Introduction	1
SECTION 1 TECHNIQUES TO MEASURE GASEOUS POLLUTANTS AT AMBIENT CONCENTRATIONS	
1. Role of Gas Chromatography in Air Pollution Monitoring	17
2. Applications of chemiluminescence to the Measurement of Gaseous Pollutants	43
3. Diode Lasers for Pollutant Monitoring	55
4. A Chemiluminescent Approach to measurement of Strong Acid Aerosols	71
5. A New Techniques to measure Sulfuric Acid in the Atmosphere	85
6. A Comparative Review of Open-Path Absorption Methods for Ambient Air Pollutants	107
SECTION II TECHNIQUES TO MEASURE CHEMICAL AND PHYSICAL PROPERTIES OF PARTICLES IN THE ATMOSPHERE	
7. Application of X-Ray Fluorescence Techniques to measure Elemental Composition of Particles in the Atmosphere	123
8. An Instrument for Continuous Monitoring of Nitrate in Atmospheric Particulate	147
9. Application of an oscillating Quartz Crystal to Measure the Mass of Suspended Particulated Matter	163
SECTION III TECHNIQUES TO MEASURE POLLUTANTS FROM STATIONARY AND MOBILE SOURCES	
10. Cross-stack Measurement of Pollutant Concentrations Using Gas-Cell Correlation Spectroscopy	193
11. Absorption Spectroscopy Applied to stationary Source Emissions Monitoring	233
12. Remote Sensing of SO ₂ in Power Plant Plumes Using Ultraviolet Absorption and Infrared Emission Spectroscopy	245
13. A Review of Available Techniques for Coupling Continuous Gaseous Pollutant Monitors to Emission sources	267
14. Application of a beta Gauge to the measurement of Mass Emissions in a Coal-Fired Power Plant	285
