
Contents

Preface xvii

CHAPTER 1 Introduction 1

References 5

**CHAPTER 2 Water Management:
Institutions and Technology** 6

- 2.1 From Projects to Issues 6
- 2.2 Institutions 7
- 2.3 Legal Considerations 10
- 2.4 Technology and Water Management 16
- 2.5 Outlook for the Future 17
- Problems 18
- References 18

**CHAPTER 3 Water Management:
Environmental Considerations** 20

- 3.1 Environmental Regulation and Protection 22
- 3.2 Effects of Environmental Regulations 26
- 3.3 The Future of Pollution Control Efforts in the United States 28
- Problems 30
- References 30

**CHAPTER 4 Water Use and Wastewater
Generation** 31

- 4.1 Water-Using Sectors 32
- 4.2 Water-Use Trends 41
- 4.3 Factors Affecting Water Use 47

4.4	Reclaimed Water	52
4.5	Water Availability	58
4.6	Water Use	58
4.7	Water-Use Forecasting	59
4.8	Quantities of Wastes	67
4.9	Waste Flows from Urban Areas	67
4.10	Industrial Waste Volumes	71
4.11	Agricultural Wastes	71
	Problems	71
	References	73

CHAPTER 5 The Availability of Water 78

Water Quantity 78

5.1	Soil Moisture	78
5.2	Surface Waters and Groundwater	79
5.3	Runoff Distribution	80
5.4	Groundwater Distribution	80

Water Quality 82

5.5	Groundwater	83
5.6	Surface Water	83

Hydrology and Water Management 83

5.7	The Water Budget	84
-----	------------------	----

Surface-Water Supplies 85

5.8	Basin Characteristics Affecting Runoff	86
5.9	Natural and Regulated Runoff	86
5.10	Storage	87

Reservoirs 87

5.11	Determination of Required Reservoir Capacity	87
5.12	Classical Method of Computation	88
5.13	Frequency of Extreme Events	90
5.14	Probabilistic Mass Type of Analysis	92
5.15	Losses from Storage	92

Groundwater 94

5.16	The Subsurface Distribution of Water	95
5.17	Aquifers	96
5.18	Fluctuations in Groundwater Level	96
5.19	Safe Yield of an Aquifer	98
5.20	Groundwater Flow	99
5.21	Hydraulics of Wells	103
5.22	Boundary Effects	112
5.23	Regional Groundwater Systems	112
5.24	Saltwater Intrusion	118

- 5.25 Groundwater Recharge 118
- 5.26 Concurrent Development of Groundwater and Surface-Water Sources 119
 - Problems 120
 - References 123

CHAPTER 6 Conveying and Distributing Water 125

- 6.1 Types of Aqueducts 125
- 6.2 Hydraulic Considerations 126
- 6.3 Design Considerations 132
 - Distribution Systems 133**
- 6.4 System Configurations 134
- 6.5 Basic System Requirements 134
- 6.6 Hydraulic Design 135
- 6.7 Distribution System Design and Analysis 168
- 6.8 Distribution Reservoirs and Service Storage 171
 - Pumping 179**
- 6.9 Pumping Head 179
- 6.10 Power 180
- 6.11 Cavitation 180
- 6.12 System Head 181
- 6.13 Pump Characteristics 182
- 6.14 Selection of Pumping Units 183
 - Problems 185
 - References 191

CHAPTER 7 Wastewater and Stormwater Systems 194

- Hydraulic Considerations 194**
- 7.1 Uniform Flow 194
- 7.2 Gradually Varied Flow and Surface Profiles 197
- 7.3 Velocity Considerations 202
 - Design of Sanitary Sewers 203**
- 7.4 House and Building Connections 204
- 7.5 Collecting Sewers 204
- 7.6 Intercepting Sewers 204
- 7.7 Materials 205
- 7.8 System Layout 206
- 7.9 Hydraulic Design 208
- 7.10 Protection Against Floodwaters 217
- 7.11 Inverted Siphons 218
- 7.12 Wastewater Pumping Stations 218

