Chapter 1. Engine Exhaust Emissions

P. S. Myers, O. A. Uyehara, and H. K. Newhall

I.	Introduction	1
II.	When Is an Emittant a Pollutant?	2
	A. Unburned Hydrocarbons	4
	B. Carbon Monoxide	5
	C. Oxides of Nitrogen	6
	D. Sulfur Dioxide	6
	E. Particulates	6
III.	Formation of Pollutants	7
	A. Carbon Monoxide	7
	B. Nitric Oxide	9
	C. Hydrocarbons	14
	D. Particulates	16
	E. Odor	21
IV.	Transient Operation — Engines	22
	A. Carbureted Spark Ignition	23
	B. Port Injection Spark Ignition	24
	C. Cylinder Injection Spark Ignition	24
	D. Diesel Engine — Naturally Aspirated	25
	E. Diesel Engine — Turbocharged	25
	F. Gas Turbines	25
	G. External Combustion Engines	26
V.	Transient Operation — System	26
VI.	Evaluation of Vehicle Emissions	27
VII.	Control Techniques	29
	References	30

Chapter 2. The Chemistry of Spark-Ignition Engine Combustion and Emission Formation

J. B. Edwards

I.	Introduction	33
II.	Engine Processes	34
	A. Inputs	34
	B. Physical and Chemical Processes within the Engine	35
	C. Energy Consideration	36
	D. Outputs	37
III.	Ultimate Fate of Engine Emissions	38
IV.	The Engine—A Chemical Reactor	39
V.	The Combustion Chamber	39
	A. Reactor Conditions	41
	B. Low Temperature Reactions	47
	C. High Temperature Reactions in an Engine	58
VI.	Exhaust System	63
	A. Reactor Conditions	63
	B. Thermal Reactions in the Exhaust System	67
	C. Catalytic Reactions	68
VII.	Systems Approach to Reactions in an Engine	69
VIII.	Summary	72
	References	73

Chapter 3. Mechanism of Hydrocarbon Formation in Combustion Processes

R. A. Matula

I.	Introduction	77
II.	Ignition Delays in Low Molecular Weight Hydrocarbon-Oxydizer Systems	80
	A. Introduction	80
	B. Experimental Results	81
	C. The Prediction of Induction Times	95
III.	Production and Emission of Unburned Hydrocarbons	107
	A. Introduction	107
	B. Flame Quenching Phenomena	108
	C. Sources of Unburned Hydrocarbons in Engines	113
	D. Effect of Engine Variables on Hydrocarbon Emissions from Spark-Ignition Engines	123

IV. Some Effects of Hydrocarbon Emissions on Man and His Environment	126
A. Introduction	126
B. Hydrocarbons and Photochemical Smog	126
C. Hydrocarbon Emissions and Odor	130
D. Polynuclear Aromatic Hydrocarbon Emissions	139
References	145

Chapter 4. The Kinetics of Pollutant Formation in Spark-Ignition Engines

H. K. Newhall

I. Introduction	153
II. Chemical Thermodynamics of the Engine Cycle	155
A. Chemical Equilibrium	155
B. The Role of Chemical Kinetics	157
III. Combustion of Hydrocarbon Fuel-Air Mixtures and the Approach to the Initial High-Temperature Equilibrium State ..	158
IV. Formation of Nitric Oxide	159
A. Fundamental Investigations	159
B. Elementary Reactions and Rate Constants for Nitric Oxide Formation	164
C. Application to the Engine Cycle	165
V. Expansion and Exhaust Processes	169
A. General	169
B. Recombination of Atoms and Radicals	170
C. Oxidation of Carbon Monoxide	173
D. Nitric Oxide Decomposition	175
VI. The Effect of Pressure Oscillations on Nitric Oxide Kinetics	177
References	180

Chapter 5. Particulate Emission from Spark-Ignition Engines

G. S. Springer

I. Introduction	183
II. Measurement Techniques	185
A. Particulates Collected from Outside the Exhaust System ..	186
B. Particulate Sampling from the Exhaust System	187
C. Test Procedures for Particulate Emissions	192
III. Physical Characteristics of Particulates	193
A. Total Particulate Matter Emitted	193

B. Shape and Size Distribution of Particulates	199
IV. Chemical Composition of Particulates	202
A. Lead Content of Particulates	202
B. Chemical Composition of Particulates	207
V. Concluding Remarks	209
References	209

Chapter 6. Diesel Engines Combustion and Emissions

N. A. Henein

I. Introduction	211
II. Diesel Ignition and Combustion	213
A. Preignition Processes	213
B. Preignition Chemical Reactions	214
III. Direct-Injection Engines	217
A. Fuel Evaporation	217
B. Fuel-Air Distribution in the Spray	219
C. A Model for Combustion and Emission Formation in Direct Injection Engines	220
D. Heat Release Rates in Direct Injection Engines	225
E. Effect of Some Design and Operating Variables on Direct Injection Engine Emissions	228
IV. The M-System	247
V. Indirect Injection Engines	247
A. Effect of Design and Operating Variables	248
VI. Comparison Between the Emission Characteristics of Some Transportation Engines	252
A. Diesel Engines.....	252
B. Diesel and Gasoline Engines.....	255
VII. NO Emission Control	255
A. Injection Training	255
B. Water Addition	256
C. Exhaust-Gas Recirculation	258
VIII. Concluding Remarks	260
References	261

Chapter 7. Diffusion and Fallout of Pollutants Emitted by Aircraft Engines

S. L. Soo

I. Introduction	267
-----------------------	-----

II. Identification of Sources	268
III. Diffusion and Fallout	273
A. Cruising	278
IV. Chemical and Physical Conversions	279
V. Plume Axis from a Stack	280
A. Momentum Rise	280
B. Buoyancy Rise	281
C. Buoyancy and Temperature Gradient	281
D. Combined Relation	282
VI. Plume Paths from Aircraft	283
VII. Wing-Tip Vortices	285
VIII. Plume Visibility	285
IX. Concluding Remarks	287
Notation	287
References	288

Chapter 8. Instrumentation and Techniques for Measuring Emissions

R. W. Hurn

I. Methods for Measuring Pollutants	291
A. Terms of Expression	291
B. Instrumental	292
C. Wet Chemistry for Aldehyde Measurement	303
II. Automotive Emissions Measurement	304
A. Sampling Methods	304
B. Quantifying Emissions	309
C. Test Procedures	311
III. Measurement of Emissions from Diesel and Turbine Engines ..	313
A. Carbon Monoxide and Carbon Dioxide by NDIR	313
B. Hydrocarbon by FID	314
C. Oxides of Nitrogen	314
References	316

Chapter 9. Direct-Sampling Studies of Combustion Processes

E. L. Knuth

I. Introduction	319
II. A Simplified Model of Molecular-Beam Sampling	322
III. Boundary-Layer Considerations	326

IV. Chemical Relaxations	329
V. Species Condensations	336
VI. Skimmer Interference	338
VII. Mass Separations	342
VIII. Background Scattering	347
IX. Mass-Spectra Interpretations	350
X. Preliminary Applications	354
References	358
Index	365
