

# Contents of Volume 1

Preface	xli
List of contributors	xliii
Introduction	i
<i>James N. Seiber</i>	
Introduction	1
Relationship of pesticide residue analysis, regulation, and risk assessment	4
Who does residue analysis and why	5
Challenges	7
References	8
<b>Regulatory guidance and scientific consideration for residue analytical method development and validation</b>	
Assessment of residue analytical methods for crops, food, feed, and environmental samples: the approach of the European Union	13
<i>Johannes Siebers and Ralf Hänel</i>	
Introduction	13
Legal background	14
General	14
Council Directive 91/414/EEC	14
Legislation related to MRLs	15
Legislation related to residues limits for soil, water, and air	18
Provisions for residue analytical methods	18
Evaluation of the submitted methods	20
Institutional background	20
Validation parameters	21
Requirements for post-registration and monitoring (enforcement) methods	23
General requirements	23
Specific requirements	27
Requirements for data generation methods	31
General requirements	32
Specific requirements	33
Availability of analytical methods	34
Perspectives	35
Acknowledgement	36
References	36

Regulatory considerations for residue analysis and methods on crops and food: the approach of Japan	38
<i>Kazuo Ogura, Hisayoshi Yamagishi and Shigeji Sugimoto</i>	
Background	38
Plant metabolism studies	40
Residue studies on crops	41
Residue analytical method	41
Preferred methodology for conducting supervised field trials	41
Field data (field report) presentation	46
Extrapolation among the formulation types	47
Residue definition	47
Market basket survey in Japan	48
Conclusion	49
Further reading	49
General approaches for residue analytical method development and validation	50
<i>Thomas J. Class and Reiner Bacher</i>	
Introduction	50
Approaches to analytical method development	51
Properties of the analyte(s)	51
Functional groups of the analyte(s)	52
Properties of the sample material	53
Availability and practicality of analytical instrumentation	54
Consideration of time, throughput, ruggedness and quality	54
Practical examples	55
Extending the scope of the multi-residue method DFG S19	55
What can go wrong?	57
Beyond the limits	58
References	58
Best practices in establishing detection and quantification limits for pesticide residues in foods	59
<i>Johannes Corley</i>	
Introduction	59
Definitions	61
Methods for defining LOD and LOQ	63
IUPAC method	63
Propagation of errors method	66
Hubaux-Vos approach	67
Two-step approach (proposed by the US EPA)	67
RMSE method	68
The $t_{99.5LLMV}$ method	70
Confirmation	71
Representative data	72
Conclusions	73
Acknowledgements	74
References	74

The process of development and validation of animal drug residue methods for  
US Food and Drug Administration regulatory use

*Philip James Kijak and Valerie B. Reeves*

Introduction	76
The method	78
Determinative procedures	79
Confirmatory procedures	79
Development of methods for regulatory use	80
Practicability of methods	80
Analyte selection	80
Specificity	81
Ruggedness	81
Stability	82
System suitability	82
Method criteria	83
Standards	83
Precision	83
Accuracy	84
Other considerations	84
Confirmatory procedure criteria	85
Standard operating procedures (SOPs)	85
Determinative procedure	85
Confirmatory procedure	87
Other considerations	87
The method trial	88
Second analyst/laboratory check	88
FDA review	88
Inter-laboratory method trial	89
Confirmatory procedure method trial	91
Non-NADA method trial	91
Evaluation of data and recommendation for use	92
Conclusion	92
References	93

Validation of analytical methods for post-registration control and monitoring  
purposes in the European Union

*Lutz Alder*

Introduction	94
Evaluation of enforcement methods for food provided by manufacturers	95
The need for enforcement methods from the applicant	95
The problem with residue definition	96
Elements and format of method description	98
Assessment of validation results	101
Matrices in validation experiments	105
Test of multi-residue methods	107
Independent laboratory validation	108
Statement on extraction efficiency	108
Perspectives	109

Validation of European standard (CEN) methods	110
Scope and format of CEN methods	110
CEN requirements for widely accepted multi-matrix/multi-residue methods	112
Requirements for (newer) methods with limited scope	112
Assessment and documentation of validation results	113
Validation of official methods of EU member states	115
Overview of existing method collections and validation requirements	115
Single-laboratory validation in the UK	115
Validation procedures of the Nordic countries	119
Validation of official methods in Germany	124
The problem of appropriate documentation of validation data of multi-matrix/multi-residue methods	127
Summary and conclusion	128
References	130

