	Page
Preface	v
SESSION I – Modeling Continuous Combustion	1
Mathematical Models of Continuous combustion	3
Current kinetic Modeling Techniques for continuous Flow Combustors	23
Some Observations on Flows Described by Coupled Mixing and Kinetics	55
General Discussion	91
Session Summary	106
SESSION II – Pollutant Formation and Destruction Processes	107
Nitric Oxide Formation in Laminar Diffuser Flames	109
Investigation of NO Formation Kinetics in Combustion Processes : The Methane-Oxygen-Nitrogen Reaction	123
Nitric Oxide Formation and Carbon Monoxide Burnout in a compact steam Generator	141
Emissions from Gas Turbine-Type combustors	161
General Discussion	183
Session Summary	185
SESSION III – Effects of Operating Conditions and Fuel Factors	187
Effect of Fuel composition on Particulate Emissions from Gas Turbine Engines	189
Measurement of Nitric Oxide formation within in a Multi-Fueled turbine Combustor	211
Experimental Studies of chemical Processes in a Model Gas Turbine Combustor	243
Effects of Fuel Injection Method on Gas Turbine Combustor	255
Effect of Operating Variables on Pollutant Emissions from Aircraft Turbine Engine combustors	279
General discussion	304
Session Summary	321
SESSION IV – Powerplant Emission	323
Operational Control of the Nitric oxide Emissions from Stationary Boilers	325
Control and Reduction of Aircraft Turbine Engine Exhaust Emissions	345
Emission characteristics of Continuous Combustion systems of Vehicular Powerplants – Gas Turbine, Steam, Stirling	375
General Discussion	451
Session summary	458
SYMPOSIUM SUMMARY	461
Participants	467
Authors and Discussors Index	473
Subject Index	475
