	Page
1. Background	1
1.1 Introduction	1
1.2 Objectives	2
1.3 Ground water quality	3
1.4 Subsurface and Contaminant Properties Affecting Fate and Transport	8
2. Hydrodynamic Processes	13
2.1 Introduction	13
2.2 Solute Transport Equation	19
2.3 Permeability, Saturation and Hysteresis	35
2.4 Effects of Density	39
2.5 Multiphase Flow	39
2.6 Flow and Transport in Unsaturated Zone	44
2.7 Fractured Media Flow	45
3. Abiotic Processes	55
3.1 Introduction	55
3.2 Sorption / Desorption	56
3.3 Cosolvation / Ionization	83
3.4 Ion Exchange	91
3.5 Oxidation / Reduction Reactions	100
3.6 Hydrolysis	109
3.7 Speciation : Dissolution and Precipitation	112
4. Biotic Process	125
4.1 Introduction	125
4.2 Fundamentals of Microbiology	126
4.3 Subsurface Microbiology	138
4.4 Subsurface Metabolic Processes	139
4.5 Rates of Subsurface Metabolic Processes	189
4.6 Subsurface Transport of Microorganisms	194
5. Physical Models of Contaminant Transport	207
5.1 Introduction	207
5.2 Objectives of Microcosm Studies	208
5.3 Classification of Microcosms	209
5.4 Examples of Utilized Microcosms	210
5.5 Advantages and Limitations of Microcosm Studies	232
5.6 Designing a Microcosm Study	233
5.7 Issues and Concerns	234
5.8 Innovations in Microcosm Technology	235
5.9 Other Physical Models	236
6. Empirical Models and Vulnerability Mapping	243
6.1 Introduction	243
6.2 Wellhead Protection (Environmental management Support, Inc. 1989)	244
6.3 Context of Vulnerability Mapping	247
6.4 Agricultural DRASTIC Index	249
6.5 Soil / Aquifer Field Evaluation (SAFE)	253
6.6 Other Vulnerability Mapping Techniques	260
6.7 Pesticide Evaluations	262
6.8 Examples of Vulnerability Mapping	272

6.9	Ground water Protection Strategies in Vulnerable Areas	276
6.10	Limitations and Needs Relative to Vulnerability Mapping	279
6.11	Summary	280
7.	Modeling Subsurface Transport and Fate Processes	283
7.1	Introduction	283
7.2	Purposes for Model Usage	284
7.3	Governing Equation	284
7.4	Types of Models	296
7.5	Applications	320
7.6	Overview Studies of Models	326
7.7	Limitations of Models	340
7.8	Selection of Appropriate Model	343
7.9	Conclusions	346
8.	Applications of Transport and Fate Information	353
8.1	Introduction	353
8.2	Tracer Studies	355
8.3	Ground Water Monitoring and Remediation	359
8.4	Case Studies – Inorganics	367
8.5	Case Studies – Organics	378
Appendix A	Physical, Chemical, and Fate Data for Priority Pollutants	393
Appendix B	Example Statistical Calculations	405
Index		409
