Preface	v
Contributors	xvii
1 Pressurized Ozonation	
<i>Lawrence K. Wang and Nazih K. Shammam</i>	1
1. Introduction	1
1.1. Oxyozosynthesis Sludge Management System	2
1.2. Oxyozosynthesis Wastewater Reclamation System	5
2. Description of Processes	7
2.1. Ozonation and Oxygenation Process	7
2.2. Flotation Process	9
2.3. Filter Belt Press	13
2.4. Performance of Oxyozosynthesis Sludge Management System	16
2.5. Performance of Oxyozosynthesis Wastewater Reclamation System	18
3. Formation and Generation of Ozone	18
3.1. Formation of Ozone	18
3.2. Generation of Ozone	19
4. Requirements for Ozonation Equipment	22
4.1. Feed Gas Equipment	23
4.2. Ozone Generators	24
4.3. Ozone Contactors	24
5. Properties of Ozone	26
6. Disinfection by Ozone	31
7. Oxidation by Ozone	35
7.1. Ozone Reaction with Inorganics	35
7.2. Ozone Reaction with Organic Material	38
8. Oxygenation and Ozonation Systems	43
8.1. Oxygenation Systems	43
8.2. Ozonation Systems	46
8.3. Removal of Pollutants from Waste by Ozonation	48
Nomenclature	50
Acknowledgments	50
References	50
2 Electrochemical Wastewater Treatment Processes	
<i>Guohua Chen and Yung-Tse Hung</i>	57
1. Introduction	57
2. Electrochemical Reactors for Metal Recovery	58
2.1. Typical Reactors Applied	58
2.2. Electrode Materials	64
2.3. Application Areas	64
3. Electrocoagulation	64
3.1. Factors Affecting Electrocoagulation	66
3.2. Electrode Materials	69
3.3. Typical Design	69
3.4. Effluents Treated by EC	70
4. Electroflotation	70
4.1. Factors Affecting EF	71
4.2. Comparison with Other Flotation Technologies	76
4.3. Oxygen Evolution Electrodes	76

4.4	Typical Designs	77
4.5	Wastewaters Treated by EF	80
5.	Electro-oxidation	80
5.1.	Indirect EO Processes	82
5.2.	Direct Anodic Oxidation	82
5.3.	Typical Designs	93
6.	Summary	93
	Nomenclature	95
	References	95
3	Irradiation	
	<i>Lawrence K. Wang, J. Paul Chen, and Robert C. Ziegler</i>	107
1.	Introduction	107
1.1.	Disinfection and Irradiation	107
1.2.	Pathogenic Organisms	108
1.3.	Pathogen Occurrence in the United States	108
1.4.	Potential Human Exposure to Pathogens	108
2.	Pathogens and Their Characteristics	109
2.1.	Viruses	109
2.2.	Bacteria	110
2.3.	Parasites	110
2.4.	Fungi	112
3.	Solid Substances Disinfection	112
3.1.	Long-Term Storage	112
3.2.	Chemical Disinfection	112
3.3.	Low-Temperature Thermal Processes for Disinfection	113
3.4.	High-Temperature Thermal Processes for Disinfection	114
3.5.	Composting	114
3.6.	High-Energy Radiation	115
4.	Disinfection with Electron Irradiation	115
4.1.	Electron Irradiation Systems and Process Description	115
4.2.	Electron Irradiation Design Considerations	117
4.3.	Electron Irradiation Operational Considerations	118
4.4.	Electron Irradiation Performance	118
5.	Disinfection with γ -Irradiation	119
5.1.	γ -Irradiation Systems and Process Description	119
5.2.	γ -Irradiation Design Considerations	122
5.3.	γ -Irradiation Operational Considerations	124
6.	X-Ray Facilities	126
7.	New Applications	126
7.1.	Food Disinfection by Irradiation	126
7.2.	Hospital Waste Treatment by Irradiation	128
7.3.	Mail Irradiation	130
8.	Glossary	131
	References	132
4	Nonthermal Plasma Technology	
	<i>Toshiaki Yamamoto and Masaaki Okubo</i>	135
1.	Fundamental Characteristics of Nonthermal Plasma	135
1.1.	Definition and Characteristics of Plasma	135
1.2.	Generation of Plasma	145
1.3.	Analysis and Diagnosis of Nonthermal Plasma	165
2.	Environmental Improvement	173
2.1.	Electrostatic Precipitator	173
2.2.	Combustion Flue Gas Treatment from Power Plant	183
2.3.	Nonthermal Plasma Application for Detoxification	196
2.4.	Air Cleaner for Odor Control	199

