processes	372
7.2.1	Formation of NO from $N_2$ - $O_2$ Mixtures	372
7.2.2	Nitric Oxide Formation in the Internal Combustion Engine	374
7.2.3	Nitric Oxide Formation in Stationary Combustion	384
7.3	Particulate Emissions from Stationary Sources	386
7.4	Stationary Sources of Sulfur Oxides	391

✱✓8 **Air Pollution Control Principles** 397

8.1	Internal Combustion Engine	398
8.1.1	United States Motor Vehicle Emission Standards	398
8.1.2	Crankcase Emission Control	402
8.1.3	Evaporative Emission Control	403
8.1.4	Exhaust Emission Control	405
8.1.5	Systems Capable of Meeting the 1976 Emissions Standards	418

8.2	Removal of Gaseous Pollutants from Effluent Streams	420
8.2.1	Absorption of Gases by Liquids	420
8.2.2	Adsorption of Gases on Solids	432
✓ 8.2.3	Removal of SO <sub>2</sub> from Gases	439
8.2.4	Removal of NO <sub>x</sub> from Gases	441
8.3	Additional Control Techniques for Gaseous Pollutants from Stationary Sources	443
✓ 8.3.1	Sulfur Dioxide Emissions	443
8.3.2	Nitrogen Oxides Emissions	445
8.4	Principles of Particulate Emission Control Techniques	447
8.4.1	Drag on a Sphere in Steady Motion Through a Fluid	449
8.4.2	Particle Motion in a Rotating Fluid	451
8.4.3	Aerodynamic Capture of Particles	454
8.4.4	Electrostatic Precipitation	458
8.5	Particulate Emission Control Equipment	463
8.5.1	Settling Chambers	463
8.5.2	Cyclone Separators	464
8.5.3	Wet Collectors	466
8.5.4	Fabric Filters	471
8.5.5	Electrostatic Precipitators	472
8.5.6	Calculation of Total Efficiencies of Particulate Control Devices	473
8.5.7	Summary of Particulate Emission Control Techniques	473
	<b>Appendixes</b>	<b>483</b>
A	Statistical Description of Turbulence	483
A.1	Some Definitions	483
A.2	Fourier Transforms	486
A.3	Energy Spectrum	490
B	Plume Rise	495
B.1	Buoyant Plumes in a Calm Atmosphere	496
B.1.1	Dimensionless Analysis (Batchelor, 1954)	497
B.1.2	Morton, Taylor, and Turner's Approach (1956)	501
B.2	Forced Plumes in a Calm Atmosphere	505
B.3	Plume Rise in a Windy Atmosphere	506
B.4	Plume Rise Formulas Compared with Observations	510
	<b>Index</b>	<b>515</b>
