

CONTENTS

Foreword	(vii)
Preface to the Second Edition	(ix)
Preface to the First Edition	(xi)

GENETICS

1. Mendel's Experiments and Principles of Inheritance	3
2. Multiple Allelism: Multiple Alleles	12
3. Multiple Factor Hypothesis	16
4. Linkage and Recombination	22
5. Sex Chromosome in Man, <i>Drosophila</i> and <i>Melandrium</i>	28
6. Maternal Influence on Inheritance	37
7. Alterations in Genetic Make Up—Changes at Genetic Level	44
8. Alterations in Genetic Make Up—Changes in Chromosome Structure	53
9. Alterations in Genetic Make Up—Changes in Chromosome Number	61
10. Types of Plant Reproduction: Vegetative, Apomixis and Sexual	66
11. Methods of Plant Improvement: Pure Line and Mass Selection	74
12. Mutations as Method of Plant Improvement	84
13. Laboratory Exercises	89
Suggested Readings	105

PLANT BREEDING

1. Plant Type Concept	3
2. Genotype X Environment Interaction and Stability Nature	11
3. Response of Genotypes to Different Stress Conditions	18
4. Stresses Due to Drought, Cold Salinity and Alkalinity	27
5. Development of Resistant Varieties to Drought	34
6. Plant Genetic Resources	41

7. Utilization of Wild Species in Crop Improvement	69
8. Interspecific Crosses	85
9. Genome Analysis and Evolution of Polyploid Crops	96
10. Cytoplasmic-Genic Male Sterility Systems in Hybrid Seed Production	112
11. Somaclonal Variation in Crop Improvement	131
12. Anther Culture and its Role in Crop Improvement	150
13. Asexual Propagation of Relevance to Mutation Breeding	170
14. Mutation Breeding for Root and Tuber Crops	176
15. Genetic Manipulation and Gene Transfers in Plants and Animals	182
16. Protoplast Fusion and Somatic Hybridization	208
17. Nucleic Acid Hybridization	222
18. RFLP in Plant Breeding	231
Glossary	247
Subject Index	266
Species Index	269
