PART I TECHNOLOGY DESCRIPTIONS

EXECUTIVE SUMMARY	3
Purpose and Scope	3
Legislative and Regulatory Overview	3
In Situ Treatment Technologies	4
Soil Flushing	4
Solidification and Stabilization	4
Degradation	6
Chemical Degradation	6
Biodegradation	7
Photolysis	7
Control of Volatile Materials	7
Chemical and Physical Separation Techniques	7
Delivery and Recovery Systems	8
Time Frame	8
1. INTRODUCTION	9
1.1 Purpose	9
1.2 Background	9
1.3 Special Considerations for In Situ Treatment	10
1.4 Overview of the Handbook	10
2. LEGISLATIVE AND REGULATORY OVERVIEW	11
2.1 Comprehensive Environmental Response, Compensation, and Liability Act	11
2.2 Superfund Amendments and Reauthorization Act	11
2.3 National Contingency Plan	12

3. TECHNOLOGIES FOR IN SITU TREATMENT	15
3.1 Soil Flushing	15
3.1.1 Status of the Technology	16
3.1.2 Secondary Impacts	18
3.1.3 Equipment, Exogenous Reagents, and Information Required.	18
3.1.4 Advantages of Soil Flushing.	19
3.1.5 Disadvantages of Soil Flushing.	19
3.2 Solidification and Stabilization	19
3.2.1 Solidification/Stabilization Techniques	20
3.2.1.1 Status of the Technology	22
3.2.1.2 Secondary Impacts	23
3.2.1.3 Equipment, Exogenous Reagents, and Information Required.	23
3.2.1.4 Advantages of Solidification/Stabilization	25
3.2.1.5 Disadvantages of Solidification/Stabilization	25
3.2.2 In Situ Vitrification	25
3.2.2.1 Status of the Technology	26
3.2.2.2 Secondary Impacts	26
3.2.2.3 Equipment, Exogenous Reagents, and Information Required.	26
3.2.2.4 Advantages of In Situ Vitrification.	26
3.2.2.5 Disadvantages of In Situ Vitrification.	27
3.3 Degradation	27
3.3.1 Chemical Degradation	27
3.3.1.1 Chemical Oxidation	27
Soil-Catalyzed Reactions.	28
Addition of Oxidizing Agents	30
3.3.1.2 Chemical Reduction	33
Addition of Reducing Agents to Treat Organic Chemicals	34
Addition of Reducing Agents to Treat Chromium	36
Addition of Reducing Agents to Treat Selenium	38
3.3.1.3 Chemical Dechlorination Reactions	39
Acurex Process	39
PPM Process	40
Alkali Polyethylene Glycolate (APEG) Process	40
3.3.1.4 Polymerization.	43
3.3.2 Biological Degradation	44
3.3.2.1 Enhancement of Biochemical Mechanisms.	46
Colloidal Gas Aphrons	46
Modification of Soil Properties to Optimize Environmental Conditions	48
Addition of Nonspecific Organic Amendments	57
3.3.2.2 Augmentation with Acclimated or Mutant Microorganisms	60
3.3.2.3 Application of Cell-Free Enzymes	64
3.3.2.4 Vegetation Uptake	65
3.3.2.5 Case Histories of Bioremediation	67

