Preface	ix
1. Introduction	1
1.1 Automatic Control	1
1.2 Optimization of Systems	3
1.3 Continuous and Discrete Systems	5
1.4 Notational Convention	6
2. Review of Probability and Statistical Inference	8
2.1 Introduction	8
2.2 Random Variables and Their Properties	9
2.3 Distribution of More Than one Random Variable	18
2.4 Distributions of Functions of Random Variables	29
2.5 The Normal Distribution	33
2.6 Limit Theorems	35
2.7 Statistical Inference :Estimation	36
2.8 Subjective Versus Objective Probability	42
References	43
Developmental Exercises	44
Problems	44
3. Random Processes	55
3.1 The Random Process	55
3.2 Characterization of a Random Process	56
3.3 Properties of Random Processes	64
3.4 The Normal Random Process	70
3.5 The Random Sequence	73
3.6 The Markov Property of Random Processes and White Noise	74
3.7 The Vector-Valued Random Process	81
References	84
Developmental Exercises	84
Problems	85
4. Basic Tenets of System Theory	90
4.1 The Mathematical Model Equations	90
4.2 The Linear System	93
4.3 Properties of Systems	100
4.4 Uncertainties in Linear Systems	114
4.5 The Nonlinear System	124
References	130
Developmental Exercises	130
Problems	132
5. Modal Control of Linear Dynamic Systems	148
5.1 State Space Approach to Linear Systems Control	148
5.2 Linear Observers	187
5.3 Discrete Time Systems	225
5.4 Input-Output Representation	235
5.5 Further Considerations	249
References	252
Developmental Exercises	255
Problems	255

6.	Optimal Control of Dynamic Systems	262
6.1	Application of the Calculus of Variations	262
6.2	Optimization with control variable Constraints	278
6.3	Unconstrained Linear Problems	304
6.4	Discrete Time Systems	325
6.5	Inaccessible State Variables	333
6.6	Some Further Considerations	339
	References	346
	Developmental Exercises	351
	Problems	351
7.	Optimal Estimation and Filtering	365
7.1	Point Estimation	365
7.2	The Filtering Problem	399
7.3	The Smoothing Problem	430
7.4	The Linear Stochastic Control Problem	452
7.5	An Approach to Nonlinear Filtering : The Extended Kalman Filter	463
7.6	Further Considerations	471
	References	477
	Developmental Exercises	481
	Problems	482
8.	Dynamic Programming as a System Optimization Technique	497
8.1	Dynamic Programming	497
8.2	The General Problem	498
8.3	Discrete State Problems	503
8.4	Dynamic Programming Approach to Optimal Control	519
8.5	Further Comments	536
	References	537
	Problems	539
Appendix A	Matrix Operations	543
Appendix B	Optimization	563
Appendix C	The Solution of linear Equations	607
Appendix D	A Comparison of Modern and Classical Control Theory	618
Index		641