	Design of Storm Drainage Systems	219
7.13	Hydrologic Considerations	220
7.14	Design Flow	221
7.15	Procedures for Estimating Runoff	222
7.16	Stormwater Inlets	233
7.17	System Layout	236
7.18	Hydraulic Design of Urban Storm Drainage Systems	237
7.19	Stormwater Detention/Retention	245
	Problems	249
	References	254

CHAPTER 8 Water Quality 255

	Microbiological Quality	255
8.1	Waterborne Diseases	255
8.2	Coliform Bacteria as Indicator Organisms	260
	Chemical Quality of Drinking Water	262
8.3	Assessment of Chemical Quality	262
8.4	Chemical Contaminants	266
	Quality Criteria for Surface Waters	274
8.5	Pollution Effects on Aquatic Life	274
8.6	Conventional Water Pollutants	275
8.7	Toxic Water Pollutants	279
	Selected Pollution Parameters	281
8.8	Total and Suspended Solids	281
8.9	Biochemical and Chemical Oxygen Demands	283
8.10	Coliform Bacteria	288
	Problems	291
	References	293

CHAPTER 9 Systems for Treating Wastewater and Water 295

	Wastewater Treatment Systems	295
9.1	Industrial Wastewaters	295
9.2	Infiltration and Inflow	298
9.3	Combined Sewers	298
9.4	Purposes of Wastewater Treatment	299
9.5	Selection of Treatment Processes	302
	Water Treatment Systems	311
9.6	Water Sources	311
9.7	Purpose of Water Treatment	313
9.8	Selection of Water Treatment Processes	314
9.9	Water-Processing Sludges	320

CHAPTER 10 Physical Treatment Processes

	Flow-Measuring Devices	322
10.1	Measurement of Water Flow	322
10.2	Measurement of Wastewater Flow	323
	Screening Devices	324
10.3	Water-Intake Screens	325
10.4	Screens in Wastewater Treatment	326
10.5	Comminutors	327
	Hydraulic Characteristics of Reactors	328
10.6	Residence Time Distribution	328
10.7	Ideal Reactors	328
10.8	Dispersed Plug Flow	332
	Mixing and Flocculation	335
10.9	Rapid Mixing	336
10.10	Flocculation	337
	Sedimentation	341
10.11	Fundamentals of Sedimentation	341
10.12	Types of Clarifiers	343
10.13	Settling of Flocculent Particles	345
10.14	Zone Settling	347
10.15	Sedimentation in Water Treatment	351
10.16	Sedimentation in Wastewater Treatment	354
10.17	Grit Chambers in Wastewater Treatment	359
	Filtration	360
10.18	Gravity Granular-Media Filtration	361
10.19	Description of a Typical Gravity Filter System	364
10.20	Flow Control Through Gravity Filters	368
10.21	Head Losses Through Filter Media	376
10.22	Backwashing and Media Fluidization	379
10.23	Pressure Filters	386
10.24	Slow-Sand Filters	387
	Problems	387
	References	393

CHAPTER 11 Chemical Treatment Processes

	Chemical Considerations	396
11.1	Inorganic Chemicals and Compounds	396
11.2	Hydrogen Ion Concentration	401
11.3	Alkalinity and pH Relationships	402
11.4	Chemical Equilibria	403
11.5	Ways of Shifting Chemical Equilibria	405
11.6	Chemical Process Kinetics	405