	Formaldehyde Rail Car Spill, Ukiah, California	67
	Phenol-Contaminated Site in Michigan	68
	Biocraft Site, Waldwick, New Jersey	68
	Naval Air Engineering Center (NAEC) Site, Lakehurst, New Jersey	69
	Gasoline-Contaminated Site	70
	Kelly Air Force Base (KAFB) Waste Disposal Site, Texas	70
	Skrydstrup Chemical Waste Disposal Site, Denmark	71
	Petrol Station, Asten, The Netherlands	72
	Jet-Fuel Spill Site, Eglin Air Force Base, Florida	73
	Phenolic Resin Plant, U.S.A.	73
	Trichloroethane Spill Site, New Jersey	73
3.3.3	Photolysis	76
3.3.3.1	Addition of Photoenhancement Agents	83
3.3.3.2	Enhancement of Volatilization	85
3.4	Control of Volatile Materials	86
3.4.1	Soil Vapor Extraction	86
3.4.1.1	Vacuum Extraction	86
3.4.1.2	Steam Stripping	89
3.4.2	Radio Frequency Heating	91
3.4.2.1	Status of the Technology	92
3.4.2.2	Secondary Impacts	92
3.4.2.3	Equipment, Exogenous Reagents, and Information Required	92
3.4.2.4	Advantages of Radio Frequency Heating	92
3.4.2.5	Disadvantages of Radio Frequency Heating	93
3.4.3	Soil Cooling	93
3.4.3.1	Status of the Technology	93
3.4.3.2	Secondary Impacts	94
3.4.3.3	Equipment, Exogenous Reagents, and Information Required	94
3.4.3.4	Advantages of Soil Cooling	94
3.4.3.5	Disadvantages of Soil Cooling	94
3.5	Chemical and Physical Separation Techniques	94
3.5.1	Permeable Barriers	94
3.5.1.1	Status of the Technology	98
3.5.1.2	Secondary Impacts	98
3.5.1.3	Equipment, Exogenous Reagents, and Information Required	98
3.5.1.4	Advantages of Permeable Barriers	98
3.5.1.5	Disadvantages of Permeable Barriers	98
3.5.2	Electrokinetics	98
3.5.2.1	Status of the Technology	99
3.5.2.2	Secondary Impacts	100
3.5.2.3	Equipment, Exogenous Reagents, and Information Required	100
3.5.2.4	Advantages of Electrokinetics	101

3.5.2.5 Disadvantages of Electrokinetics	101
3.5.3 Ground Freezing	101
3.5.3.1 Status of the Technology	102
3.5.3.2 Secondary Impacts	102
3.5.3.3 Equipment, Exogenous Reagents, and Information Required.	103
3.5.3.4 Advantages of Ground Freezing.	103
3.5.3.5 Disadvantages of Ground Freezing.	103
4. DELIVERY AND RECOVERY SYSTEMS.	104
4.1 Hydraulic Fracturing	104
4.2 Radial Well Drilling	105
4.3 Ultrasonic Methods	106
4.4 Kerfing	107
4.5 Jet-Induced Slurry Method	107
4.6 Carbon Dioxide Injection	108
4.7 Hot Brine Injection	109
4.8 Cyclic Pumping.	110
REFERENCES	111
BIBLIOGRAPHY	133
APPENDIX A—MODIFICATION OF SOIL PROPERTIES	151
Introduction.	151
Control of Oxygen Content.	151
Moisture Control.	153
Irrigation.	153
Drainage	154
Well Points.	155
Additives.	155
Nutrient Additions to the Soil	155
Control of Soil pH.	156
Modification of Soil Temperature.	157

**PART II
BACKGROUND INFORMATION**

1. INTRODUCTION	162
2. MONITORING.	163
Introduction.	163
Statistical Considerations	163
Soils Sampling in the Treatment Zone and in the Underlying Unsaturated Zone.	164
Soil Pore Liquid Sampling in the Unsaturated Zone	166
Water Samples from the Saturated Zone	167
Runoff Water Monitoring	168

