

CONTENTS

	Page
Mission Control Strategies : Costs and Benefits	1
Minimization of Air Pollution at New York's Laguardia Airport	20
Estimation of Emission Control Costs for Particulate Air Pollutants	34
Merrimack River Basin Monitoring System	54
Cost Analysis of Optional Methods of Shipboard Domestic Waste Disposal	70
Treatment of Glue Factory Wastes by Carbon Adsorption System	87
Economics of At-Source Wastewater Control In Industrial Plants	115
A least Cost Method for the Design of Wastewater Collection Systems	133
Economic Utilization of Municipal Refuse	153
Recycling as an Alternative for the Inner City	176
Reclamation of Solid Waste Through Product Planning	198
Performance and Costs of Instruments Used for Air Monitoring	200
Equipment Evaluation and Systems for Solid Waste Recovery and Recycling	201
Reliable Air Monitoring Methods Needed	204
Economical Utilization of Solid Waste as Fuel for Energy Conversion	209
Techno-Economic Selection in Times of Changing Costs and Performance Requirements	234
Performance and Costs of Instruments Used for Water Monitoring	250
An Address by Dr. Stanley M. Greenfield. Assistant Administrator for Research and Monitoring Environmental Protection Agency, College of Engineering, university of Rhode Island	253
Resource Recovery Technology	258
Performance and Costs of Instruments Used for Air Pollution	271
Performance of Instruments Used for Monitoring Water and Wastewater Treatment processes	273
Economic Viability of the Organo from Process in Deodorization and Sterilization of Sewage Sludge	279
Economic Evaluation of Polluted Water Reclamation by Reverse Osmosis	291
The Inadequacy of Water Monitoring	308
Air Monitoring and Its costs	312
The Economics of Resource Reuse for a Small Town	318