2.5. Ozone Synthesis and Applications 206

2.6. Decomposition of Freon and VOC 212

2.7. Diesel Engine Exhaust Gas Treatment 215

2.8. Gas Concentration Using Nonthermal Plasma Desorption 239

2.9. Emission Gas Decomposition in Semiconductor Manufacturing Process 248

3. Surface Modification 256

 3.1. RF Plasma CVD 256

 3.2. Surface Modification for Substrate 257

 3.3. Surface Modification for Glass 261

 3.4. Surface Modification for Polymer or Cloth 266

 3.5. Surface Modification for Metal 271

Nomenclature 277

References 280

5 Thermal Distillation and Electrodialysis Technologies for Desalination

J. Paul Chen, Lawrence K. Wang, and Lei Yang 295

1. Introduction 295

2. Thermal Distillation 301

 2.1. Introduction 301

 2.2. Working Mechanisms 302

 2.3. Multistage Flash Distillation 304

 2.4. Multieffect Distillation 304

 2.5. Vapor Compression 307

 2.6. Solar Desalination 307

 2.7. Important Issues in Design (O&M) 311

3. Electrodialysis 312

 3.1. Introduction 312

 3.2. Mechanisms 312

 3.3. Important Issues in Design 314

 3.4. Electrodialysis Reversal 317

 3.5. Electrodeionization 319

4. Reverse Osmosis 321

5. Energy 322

6. Environmental Aspect of Desalination 324

Nomenclature 325

References 326

6 Reverse Osmosis Technology for Desalination

**Edward S.K. Chian, J. Paul Chen, Ping-Xin Sheng,
Yen-Peng Ting, and Lawrence K. Wang 329**

1. Introduction 329

2. Membrane Filtration Theory 330

 2.1. Osmosis and RO 330

 2.2. Membranes 332

 2.3. Membrane Filtration Theory 334

 2.4. Concentration Polarization 338

 2.5. Compaction 339

3. Membrane Modules and Plant Configuration 340

 3.1. Membrane Modules 340

 3.2. Plant Configuration of Membrane Modules 343

4. Pretreatment and Cleaning of Membrane 346

 4.1. Mechanisms of Membrane Fouling 346

 4.2. Feed Pretreatment 349

 4.3. Membrane Cleaning and Regeneration 354

5. Case Study 359

 5.1. Acidification and Scale Prevention for Pretreatment 359

 5.2. Cartridge Filters for Prefiltration 359

 5.3. Reverse Osmosis 359

5.4	Neutralization and Posttreatment	361
5.5	Total Water Production Cost and Grand Total Costs	362
	Nomenclature	362
	References	363
7	Emerging Biosorption, Adsorption, Ion Exchange, and Membrane Technologies	
	<i>J. Paul Chen, Lawrence K. Wang, Lei Yang, and Soh-Fong Lim</i>.....	367
1.	Introduction	367
2.	Emerging Biosorption for Heavy Metals	367
2.1.	Biosorption Chemistry	368
2.2.	Biosorption Process	369
2.3.	Biosorption Mathematical Modeling	372
3.	Magnetic Ion Exchange Process	374
4.	Liquid Membrane Process	377
4.1.	Introduction	377
4.2.	Mechanism	377
4.3.	Applications	378
5.	Emerging Technologies for Arsenic Removal	380
5.1.	Precipitation–Coagulation, Sedimentation, and Flotation	380
5.2.	Electrocoagulation	381
5.3.	Adsorption	382
5.4.	Ion Exchange	386
5.5.	Membrane Filtration	386
	Nomenclature	387
	References	387
8	Fine Pore Aeration of Water and Wastewater	
	<i>Nazih K. Shamas</i>	391
1.	Introduction	391
2.	Description	392
3.	Types of Fine Pore Media	393
3.1.	Ceramics	394
3.2.	Porous Plastics	395
3.3.	Perforated Membranes	396
4.	Types of Fine Pore Diffusers	398
4.1.	Plate Diffusers	398
4.2.	Tube Diffusers	400
4.3.	Dome Diffusers	402
4.4.	Disc Diffusers	403
5.	Diffuser Layout	407
5.1.	Plate Diffusers	408
5.2.	Tube Diffusers	409
5.3.	Disc and Dome Diffusers	410
6.	Characteristics of Fine Pore Media	411
6.1.	Physical Description	411
6.2.	Dimensions	411
6.3.	Weight and Specific Weight	412
6.4.	Permeability	412
6.5.	Perforation Pattern	413
6.6.	Strength	413
6.7.	Hardness	414
6.8.	Environmental Resistance	414
6.9.	Miscellaneous Physical Properties	415
6.10.	Oxygen Transfer Efficiency	415

