Section 1. Introduction	
1. Perspectives in Postharvest Physiology	1
Section 2. Biochemical Control	
2. Synthetic and Degradative Processes in Fruit Ripening	5
3. Role of Auxin in the Regulation of Fruit Ripening	19
4. Preharvest Nutrition and Postharvest Physiology of Apples	35
Section 3. Quality Indices	
5. Anatomy of Toughness in Plant Tissues	43
6. Ultrastructure of Polysaccharides in Relation to texture	55
7. Anthocyanin Pigments in Foods	62
8. Quality Evaluation of Fruits and Vegetables by Spectrophotometric Technique	73
Section 4. Handling and Storage	
9. Postharvest Diseases of Fresh Fruits and Vegetables – Etiology and Control	81
10. Irradiation Treatment of Fruits and Vegetables	118
11. Controlled atmospheres for Fresh vegetables and Fruits – Why and When	130
12. Storage Stability and quality of Produce Packaged in Polymeric Films	144
13. Subatmospheric Storage of Fruits and Vegetables	153
14. Hypobaric Storage and Transportation of Fresh Fruits and Vegetables	172
Index	189
