

## CONTENT

	Page
Preface	vii
1. Waste Characteristics and Treatment Methods	1
Analysis of Data	5
Waste Treatment Processes	7
Transfer and Rate Mechanisms	9
Biochemical Oxygen Demand	10
2. Principles of Biological Oxidation	14
BOD Removal and Sludge Growth	16
Summary of Bio-oxidation Kinetics	28
Bio-oxidation of Pure Compounds	33
Character of Biological Sludge	34
Oxygen Utilization	39
Sludge Production and Oxidation	53
Nutritional Requirements	61
Effect of Temperature	67
Effect of pH	69
3. Theory and Practice of Aeration	76
Oxygen Saturation	76
Theory of Oxygen Transfer	78
Stream Aeration	82
Bubble Aeration	86
Measurement of Oxygen Transfer Coefficients	95
Diffused Aeration	97
Mechanical Aeration	112
4. Stream and Estuary Analysis	122
Oxygen Demands	123
Oxygen Resources	128
Oxygen Balance in Streams	131
Oxygen Balance in Estuaries	135
5. Solid – Liquid Separation	152
Sedimentation	152
Zone Settling and Compression	167
Flotation	179
6. Aerobic Biological Treatment Processes	188
Lagoons and Stabilization Basins	188
Activated Sludge	203
Trickling Filters	221
7. Anaerobic Biological Treatment Processes	248
Theory	248
Digestion Design	252
Anaerobic Decomposition of Industrial Wastes	264
8. Sludge Handling and Disposal	270
Sludge Drying Beds	270
Vacuum Filtration	273
