 Part I. Septic Tank – Soil Absorption Systems for Private Residences	
Introduction	1
Definitions	2
Suitability of Soil	3
Percolation Tests	4
Procedure for Percolation Tests Developed at Robert A. Taft Sanitary Engineering Center	4
Soil Absorption System	8
Absorption Trenches	10
Seepage Beds	14
Distribution boxes	16
Serial Distribution	16
Deep Absorption Trenches and Seepage Beds	20
Seepage Pits	20
Selection of a Septic Tank	26
Functions of Septic Tanks	26
Specifications for Septic Tanks	29
General Information on Septic Tanks	35
Inspection	39
 Part II Septic Tank – Soil Absorption Systems for Institutions, Recreational Areas, and Other Establishments	
Introduction	41
Estimates of Sewage Quantities	42
Estimates of Soil Absorption Area	45
Building Sewers	48
Collection systems	49
Grease Traps	50
Location	50
Construction Details	51
Capacity	52
Operation	53
Septic Tanks for Institutional Systems	53
Capacities	54
Dosing Tanks	55
Sand-Filter Trenches	56
Construction Features	60
Subsurface Sand Filters	62
Construction Features	62
Superficial Sand Filters	64
Chlorination	66
 Appendices	
Introduction to Appendices	71
A. Soil Absorption Capacity	72
Guide for Estimating Soil Absorption Potential	72
Evapotranspiration	74
Curtain Drains for absorption Trench Systems	74
Percolation Test Holes	75
Other Percolation Tests	75
B. Suggested Ordinance	77
C. Engineering Information Forms	81

D.	Drainage Fixture Unit Values	85
E.	Suggested Specifications for Watertight Concrete	86
F.	Industrial Waste Treatment	88
	Bibliography	91
