Chapter 1	Introduction to Space Sciences	1
	Applications of Space Studies	1
	Historical Background of Space Exploration	9
Chapter 2	Space Orbits and Trajectories	41
	Circular Orbits	41
	Kepler's Laws and Their Applications	56
	General Characteristics of Orbits	66
	Appendix	79
Chapter 3	Propulsion and Power for Space	83
	Rocket Propulsion	83
	Chemical Rockets : Liquid Propellants	89
	Chemical Rockets : Solid Propellants	110
	General Rocket Characteristics	117
	U.S. Launch Vehicles	128
	Heat Transfer Rocket Engines	135
	Charged-Particle Rocket Motors	143
	Advanced Propulsion Techniques	149
	Power Supplies in space	158
	Appendix	171
Chapter 4	Guidance, Tracking, and Information Systems	174
	Rocket Vehicle and Spacecraft Guidance	174
	Rocket and Space Vehicle Control	202
	Rocket and Space Vehicle Stabilization	206
	Attitude Sensors	213
	Tracking	217
	Radio Telemetry	228
	Appendix	238
Chapter 5	Applications in Meteorology, Communications, and Navigation	240
	Meteorology	240
	Communications by Satellite	262
	Navigational Satellites	282
	Geodetic Satellites	288
Chapter 6	The Sun	292
	General Properties of the Sun	292
	Electromagnetic Radiations	309
	The Photosphere	327
	The Chromosphere	337
	The Solar Corona	349
	Solar Radio Wave Emission	355
	Source of Solar Energy	359
	Solar Studies from Space	368
	Appendix	372
Chapter 7	The Solar System	375
	The Planets	375
	The Asteroids	395
	The Comets	401

Meteors, Meteorites, and Tektites 408
Micrometeoroids 429
Origin of the Solar System 441

Chapter 8 Earth and Its Environment 449
Earth's Gravitational Field 449
The Atmosphere 458
The Chemosphere 474
The Ionosphere 484
Interaction of Radio-Frequency Waves with the Ionosphere 500
Determination of Electron Densities 507
The Magnetosphere 520
Earth's Radiation Belt 543
Satellites for Geophysical and Interplanetary Studies 570
Appendix 575

Chapter 9 The Moon 578
Introduction 578
The Sun-Earth-Moon System 579
Physical properties of the Moon 596
Surface Features of the Moon 602
Lunar Radiations 619
Composition and History of the Moon 636
Lunar Studies from Spacecraft 646

Chapter 10 The Terrestrial Planets : Mercury, Venus, and Mars 664
Introduction 664
The Planet Mercury 664
The Planet Venus 671
The Mariner II Venus Probe 690
The Planet Mars 700

Chapter 11 The Major Planets and Pluto 730
Introduction 730
The Planet Jupiter 730
The Planet Saturn 748
The Planet Uranus 756
The Planet Neptune 759
The Planet Pluto 761

Chapter 12 The Universe 764
General Structure of the Universe 764
The Hertzsprung-Russell Diagram and Its Applications 786
Formation and Evolution of Stars 812
Origin of the Elements 823
Cosmological Theories 829
Nonoptical Astronomies 837
Study of the Universe with Spacecraft 849

Chapter 13 Man In Space 860
Project Mercury 860
Project Gemini 867
Project Apollo 870
Life Support in Space 881
Physiological Aspects of Space Flight 888
Man in the Universe 902