11.7	Colloidal Dispersions	410
11.8	Coagulation Process	413
11.9	Coagulants	415
11.10	Coagulant Aids	418
	Water Softening	420
11.11	Chemistry of Lime–Soda Ash Process	421
11.12	Process Variations in Lime–Soda Ash Softening	427
11.13	Cation Exchange Softening	429
11.14	Radionuclides Removal by Lime–Soda Ash Softening	431
	Iron and Manganese Removal	432
11.15	Chemistry of Iron and Manganese	432
11.16	Preventative Treatment	433
11.17	Iron and Manganese Removal Processes	434
	Chemical Disinfection and By-product Formation	436
11.18	Chemistry of Chlorination	436
11.19	Chlorine Dioxide	440
11.20	Ozone	441
11.21	Chlorination By-products	442
11.22	Control of Trihalomethanes	444
	Disinfection of Potable Water	445
11.23	Concept of the $C \cdot t$ Product	445
11.24	Surface-Water Disinfection	449
11.25	Groundwater Disinfection	453
	Disinfection of Wastewater	455
11.26	Conventional Effluent Disinfection	456
11.27	Tertiary Effluent Disinfection	457
	Taste and Odor	458
11.28	Control of Taste and Odor	459
	Fluoridation	460
11.29	Fluoridation	461
11.30	Defluoridation	462
	Corrosion and Corrosion Control	462
11.31	Electrochemical Mechanism of Iron Corrosion	462
11.32	Water Stabilization	464
11.33	Corrosion of Lead Pipe and Solder	467
11.34	Cathodic Protection	469
11.35	Corrosion of Sewer Pipes	469
	Reduction of Dissolved Salts	470
11.36	Distillation of Seawater	470
11.37	Reverse Osmosis	472
11.38	Electrodialysis	479

Nitrate Removal 480

11.39 Anion Exchange for Nitrate Removal 481

11.40 Anion Exchange Treatment System 482

Volatile Organic Chemical Removal 484

11.41 Design of Air-Stripping Towers 485

Synthetic Organic Chemical Removal 487

11.42 Activated Carbon Adsorption 488

11.43 Granular Activated Carbon Systems 489

Problems 490

References 501

CHAPTER 12 Biological Treatment Processes 504**Biological Considerations 504**

12.1 Bacteria and Fungi 505

12.2 Algae 506

12.3 Protozoans and Higher Animals 507

12.4 Metabolism, Energy, and Synthesis 508

12.5 Enzyme Kinetics 512

12.6 Growth Kinetics of Pure Bacterial Cultures 514

12.7 Biological Growth in Wastewater Treatment 518

12.8 Factors Affecting Growth 520

12.9 Population Dynamics 522

Characteristics of Wastewater 527

12.10 Flow and Strength Variations 528

12.11 Composition of Wastewater 532

Trickling (Biological) Filters 534

12.12 Biological Process in Trickling Filtration 535

12.13 Trickling-Filter Operation and Filter Media
Requirements 536

12.14 Trickling-Filter Secondary Systems 538

12.15 Efficiency Equations for Stone-Media Trickling Filters 541

12.16 Efficiency Equations for Plastic-Media Trickling Filters 546

12.17 Combined Trickling-Filter and Activated-Sludge
Processes 555**Rotating Biological Contactors 556**12.18 Description of Rotating Biological Contactor Media and
Process 556

12.19 Design of the RBC Process 559

Activated Sludge 561

12.20 BOD Loadings and Aeration Periods 561

12.21 Activated-Sludge Treatment Systems 565

12.22 High-Purity-Oxygen Activated Sludge 578

12.23	Design Criteria for High-Purity-Oxygen Aeration	581
12.24	Kinetics Model of the Activated-Sludge Process	584
12.25	Laboratory Determination of Kinetic Constants	588
12.26	Application of the Kinetics Model in Process Design	593
12.27	Oxygen Transfer and Oxygenation Requirements	597
12.28	Determination of Oxygen Transfer Coefficients	602
12.29	Operation and Control of Activated-Sludge Processes	608

Stabilization Ponds 611

12.30	Description of a Facultative Pond	612
12.31	BOD Loadings of Facultative Ponds	613
12.32	Advantages and Disadvantages of Stabilization Ponds	
12.33	Completely Mixed Aerated Lagoons	616

Odor Control 621

12.34	Sources of Odors in Wastewater Treatment	621
12.35	Methods of Odor Control	622

Individual On-Site Wastewater Disposal 624

12.36	Septic Tank-Absorption Field System	624
-------	-------------------------------------	-----

Marine Wastewater Disposal 625

12.37	Ocean Outfalls	625
	Problems	626
	References	637

CHAPTER 13 Processing of Sludges 639

Sources, Characteristics, and Quantities of Waste Sludges 639

13.1	Weight and Volume Relationships	639
13.2	Characteristics and Quantities of Wastewater Sludges	
13.3	Characteristics and Quantities of Water-Processing Sludges	649

