Foreword	v
Fundamentals of Automatic Local-Fire Extinction devices	1
The Development of Means and Methods of Extinguishing Fires on Oil Products in Reservoirs	19
A Review of Investigations on the Chemical Inhibition of Flames	29
The Chemical and Thermophysical Effect of Halogenated Hydrocarbons on the Concentration Limits of Flame Propagation for Hydrocarbons	52
The Effect of Tetrafluorodibromoethane on the flame Velocity of a Hydrogen-Air Mixture	66
The Minimum Ignition Energies of Finely-Dispersed Solid Combustible Materials	81
The Pyrological Properties of Some Combustible Forest Materials	96
The Structure Effect of Combustible Forest Materials on Their Rate of Combustion	107
Some characteristic Features of Combustion with Low Oxygen content	118
The Electric Charging of Free-Flowing Material in Gas Conveyors	127
The Discharges of Static Electricity	135
The Extinguishment of Experimental Fires by Steam-Gas Mixtures	145
A Study of the Conditions of Feeding Fire Extinguishing Liquids and Gas-Liquid Mixtures from cylinders through Pipelines	155
Thermophysical Processes during the Localization of Underground Fires	165
A Study of Stationary Apparatus for Fire-Extinguishment with Powder	177
Design and Calculations for Fire Ladder Extensions	189
