

## CONTENTS

	Page
1. Chemical Studies of Carbon Tetrachloride Transformation by <i>Pseudomonas stutzeri</i> Strain KC	1
2. Microbial Transformation of the Chiral Pollutants Mecoprop and Dichlorprop :The Necessity of Considering Stereochemistry	13
3. The Use of Fungal Laccase for Oxidation of Phosphorothiolates	21
4. MSA Monooxygenase : An Enzyme from Terrestrial and Marine Bacteria which Degrades the Natural Sulfonate Methanesulfonate	29
5. Bacterial Fluoranthene Degradation : Indication for a Novel Degradation Pathway	39
6. Strategies for the Aerobic Biodegradation of Dinitrotoluenes	47
7. The Degradation of Nitrate Ester Explosives and TT by <i>Enterobacter cloacae</i> PB2	59
8. Cross Induction of 4-Nitrobenzoate and 4-Aminobenzoate Degradation by <i>burkholderia cepacia</i> Strain PB4	71
9. Mineralization of Azo Dyes under Integrated Anaerobic / Aerobic Conditions	83
10. Microbial Enzyme in Biodegradation	95
11. Engineering Hydrolases for the Conversion of Halogenated Aliphatic Hydrocarbons and Epoxides	105
12. Ferredoxin –Mediated Reactivation of Catechol Dioxygenase Improves Aromatic Ring Cleavage in <i>Pseudomonads</i>	117
13. Directed Evolution of a Bacterial Pesticides Degrading Enzyme	127
14. Prokaryotic Whole-Cell living Bioreporters Expressing Bioluminescence upon the Presence of Bioavailable Concentrations of Specific Pollutants : An Overview	137
15. Active Biological Containment for Bioremediation in the Rhizosphere	151
16. Bioremediation of High Molecular Weight PAHs : Application of Techniques in Bioaugmentation and Bioavailability Enhancement	157
17. Role of <i>Acinetobacter</i> Bioemulsans in Petroleum Degradation	171
18. Bacterial Monitoring of a Crude Oil-Contaminated Soil Undergoing Laboratory-Scale Bioremediation	181
19. Bioavailability of 1,2,3,4-Tetrachlorodibenzo-p-Dioxin (TCDD) for Dechlorination by an Anaerobic Microbial Consortium, in the Presence of Dissolved Organic Carbon : preliminary Results	189
20. Biotic and Abiotic Factors Involved in Bioavailability of Pollutants	197
21. Biodegradation of organic Pollution Involving Soil Iron (III) Solubilized by Bacterial Siderophores as an Electron Acceptor : Possibilities and Perspectives	205
22. $^{13}\text{C}/^{12}\text{C}$ Stable Isotope Fractionation of Toluene by Anaerobic Degradation : A New Method to Monitor Biological Degradation In Situ?	219
23. Degradation of Atrazine in Contaminated Sub-Soil and Wastewater by whole Cells of <i>Pseudomonas</i> sp. Strain ADP and by the Enzyme Atrazine Chlorohydrolase	227
24. Field Application of a Genetically Engineered Microorganisms for Polycyclic Aromatic Hydrocarbon Bioremediation Process Monitoring and Control	241
25. Biostabilization Technology for Treating PAH- and PCP-Impacted Soil to Environmentally Acceptable Endpoints	255
26. Bioaugmentation Using Repeated Inoculations of Xenobiotic-Degrading Bacteria	273
27. Natural Attenuation of Aromatic Compounds and Heavy Metals in Lacustrine Sand Aquifer at Villa Farm, UK	285
28. New Membrane Reactor Concept for the Biodegradation of Recalcitrant Organic Compounds	297
Index	309
