Preface	iii
Contributors	ix
 Part I : ENGINEERING ISSUES IN WASTE REMEDIATION	
1. Ethical Responsibilities of Environmental Engineers	1
2. Risk Assessment in the Remediation of Hazardous Waste Sites	9
3. Practical Consideration During Bioremediation	39
4. Engineering Aspects of Bioremediation	55
5. Application of Genetic Engineering to the Field of Bioremediation	77
6. Applications of Environmental Biotechnology to Bioremediation	97
7. Computer-Assisted Site Characterization : Environmental Data Management, Analysis, and Visualization	125
 Part II : SPECIFIC CASE STUDIES IN HYDROCARBON REMEDIATION	
8. Biodegradation of Polynuclear Aromatic Hydrocarbons in Coal Tar Oil Contaminated Soil	149
9. Biorremediation and Reuse of Soils Containing No. 5 Fuel Oil in New England Using an Above-Ground Treatment Cell : A Case Study	163
10. Effects of Bioremediation on Toxicity, Mutagenesis, and Microbiota in Hydrocarbon-Polluted Soils	175
11. Biodegradation of Phenol	199
12. Bioremediation of Petroleum-Contaminated Soils at Railroad Facilities	227
13. Electrokinetically Enhanced In Situ Soil Decontamination	245
14. Effects of Gender, Route of Administration, and Soil on the Bioavailability of Coal Tar Components	299
15. Bioremediation of Hydrocarbon-Contaminated Soils Using Indigenous Microbes	317
16. Surfactant-Enhanced Bioremediation of Polynuclear Aromatic Hydrocarbons in Coke Waste	345
17. Engineering Application of Biooxidation Processes for Treating Petroleum-Contaminated Soil	373
 Part III : BIOREMEDIATION STRATEGIES	
18. In Situ Remediation of Contaminated Soils Containing Hazardous Mixed Wastes by Bio-Electrokinetic Remediation and Other Competitive Technologies	405
19. Bioremediation of Hexavalent Chromium in Water, Soil, and Slag Using Sulfate-Reducing Bacteria	437
20. Status of Sea-Borne Bioremediation Technologies	459
21. Biocolloid Formation : An Approach to Bioremediation of Toxic Metal Wastes	481
22. Bioremediation of Hazardous Sludge from a Storage Pond	497
23. Improved Spatial Resolution in Vertical and Horizontal Holes for Measurement of Bioremediation Parameters and Histories	513
24. Enhancement of Bioremediation by Partial Preoxidation	543
25. Microbial Bioavailability of Residual Organic Contaminants in Soils	599
 Part IV : TRADITIONAL SOIL-SPECIFIC TECHNOLOGIES	
26. The Use of Surfactants to Enhance Pump-and-Treat Processes for In Situ Soil Remediation	633
27. Modeling Soil Bioremediation	645
28. Using Microbial Kinetics in the Bioremediation of Contaminated Soils	681
29. Enhanced In Situ-Flushing Fundamentals	691
30. Modern In-Field Process Systems – Case Study : Soil Washing	719
31. Soil-Washing Processes for Site Remediation	745
32. Vapor Abatement Cost Analysis Methodology for Calculating Life-Cycle Costs for Hydrocarbon Vapor Extracted During Soil Venting	779

33.	Soil Gas Movement – Monitoring Under Natural and Remediation Conditions	791
Part V : DEVELOPING METHODS		
34.	Micro-Scale Field Laboratory Methods for the Chemical Analysis of Samples for Use in Site Investigations and Remediation	831
35.	Wet Air Oxidation of Hazardous Wastes	849
36.	DCR Technology in the Field of Environmental Remediation	869
	Index	925