6.11. Dynamic Wet Pressure 416
 6.12. Bubble Release Vacuum 419
 6.13. Uniformmity 420
 7. Performance in Clean Water 422
 7.1. Steady-State DO Saturation Concentration (C_w) 423
 7.2. Oxygen Transfer 424
 8. Performance in Process Water 432
 8.1. Performance 432
 8.2. Factors Affecting Performance 439
 8.3. Operation and Maintenance 441
 Nomenclature 442
 References 443

9 Emerging Flotation Technologies

Lawrence K. Wang 449
 1. Modern Flotation Technologies 450
 2. Groundwater Decontamination Using DAF 452
 3. Textile Mills Effluent Treatment Using DAF 459
 4. Petroleum Refinery Wastewater Treatment Using DAF 459
 5. Auto and Laundry Wasterwater Using DAF 460
 6. Seafood Processing Wastewater Treatment Using DAF 462
 7. Storm Runoff Treatment Usng DAF 464
 8. Industrial Effluent Treatment by Biological Process Using DAF
 for Secondary Flotation Clarification 465
 9. Industrial Resource Recovery Using DAF for Primary Flotation Clarification 467
 10. First American Flotation–Filtration Plant for Water Purification—Lenox
 Water Treatment Plant, MA, USA 469
 11. Once the World’s Largest Potable Flotation–Filtration Plant—Pittsfield
 Water Treatment Plant, MA, USA 471
 12. The Largest Potable Flotation–Filtration Plant in the Continent of North
 America—Table Rock and North Saluda Water Treatment Plant, SC, USA 473
 13. Emerging DAF Plants—AquaDAF™ 474
 14. Emerging Full-Scale Anaerobic Biological Flotation—Kassel, Germany 476
 15. Emerging Dissolved Gas Flotation and Sequencing Batch Reactor (DGF-SBR) 478
 16. Application of Combined Primary Flotation Clarification and Secondary Flotation Clarification
 for Treatment of Dairy Effluents—A UK Case History 479
 17. Recent DAF Developments 480
 References 481

10 Endocrine Disruptors: *Properties, Effects, and Removal Processes*

Nazih K. Shammass 485
 1. Introduction 485
 2. Endocrine System and Endocrine Disruptors 487
 2.1. The Endocrine System 487
 2.2. Endocrine Disruptors 487
 3. Descriptions of Specific EDCs 488
 3.1. Pesticide Residues 488
 3.2. Highly Chlorinated Compounds 491
 3.3. Alkylphenols and Alkylphenol Ethoxylates 494
 3.4. Plastic Additives 495
 4. Water Treatments for EDC Removal 496
 4.1. Granular Activated Carbon 496
 4.2. Powdered Activated Carbon 498
 4.3. Coagulation/Filtration 498
 4.4. Lime Softening 498
 5. Point-of-Usepoint-of-Entry Treatments 499
 6. Water Treatment Techniques for Specific EDC Removal 499
 6.1. Methoxychlor 499

6.2. Endosulfan	500
6.3. DDT	500
6.4. Diethyl Phthalate	500
6.5. Di-(2ethylhexyl) Phthalate	500
6.6. Polychlorinated Biphenyls	500
6.7. Dioxin	500
6.8. Alkylphenols and Alkylphenol Ethoxylates	501
Nomenclature	501
References	501
11 Filtration Systems for Small Communities	
<i>Yung-Tse Hung, Ruth Yu-Li Yeh, and Lawrence K. Wang</i>	505
1. Introduction	505
2. Operating Characteristics	505
3. SDWA Implementation	506
4. Filtration Treatment Technology Overview	506
5. Common Types of Water Filtration Processes for Small Communities	507
5.1. Process Description	508
5.2. Operation and Maintenance Requirements	512
5.3. Technology Limitations	512
5.4. Financial Considerations	513
6. Other Filtration Processes	514
6.1. Direct Filtration	514
6.2. Membrane Processes	514
6.3. Bag and Cartridge Type Filtration	516
6.4. Summary of Compliance Technologies for the SWTR	519
7. Case Studies of Small Water Systems	519
7.1. Case Study of Westfir, OR	519
7.2. Mockingbird Hill, Arkansas, Case Study	524
8. Intermittent Sand Filters for Wastewater Treatment	527
8.1. Technology Applications	527
8.2. Process Descriptions	527
8.3. Operation and Maintenance (O&M) Requirements	529
8.4. Technology Limitations	529
8.5. Financial Considerations	529
8.6. Case Studies	530
References	539
12 Chemical Feeding System	
<i>Puangrat Kajitvichyanukul, Yung-Tse Hung,</i>	
<i>and Jirapat Ananpattarachai</i>	543
1. Introduction	543
2. Chemicals Used in Water Treatment	545
2.1. Aluminum Sulfate or Alum	546
2.2. Ammonia	546
2.3. Calcium Hydroxide and Calcium Oxide	546
2.4. Carbon Dioxide	546
2.5. Ferric Chloride	547
2.6. Ferric Sulfate	547
2.7. Ferrous Sulfate	547
2.8. Phosphate Compounds	547
2.9. Polymers	548
2.10. Potassium Permanganate	548
2.11. Sodium Carbonate	548
2.12. Sodium Chlorite	549
2.13. Sodium Hydroxide	549
2.14. Sodium Hypochlorite	550