## Best practices in the generation and analysis of residues in crop, food and feed

Conducting crop residue field trials in the USA	135
<i>William W. John</i>	
Introduction	135
Description of the different types of field crop residue studies	137
EPA guidelines and requirements	137
Planning phase	140
Testing strategy	140
Crop and crop grouping	141
Site/location selection	143
Good Agricultural Practice (GAP) and use patterns	144
Test substance	145
Residue decline trials	145
Processing study requirement	146
Contract research organizations	147
Best practices in conducting field study	148
Protocol development	148
The test site	149
Test material	153
Application phase	155
Sampling phase	157
Sample storage and shipping	159
Sample preparation	162
Field QA components	163
Data presentation and communication	165
Summary	167
References	167

Conducting crop residue field trials in Europe	169
<i>Jeff Old</i>	
Introduction	169
General issues and considerations in conducting residue studies in Europe	169
Regulation guidelines	169
European comparable climatic zones/weather influences	170
Crop and grouping	170
Study planning phase	173
Study objectives	173
Role and responsibility of study personnel	173
Preparing the study plan	176
Product use pattern	177
Test site requirements, evaluation and selection	177
Best practices to conduct field studies	178
Evaluation and selection of field investigators and testing personnel	178
Preparation of field testing study plan	179
Test item (previously termed test substance)	179
Trial layout	180
Growing and maintenance of trial site crops	181
Calibration/servicing of application equipment	181
Test item application	182
Sampling of crops	184
Sample shipping and transportation	188
Sample storage	189
Record keeping	191
Good Laboratory Practice	193
Field QA audits and study involvement	194
Archiving	195
Conclusion	196
Further reading	197
Conducting crop residue field trials in Mexico and Latin America	198
<i>Louis Russo</i>	
Introduction	198
Regulatory requirements	199
Planning a field residue trial in Latin America	201
Number and locations of trials	201
Personnel requirements	202
Protocol preparation	203
Test materials	203
Quality assurance	204
Budget considerations	204
Communications	206
Pre-implementation activities	206
Translation of critical documents	206
Preparation of the field notebook formats	207
Pre-meetings in testing regions	207
Implementation of testing procedures	210
GLP training and protocol discussion	210
Safety training	211

First application	211
Sampling and shipping	212
Food Quality Protection Act (FQPA) considerations	213
Reporting and closure	213
Abbreviations	213
Food processing of raw agricultural commodities for residue analysis	215
<i>William J. Englar, Neal Ewing, John C. Peterson and Cheryl M. Englar-Coulter</i>	
Overview of processing of agricultural commodities	215
Historical background	215
Basis for selecting a process method	216
Laboratory/pilot processing of agricultural commodities	218
Processing requirements of individual agricultural commodities	218
Pilot laboratory processing versus commercial processing	219
Effect of processing on pesticide residues	223
Good Laboratory Practice (GLP) regulations and their impact on the small-scale processing procedures	224
Development and validation of SOPs	224
Development of processing protocol	224
Role of study personnel	226
Protocol deviations	227
Organization of a processing report	227
Raw data notebook	227
Summary report of processing procedures	228
Summary	230
References	230
Best practices in the implementation of a large-scale market basket residue survey study	231
<i>David J. Brookman, Kay K. Curry and Beth M. Polakoff</i>	
Introduction	231
General considerations	231
Case study (Organophosphates Market Basket Survey)	232
Development of study protocol	233
Definition of study objectives	234
Role and responsibilities of study personnel	235
Selection of products and of properties to be evaluated	236
Sample collection strategy	237
Analyses and data reporting	238
Implementation of sampling plan	239
Shopper selection and training	239
Sample collection, storage, shipment, receipt, and documentation	240
Analytical phase	241
Analytical method	241
Obtaining control commodities	242
Assignment of products to laboratories	242
Standardization of results reporting	243
Presentation and review of study findings	245

Quality assurance functions	246
Interpretation of study findings	247
<b>Procedures and best practices for conducting residue studies of animal health drugs in food animals</b>	<b>248</b>
<i>David J. Smith, Guy R. Stehly and Michael P. Turberg</i>	
Introduction	248
Purpose of residue studies	249
Studies sponsored by the animal health industry	249
Other studies	257
Protocol development	259
Animal selection and animal receipt	261
Animal considerations for GLP studies	262
Other considerations in animal selection	264
Preparation of test article	265
Animal dosing	267
Oral administration	268
Parenteral administration	271
Other methods of drug administration	272
In-life sample collection	274
Facility considerations	274
Animal weights, feed and water intakes, and dose	275
Nutritional and environmental considerations	276
Sample collection	276
Residue analysis	281
Radiochemical analysis	281
Analysis of the marker residue	283
Quality control	291
Report	292
Conclusions	292
References	293
<b>Sampling and analyses of foodstuffs from animal origin</b>	<b>300</b>
<i>Robin S. Readnour, Thomas J. Burnett, Douglas E. Kiehl and Lisa D. Spurlock-Brouwer</i>	
Introduction	300
Sample collection and storage	302
Sampling and homogenization	302
Stability	303
Extraction and sample preparation	304
Extraction	304
Sample preparation	307
Separation and detection	310
Liquid chromatography	311
Liquid chromatography/mass spectrometry	314
Gas chromatography	315
Immunoassay	317
Data handling and presentation	318
Method validation	319

