

CONTENTS

	Page
Preface	ix
List of Contributors	xiii
Chapter 1 The Role and Nature of Environmental Testing Methods	1
Chapter 2 Behavior of Chemicals in the Atmosphere	13
2.1 Background for the examination of chemical processes in the atmosphere	15
2.2 Atmospheric chemistry	19
2.3 Degradation in the gas phase	57
2.4 Degradation in the liquid and adsorbed phase	81
2.5 Test methods for abiotic degradability	107
Chapter 3 Behaviour of Chemicals in Water, Sediments, and Soil	117
3.1 Abiotic chemical changes in water	119
3.2 Sediments	137
3.3 Soil systems	169
Chapter 4 Prediction, Transformation, Degradation, and Accumulation of Chemicals in Biota	193
4.1 Biotransformation processes	195
4.2 Degradation by microorganisms in soil and water	213
4.3 Modelling of biotic uptake	233
4.4 Accumulation in aquatic organisms	243
4.5 Bioaccumulation in terrestrial food chains	257
Chapter 5 Predicting the Movement of Chemicals between Environmental Compartments (air-water-soil-biota)	285
Chapter 6 Regulatory Needs for Tests to Predict the Behaviour of Environmental Chemicals	333
Chapter 7 Conclusions and Recommendations	351
Index	359
