Preface	xiii
List of Symbols	xv
<b>Part I FUNDAMENTAL CONCEPTS IN MANUFACTURING AND AUTOMATION</b>	<b>1</b>
1. Introduction	1
1.1 Automation Defined	3
1.2 Reasons for Automating	5
1.3 Arguments For and Against Automation	7
1.4 Organization of this Book	9
References	10
2. Production Operation and Automation Strategies	12
2.1 What Is Production?	12
2.2 Basic Industries	13
2.3 Organization in Manufacturing Firms	15
2.4 Production Plants	21
2.5 Production Operations	26
2.6 General Models of Production Operations	27
2.7 Automation Strategies	34
References	38
Problems	38
3. Economic Analysis in Production	40
3.1 Introduction	40
3.2 Fundamentals of Investment Analysis	41
3.3 Costs in Manufacturing	47
3.4 Break-even Analysis	51
References	55
Problems	55
Appendix : Tables of Interest Factors	57
<b>Part II HIGH VOLUME DISCRETE PARTS PRODUCTION SYSTEMS</b>	<b>63</b>
4. Detroit Type Automation	65
4.1 Introduction	65
4.2 Physical Configuration of the Equipment	67
4.3 Methods of Workpart Transport	69
4.4 Transfer Mechanisms	71
4.5 Optional Features at Additional Cost	76
4.6 Automation for Machining Operations	80
4.7 Automatic Assembly	84
4.8 Design and Fabrication Considerations	88
References	91
Problems	92
5. Analysis of Automated Flow Lines	93
5.1 Introduction	93
5.2 General Terminology and Analysis	94
5.3 Analysis of Transfer Lines without Storage	98
5.4 Analysis of Assembly Machines without Storage	103
5.5 Partial Automation	112

5.6	Automated Flow Lines with Internal Parts Storage	115
5.7	Computer Simulation of Automated Flow Lines	125
	References	126
	Problems	127
6.	Flow Line Balancing	131
6.1	Introduction	131
6.2	The Line Balancing Problem	134
6.3	Manual Methods of line Balancing	140
6.4	Computerized Line Balancing Methods	148
6.5	Other Ways to Improve the Line Balance	152
6.6	A Guide to the Literature	155
	References	156
	Problems	157
Part III	NUMERICAL CONTROL MANUFACTURING SYSTEMS	161
7.	Numerical control	163
7.1	Introduction	163
7.2	What is Numerical Control?	164
7.3	Coordinate System and Machine Motions	170
7.4	Types of NC System	173
7.5	Applications of Numerical Control	176
7.6	The Economics of Numerical Control	180
	References	185
8.	NC Part Programming	186
8.1	The Part Programming Process	186
8.2	Punched Tape and Tape Format	187
8.3	Manual Part Programming	196
8.4	Computer-Assisted Part Programming	201
8.5	The APT Language	206
	References	219
	Problems	219
	Appendix : APT Word Definition	223
9.	Extensions of Numerical Control	233
9.1	Introduction	233
9.2	Direct Numerical Control (DNC)	234
9.3	Computer Numerical Control (CNC)	239
9.4	Adaptive control Machining	240
9.5	Industrial Robots	247
9.6	Current Trends in NC	253
	References	254
	Problems	255
Part IV	COMPUTER-AIDED MANUFACTURING	259
10.	Fundamentals of CAD / CAM	261
10.1	Introduction	261
10.2	Computer – Aided Design	262
10.3	Computer – Aided Manufacturing	270
	References	279
11.	Computers in Manufacturing	281
11.1	The Computer and Its Peripheral Equipment	281
11.2	Computer Sizes	289
11.3	Computer Programming Languages	293
11.4	The Computer Process Interface	296
11.5	Interface Hardware	302
11.6	Programming for Computer Control	318

11.7	Hierarchy of Computers in CAM	324
	References	328
	Problems	329
12.	Computer Process Monitoring	331
12.1	Introduction	331
12.2	Types of Production Monitoring Systems	333
12.3	Information Provided by Monitoring	337
	References	345
13.	Process Control Fundamentals – Modeling and Analysis	346
13.1	Introduction	346
13.2	Process Model Formulation	347
13.3	Transfer Functions and Block Diagrams	357
13.4	Laplace Transforms	370
13.5	Control Actions	377
13.6	Linear Systems Analysis	383
13.7	The Root-Locus Method	389
13.8	System Design	396
	References	405
	Problems	406
14.	Direct Digital Control	414
14.1	Introduction	414
14.2	Analog control	415
14.3	Direct Digital control	417
14.4	Advantages and Disadvantages of DDC	422
	References	423
	Problems	424
15.	Supervisory Computer Control	425
15.1	Introduction	425
15.2	Control Strategies in Supervisory Computer Control	430
15.3	Steady-State Optimal control	434
15.4	Adaptive control	442
15.5	On-Line Search Strategies	463
	References	476
	Problems	477
Part V	SYSTEMS FOR MANUFACTURING SUPPORT	485
16.	Production systems at the Operations Level	487
16.1	Overview	487
16.2	Computer Generated Time Standards	488
16.3	Machinability Data Systems	494
16.4	Cutting Conditions Optimization	501
	References	505
	Problems	506
17.	Production Systems at the Plant Level	508
17.1	Production Planning and Control	508
17.2	Material Requirements Planning (MRP)	511
17.3	Capacity Planning	521
17.4	Shop Floor Control	527
	References	531
	Problems	532
Part VI	GROUP TECHNOLOGY AND INTEGRATED MANUFACTURNNG SYSTEMS	535
18.	Group Technology	537
18.1	Introduction	537

18.2	Part Families	539
18.3	Parts Classification and Coding	542
18.4	Production Flow Analysis	551
18.5	Machine Cell Design	554
18.6	Benefits of Group Technology	557
18.7	Automated Process Planning	559
	References	562
	Problems	563
19.	Flexible Manufacturing Systems	564
19.1	Introduction	564
19.2	Problems Solved by an FMS	565
19.3	System components	568
19.4	Application Examples	577
19.5	The Automated Factory	579
	References	582
	Answers to Selected Problems	583
	Index	589