Arrangement of Unit Processes in Sludge Disposal 653

13.4	Selection of Processes for Wastewater Sludges	654
13.5	Selection of Processes for Water Treatment Sludges	660

Gravity Thickening 664

13.6	Gravity Sludge Thickeners in Wastewater Treatment	664
13.7	Gravity Sludge Thickeners in Water Treatment	666

Flotation Thickening 667

13.8	Description of Dissolved-Air Flotation	668
13.9	Design of Dissolved-Air Flotation Units	669

Biological Sludge Digestion 671

13.10	Anaerobic Sludge Digestion	671
13.11	Single-Stage Floating-Cover Digesters	672
13.12	High-Rate (Completely Mixed) Digesters	674

13.13	Volatile Solids Loadings and Digester Capacity	675
13.14	Aerobic Sludge Digestion	679
13.15	Open-Air Drying Beds	681
13.16	Composting	682
	Vacuum Filtration	684
13.17	Description of Rotary Vacuum Filtration	685
13.18	Vacuum Filtration of Wastewater Sludges	687
	Pressure Filtration	689
13.19	Description of Belt Filter Press Dewatering	690
13.20	Application of Belt Filter Dewatering	691
13.21	Sizing of Belt Filter Presses	694
13.22	Description of Filter Press Dewatering	697
13.23	Application of Pressure Filtration	699
	Centrifugation	702
13.24	Description of Centrifugation	702
13.25	Applications of Centrifugation	704
13.26	Suspended-Solids-Removal Efficiency	705
	Recovery of Chemicals	707
13.27	Lime Recovery	707
13.27	Alum Recovery	708
	Ultimate Disposal	709
13.29	Agricultural Land Application	709
13.30	Land Burial of Dewatered Sludge	714
13.31	Combustion of Organic Sludges	714
13.32	Sludge Incinerators	716
13.33	Ocean Disposal of Sludge	719
	Problems	719
	References	729
CHAPTER 14 Advanced Wastewater Treatment Processes 731		
	Limitations of Secondary Treatment	731
14.1	Effluent Standards	732
14.2	Flow Equalization	734
	Selection of Advanced Wastewater Treatment Processes	735
14.3	Selecting and Combining Unit Processes	736
	Suspended-Solids Removal	738
14.4	Granular-Media Filtration	738
14.5	Filtration and Chlorination for Virus Removal	742
	Carbon Adsorption	744
14.6	Granular-Carbon Columns	745
14.7	Carbon Regeneration	747

	Phosphorus Removal	748
14.8	Biological Phosphorus Removal	749
14.9	Biological–Chemical Phosphorus Removal	750
14.10	Tracing Phosphorus Through Treatment Processes	755
	Nitrogen Removal	758
14.11	Tracing Nitrogen Through Treatment Processes	759
14.12	Biological Nitrification	761
14.13	Biological Denitrification	766
14.14	Biological Nitrification–Denitrification	770
14.15	Ammonia Stripping	775
	Wastewater Reclamation	778
14.16	Water Quality and Reuse Applications	778
14.17	Agricultural Irrigation	783
14.18	Landscape Irrigation	792
14.19	Groundwater Recharge and Potable Supply	792
14.20	Water Factory 21, Orange County, California	793
	Problems	799
	References	808

CHAPTER 15 Water-Quality Models 810

15.1	Types of Water-Quality Models	812
15.2	An Elementary Water-Quality Model	814
15.3	EPA Stormwater Management Model	822
15.4	EPA Qual II Model	825
15.5	Lake and Reservoir Modeling	830
15.6	Groundwater-Quality Models	832
15.7	Reliability of Water-Quality Models	834
	Problems	834
	References	835

Appendix 837

Index 848
