	Page
Introduction	
Systems Analysis for Environmental Pollution Control	3
Part I	
Water Pollution Control	
1. Modeling of Wastewater Disposal Systems	21
2. Regional Wastewater Management Systems	41
3. A Regional Planning Model for Water	61
4. Introduction to Simulation Techniques	91
5. Mathematical Model for Oxygen Balance in Rivers	107
6. Water Quality Models and Aquatic Eco-systems Status, Problems and Prospectives	137
Part II	
Water Supply and Water Resources Development	
7. Models of Water Supply Systems	157
8. An Economic Appraisal of Changes in Water Use Through Investments in Navigable Rivers and Canals	181
9. Water resources Management	197
10. Mathematical Approach to Water Resources Management in Italy	205
Part III	
Air Pollution control	
11. A Survey of Air Pollution Control Models	219
12. Mathematical Models for Air Pollution Abatement	237
13. Mathematical Models for Air Pollution Control : Determination of Optimum Abatement Policies	251
Part IV	
Solid Waste Disposal	
14. Solid Waste : Management and Models	269
15. Computer-Based Design of Refuse Collection Systems	307
16. Regional Planning Models for Solid Waste Management	327
17. Routing Problems for Street Cleaning and Snow Removal	363
Part V	
Noise Control	
18. Environmental Noise Management	377
Part VI	
Total Environmental Models	
19. Total Environmental Quality Management Models	403
20. Environmental Accountability Parallels Between Nuclear Safeguards and Pollution Control	437
Index	445
