FIRST SESSION	
INTRODUCTION	3
A Review of Measurement Requirements	5
Discussion	12
The On-Line Analysis of Process Streams	15
Discussion	26
Defining the Properties Requiring Measurement	29
Discussion	37
An Examination of the Theoretical and Practical Philosophies of Flow Measurement	39
Discussion	55
Some Aspects of Precise Liquid Bulk Measurement in Oil Refinery Operations	58
Discussion	70
SECOND SESSION	
A Survey of the Problems that Confront the Automatic Control Design Engineer	79
Discussion	90
Application of Automatic control in the Chemical and the Oil Industry	93
A Review of some New Techniques in Automatic Control	103
Duscussion on the two preceding papers	111
Optimisation of a petrochemical Synthesis Using a Process Control Computer	114
Discussion	123
Reliability Performance of an On-Line Digital Computer when Controlling a plant without the Use of conventional Controllers	125
Discussion	136
THIRD SESSION	
Control Engineering and Plant Design	143
Discussion	150
The Automation of batch-Production Chemical Plants	153
Discussion	160
The Economic Justification of Instrumentation	164
Discussion	181
Integrated System Engineering : a High Speed, Wide-Range pH Control System	186
Discussion	195
Summary of Paper and Discussion in Session III	197
FOURTH SESSION	
Specific Objectives in the control Field	203
Discussion	207
Chairman's Summary	219
Recommendations adopted by the Conference	219
