

CONTENTS

	Page
Preface	
1. The Gas Supplies of the United States – Present and Future	1
2. Low Sulfur Coal Supplies for Environmental Purposes	17
3. The Supply of Oil for Future U.S. Needs and the Subsequent Effects on the Environment	24
4. The Demand for Sulfur Control Methods in Electric Power Generation	33
5. The Effect of Desulfurization Methods on Ambient Air Quality	48
6. Chemical Removal of Pyritic Sulfur from Coal	69
7. A Solvent-Refined Coal Process for Clean Utility Fuel	80
8. Production of Low Sulfur Fuel Oils from Utah Coals	91
9. Hydrodesulfurization of Residuals	98
10. H-Oil Desulfurization of Heavy Fuels	105
11. Low Sulfur Fuel by Pressurized Entrainment Carbonization of Coal	121
12. Wet Scrubbing of Sulfur Oxides from Flue Gases	135
13. Limestone Wet Scrubbing of Sulfur Dioxide from Power Generation Flue Gases for High and Low Sulfur Fuels	152
14. Process Experience of the RC/Bahco Sulfur Dioxide Removal System	161
15. The Chemistry of the Molten Carbonate Process for Sulfur Oxides Removal from stack Gases	174
16. Recovery of Sulfur dioxide from Stack Gases as Elemental Sulfur by a Dry, Fluidized Activated Carbon Process	183
17. Ammonia Injection : A Route to Clean Stacks	195
18. Aqueous Scrubbing of Nitrogen oxides from Stack Gases	206
19. The Chemistry of Nitrogen Oxides and Control through Combustion Modifications	215