Air Monitoring	171
References	172
3. CHARACTERIZATION AND EVALUATION OF FUNDAMENTAL PROCESSES IN SOIL/WASTE SYSTEMS	174
Site and Soil Factors Related to In Situ Treatment	174
Introduction	174
Site Characterization Related to Off-Site Migration	176
Site Location and Topography	176
Soil Characteristics	179
Soil Classification	179
Slope	190
Soil Profile Properties	190
Soil Horizons	190
Boundary Characteristics	190
Depth	190
Soil Texture	193
Soil Structure	194
Color	194
Mottles	197
Bulk Density	197
Type and Amount of Soil Colloids	197
Clays and Organic Matter	197
Inorganic Soil Colloids	197
Organic Colloids	204
Soil pH	206
Oxidation-Reduction Potential	206
Nutrient Status	209
Hydraulic Properties of the Soil Profile	210
Off-Site Migration in Air	217
Geological and Hydrogeological Factors	217
Meteorological and Climatological Data	219
The Receiver System	220
Site Characteristics with Regard to In Situ Treatment	
Techniques	222
Site Characterization Related to Physical Execution	
of In Situ Treatment Technology	222
Sources of Information	223
Waste Characterization Related to In Situ Soil Treatment	224
Introduction	224
Definition of Hazard and Degree of Hazard	225
Preliminary Waste Identification	229
Chemical Analysis of the Wastes	230
Waste Characteristics Related to Soil Treatment	231
Statistical Considerations	234
Immobilization of Chemical Constituents as Related to In Situ	
Treatment	234
Inorganics	234

Fate of Metals in Soils	239
Solution Chemistry	241
Solid Phase Formation	242
Heavy Metal Complexation in Soil Solution	243
Computer Simulation of the Soil Solution	248
Solid-Aqueous Interface Exchange (Outer Sphere Complexes)	249
Specific Adsorption (Inner Sphere Complexes)	250
Factors Affecting Sorption	250
Effect of Anions	250
Effect of pH on Sorption	252
Effect of Other Cations Present in Solution	254
Oxidation-Reduction	256
Adsorption Isotherms.	256
Anions in the Soil Environment	259
Chromium	261
Mercury.	264
Arsenic	265
Selenium	267
Silver	267
Beryllium.	267
Soil Sorption—Organics	268
Ionic Compounds	273
Nonionic Compounds.	280
Quantitative Description of Adsorption	286
Adsorption Equilibrium	286
Nonequilibrium Adsorption.	293
Factors Affecting Sorption	295
Nonsingularity of Adsorption-Desorption.	297
Soil Microbiological Factors Related to In Situ Treatment.	299
The Soil Microbial Ecosystem	299
Physical and Chemical Properties	299
The Bacteria.	302
The Fungi	302
Algae	303
Higher Life Forms	303
Microbial Interactions	303
Life on the Verge of Starvation	304
Biogeochemistry of Toxic Metals and Metalloids	305
Arsenic	305
Barium	305
Cadmium.	305
Chromium	306
Lead	307
Mercury.	307
Nickel	308
Selenium	308

Silver	309
Vanadium	309
Decomposition of Xenobiotic Organic Compounds	309
The Role of Microorganisms	309
Genetic Engineering	310
Effect of Structure	310
Cometabolism	311
Degradation of Organic Pesticides	312
Degradation of Polychlorinated Biphenyls (PCBs)	317
Degradation of Aromatic Hydrocarbons	318
Degradation of Phthalic Acid Esters	318
Degradation of Substituted Benzenes	318
Quantitative Description of Organic Decomposition	318
Initial Concentration	321
Temperature	321
Moisture Content	327
Chemical Reactions in the Soil Matrix	328
Introduction	328
Effects of Waste Type on Soil Properties	329
Acidic Wastes	329
Basic Wastes	331
Salts	331
Solvents	332
Surfactants	334
Desorption	336
Soil Catalysis	339
Polymerization	341
Modeling the Behavior of Waste Constituents in Soil Systems	341
Transport Models	341
Limitations	348
Atmospheric Aspects of In Situ Treatment: Volatilization and Photodegradation	351
Volatilization of Organics	351
Volatilization of Organic Contaminants	351
Equilibrium Chemical Partitioning	353
Dynamic Vapor Movement Models	355
Volatilization from an Adsorbing Surface	355
Contaminant Advection	356
Vapor Transport from Hazardous Waste Sites	357
Factors Controlling Contaminant Volatilization	363
Compound Photoreactivity	365
Photolysis in Soils	366
Photolysis in Air	367
Biological Interactions	370
References	373