2.15. Sulfuric Acid	550
3. Chemical Storage	550
3.1. Storage of Powder Chemicals	550
3.2. Storage of Liquid Chemicals	555
3.3. Storage of Gaseous Chemicals	555
3.4. Storage Facility Requirements	557
4. Chemical Preparation of Solutions and Suspensions	558
4.1. Preparation of Dilute Solutions from Concentrated Solutions	558
4.2. Preparation of Dilute Solutions from Solid Products	559
4.3. Preparation of Suspensions	560
5. Chemical Feeding System	560
5.1. Dry Feeders	561
5.2. Solution Feeders	566
5.3. Gas Feeders	567
6. Design Examples	567
References	572

13 Wet Air Oxidation for Waste Treatment

Linda Y. Zou, Yuncang Li, and Yung-Tse Hung 575

1. Introduction	575
1.1. Process Description	576
1.2. Mechanisms and Kinetics	578
1.3. Design	580
1.4. Issues and Considerations of Using Wet Air Oxidation	580
2. Catalytic WAO Processes	581
2.1. Process Description	581
2.2. Process Application and Limitation	582
2.3. Design Considerations	586
3. Emerging Technologies in Advanced Oxidation	587
3.1. Photocatalytic Oxidation (PCO) Process	587
3.2. Supercritical Water Oxidation	592
4. Application Examples	598
4.1. Case 1: WAO of Refinery Spent Caustic: A Refinery Case Study	598
4.2. Case 2: CWAO for the Treatment of H-Acid Manufacturing Process Wastewater	601
4.3. Case 3: Photocatalytic Decolorization of Lanazol Blue CE Dye Solution in Flat-Plate Reactor	602
4.4. Case 4: Oxidation of Industrial Waste Waters in the Pipe Reactor (100)	604
References	605

14 Lime Calcination

Gupta Sudhir Kumar. Anushuya Ramakrishnan. and Yung-Tse Hung 611

1. Introduction	611
2. The Chemical Reactions	612
2.1. Calcium Carbonate	612
2.2. Magnesium Carbonate	612
2.3. Dolomite and Magnesian/Dolomitic Limestone	613
3. Kinetics of Calcination	613
3.1. Stages of Calcinations	613
3.2. Dissociation of High Calcium Limestone	614
3.3. Calorific Requirements for Dissociation of Calcium and Dolomitic Quick Lime	617
3.4. Dissociation of Magnesian/Dolomitic Limestones and Dolomite	618
3.5. Sintering of High Calcium Quicklime	618
3.6. Sintering of Calcined Dolomite	620
3.7. Steam Injection	621
3.8. Recarbonation	621
3.9. Calcination of Finely Divided Limestones	622
4. Properties of Limestones and Their Calcines	622
5. Factors Affecting Lime Calcination	623

5.1. Effect of Stone Size 623
5.2. Effect of Crystal Ion Spacing 624
5.3. Effect of Salts 624
5.4. Influence of Stone Impurities 624
5.5. Effect of Steam 625
5.6. Effect of Storage and Production 625
5.7. Effect of Calcination Temperature 626
6. Calcination of Industrial Solid Wastes 627
7. Carbon Dioxide Emissions from Lime Calcination 628
8. Solar Lime Calcination 628
9. Conclusions 631
Nomenclature 631
References 632

Appendix: Conversion Factors for Environmental Engineers

Lawrence K. Wang 635
