Preface	vii
1. Catalytic Reduction of Oxides of Nitrogen Emissions in Auto Exhaust Gas	1
2. Thermocatalytic Detection of NO_x	14
3. The Relative Resistance of noble Metal Catalysts to Thermal Deactivation	24
4. Variation of Selectivity with Support Chemistry in NO_x Removal Catalysts	32
5. Thermodynamic Interaction between Transition Metals and Simulated Auto Exhaust	39
6. Platinum Catalysts for Exhaust Emission control : The Mechanism of Catalyst Poisoning by Lead and Phosphorous Compounds	54
7. A comparison of Platinum and Base Metal Oxidation Catalysts	72
8. Deposition and Distribution of Lead, Phosphorus, Calcium, Zinc, and Sulfur Poisons on Automobile Exhaust NO_x Catalysts	85
9. The Chemistry of Degradation in Automotive Emission Control Catalysts	103
10. The Optimum Distribution of Catalytic Material on Support Layers in Automotive Catalysis	116
11. Oxidative Automotive Emission Control Catalysts – Selected Factors Affecting Catalyst Activity	133
12. Thermally Stable Carriers	147
13. Spinel Solid Solution Catalyst for Automotive Applications	161
14. Oxidation of CO and C_2H_4 by Base Metal Catalysts Prepared on Honeycomb Supports	178
Index	193
