PREFACE	xiii
ACKNOWLEDGMENTS	xvii
ACKNOWLEDGMENTS, FIRST EDITION	xix
ACKNOWLEDGMENTS, SECOND EDITION	xxi
I FUNDAMENTALS	1
1. Catalyst Fundamentals	3
1.1 Introduction	3
1.2 Catalyzed Versus Noncatalyzed Reactions	3
1.3 Catalytic Components	13
1.4 Selectivity	14
1.5 Promoters and their Effect on Activity and Selectivity	15
1.6 Dispersed Model for Catalytic Component on Carrier: Pt on Al ₂ O ₃	16
1.7 Chemical and Physical Steps in Heterogeneous Catalysis	18
1.8 Practical Significance of Knowing the Rate-Limiting Step	21
References	22
Questions	23
2. The Preparation of Catalytic Materials: Carriers, Active Components, and Monolithic Substrates	24
2.1 Introduction	24
2.2 Carriers	24
2.3 Making the Finished Catalyst	30
2.4 Nomenclature for Dispersed Catalysts	32
2.5 Monolithic Materials as Catalyst Substrates	32
2.6 Preparing Monolithic Catalysts	36
2.7 Catalytic Monoliths	37
2.8 Catalyzed Monolith Nomenclature	38
2.9 Precious Metal Recovery from Monolithic Catalysts	38
References	38
Questions	40

3. Catalyst Characterization	41
3.1 Introduction	41
3.2 Physical Properties of Catalysts	42
3.3 Chemical and Physical Morphology Structures of Catalytic Materials	48
3.4 Techniques for Fundamental Studies	60
References	61
Questions	62
4. Monolithic Reactors for Environmental Catalysis	63
4.1 Introduction	63
4.2 Chemical Kinetic Control	63
4.3 The Arrhenius Equation and Reaction Parameters	66
4.4 Bulk Mass Transfer	69
4.5 Reactor Bed Pressure Drop	74
4.6 Summary	76
References	76
Questions	77
5. Catalyst Deactivation	79
5.1 Introduction	79
5.2 Thermally Induced Deactivation	79
5.3 Poisoning	88
5.4 Washcoat Loss	94
5.5 General Comments on Deactivation Diagnostics in Monolithic Catalysts for Environmental Applications	95
References	97
Questions	98
II MOBILE SOURCE	101
6. Automotive Catalyst	103
6.1 Emissions and Regulations	103
6.2 The Catalytic Reactions for Pollution Abatement	106
6.3 The Physical Structure of the Catalytic Converter	107
6.4 First-Generation Converters: Oxidation Catalyst (1976–1979)	114
6.5 NO _x , CO and HC Reduction: The Second Generation: The Three-Way Catalyst (1979–1986)	118
6.6 Vehicle Test Procedures (U.S., European, and Japanese)	123
6.7 NO _x , CO, and HC Reduction: The Third Generation (1986–1992)	128
6.8 Palladium TWC Catalyst: The Fourth Generation (Mid-1990s)	136

6.9	Low-Emission Catalyst Technologies	138	
6.10	Modern TWC Technologies for the 2000s	146	
6.11	Toward a Zero-Emission Stoichiometric Spark-Ignited Vehicle	148	
6.12	Engineered Catalyst Design	153	
6.13	Lean-Burn Spark-Ignited Gasoline Engine	157	
	References	163	
	Questions	174	
7.	Automotive Substrates		176
7.1	Introduction to Ceramic Substrates	176	
7.2	Requirements for Substrates	178	
7.3	Design/Sizing of Substrates	180	
7.4	Physical Properties of Substrates	185	
7.5	Physical Durability	194	
7.6	Advances in Substrates	207	
7.7	Commercial Applications	222	
7.8	Summary	229	
	References	230	
	Questions	236	
8.	Diesel Engine Emissions		238
8.1	Introduction	238	
8.2	Worldwide Diesel Emission Standards	241	
8.3	NO _x -Particulate Trade-Off	245	
8.4	Analytical Procedures for Particulates	245	
8.5	Particulate Removal	246	
8.6	NO _x Reduction Technologies	263	
8.7	2007 Commercial System Designs (PM Removal Only)	272	
8.8	2010 Commercial System Approaches under Development (PM and NO _x Removal)	275	
8.9	Retrofit and Off-Highway	281	
8.10	Natural Gas Engines	282	
	References	283	
	Questions	292	
9.	Diesel Catalyst Supports and Particulate Filters		295
9.1	Introduction	295	
9.2	Health Effects of Diesel Particulate Emissions	298	
9.3	Diesel Oxidation Catalyst Supports	298	
9.4	Design/Sizing of a Diesel Particulate Filter	302	
9.5	Regeneration Techniques	313	
9.6	Physical Properties and Durability	319	
9.7	Advances in Diesel Filters	324	

9.8	Applications	340	
9.9	Summary	350	
	References	352	
	Questions	355	
10.	Ozone Abatement within Jet Aircraft		357
10.1	Introduction	357	
10.2	Ozone Abatement	358	
10.3	Deactivation	363	
10.4	Analysis of In-Flight Samples	365	
10.5	New Technology	371	
	References	372	
	Questions	373	
III	STATIONARY SOURCES		375
11.	Volatile Organic Compounds		377
11.1	Introduction	377	
11.2	Catalytic Incineration	379	
11.3	Halogenated Hydrocarbons	383	
11.4	Food Processing	390	
11.5	Wood Stoves	392	
11.6	Process Design	394	
11.7	Deactivation	394	
11.8	Regeneration of Deactivated Catalysts	395	
	References	399	
	Questions	401	
12.	Reduction of NO_x		403
12.1	Introduction	403	
12.2	Nonselective Catalytic Reduction of NO _x	404	
12.3	Selective Catalytic Reduction of NO _x	407	
12.4	Commercial Experience	417	
12.5	Nitrous Oxide (N ₂ O)	427	
12.6	Catalytically Supported Thermal Combustion	429	
	References	434	
	Questions	439	
13.	Carbon Monoxide and Hydrocarbon Abatement from Gas Turbines		440
13.1	Introduction	440	
13.2	Catalyst for CO Abatement	441	
13.3	Non-Methane Hydrocarbon (NMHC) Removal	443	
13.4	Oxidation of Reactive Hydrocarbons	444	

- 13.5 Oxidation of Unreactive Light Paraffins 445
- 13.6 Catalyst Deactivation 447
- References 448
- Questions 449

14. Small Engines 450

- 14.1 Introduction 450
- 14.2 Emissions 450
- 14.3 EPA Regulations 451
- 14.4 Catalyst for Handheld and Nonhandheld Engines 455
- 14.5 Catalyst Durability 463
- References 464
- Questions 466

IV NEW AND EMERGING TECHNOLOGIES 467

15. Ambient Air Cleanup 469

- 15.1 Introduction 469
- 15.2 Premair® Catalyst Systems 470
- 15.3 Other Approaches 478
- References 479
- Questions 481

16. Fuel Cells and Hydrogen Generation 482

- 16.1 Introduction 482
- 16.2 Low-Temperature PEM Fuel Cell Technology 488
- 16.3 The Ideal Hydrogen Economy 495
- 16.4 Conventional Hydrogen Generation 496
- 16.5 Hydrogen Generation from Natural Gas for PEM Fuel Cells 499
- 16.6 Other Fuel Cell Systems 505
- References 511
- Questions 517