Regulatory guidelines	319
Inter-laboratory/collaborative studies	321
Conclusion	321
References	321

## Compound class

Anilides	327
<i>Hiroko Kobayashi</i>	
Introduction	327
Residue analytical methods for plant materials	327
Nature of the residue	327
Analytical method	329
Residue analytical methods for soil	336
Nature of the residues	336
Analytical method	336
Analytical methodology for water	339
Nature of the residues	339
Analytical method	339
References	342
Chloroacetanilide herbicides	344
<i>Amy Hackett, John Fuhrman and Chantel Van Bellinghan</i>	
Introduction	344
Analytical methodology for plant and animal products	347
Nature of the residue	347
Rationale for the presented methods	347
Description of methodology	347
Analytical methodology for water and soil	348
Nature of the residue	348
Rationale for the methods presented	349
Description of methodology	350
Analytical method for the determination of acetochlor and its metabolites in plants and animals	350
Outline of method	351
Apparatus	351
Reagents	352
Analytical standards	354
Analytical procedure	355
Instrumentation	359
Calculation of residues	359
Evaluation	360
Analytical method for the determination of propachlor and its metabolites in plants and animals	361
Outline of method	361
Apparatus	361
Reagents	362
Analytical standards	363
Analytical procedure	363
Instrumentation	366

Calculation of residues	367
Evaluation	367
Multi-residue analytical method for the determination of acetochlor, alachlor, and metolachlor in aqueous samples	368
Outline of method	369
Apparatus	369
Reagents	370
Analytical standards	371
Analytical procedure	373
Calculation of residues	376
Evaluation	377
Multi-residue analytical method for the determination of acetochlor, alachlor, and metolachlor soil metabolites in aqueous samples	378
Outline of method	380
Apparatus	380
Reagents	381
Analytical standards	381
Analytical procedures	382
Calculation of residues	385
Evaluation	385
Future directions for environmental monitoring	387
Acknowledgements	387
References	387
 Dinitroaniline herbicides	 389
<i>Masako Ueji</i>	
Introduction	389
Analytical methodology for plant materials	390
Nature of the residues	390
Method principle	391
Analytical methodology for soil	395
Nature of the residues	395
Method principle	395
Analytical method for soil metabolites	397
Analytical methodology for water	398
Nature of the residues	398
Analytical method	398
References	399
 Sulfonylurea herbicides	 400
<i>Charles R. Powley</i>	
Introduction	400
Analytical methodology	402
LC/MS/MS analysis	402
Crops, food and feed	405
Soil	407
Water	408
Conclusions and future directions	409
Acknowledgements	410
References	410

Triazine herbicide methodology	412
<i>Robert A. Yokley</i>	
Introduction/general description	412
Analytical methodology for water samples	416
Water sample preparation	416
Analytical methodology for soil samples	429
Liquid–solid extraction	430
Sonication	431
Microwave extraction	432
Supercritical fluid extraction	432
Subcritical fluid extraction	434
On-line SFE	435
Analytical methodology for crops, food, feed, and animal tissues	435
Analytical methodology for biological fluids	437
Analytical methodology for air samples	438
Instrumentation	439
Gas chromatography	439
Liquid chromatography	441
Supercritical fluid chromatography	442
Electrochemical analysis	443
Other techniques	443
Future directions	443
References	445
Diphenyl ethers	451
<i>Masako Ueji</i>	
Introduction	451
Analytical methodology for plant materials	453
Nature of the residues	453
Analytical method	453
Analytical methodology for soil	458
Nature of the residues	458
Analytical method	459
Analytical method for the metabolites of diphenyl ether herbicides in soil	460
Analytical methodology for water	461
Nature of the residues	461
Analytical method	462
References	464
<b>Individual compounds</b>	
Bispyribac-sodium	469
<i>Yoshihiro Saito, Mitsumasa Ikeda and Akira Yagi</i>	
Introduction	469
Outline of method	469
Apparatus	470
Reagents	470
Sampling and sample preparation	471

Procedure	471
Extraction	471
Cleanup	472
Gas-chromatographic determination	473
Evaluation	473
Method	473
Recoveries, limit of detection and limit of determination	473
Calculation of residues	474
Important points	474
Carfentrazone-ethyl	475
<i>Audrey Chen</i>	
Introduction	475
Outline of method	476
Apparatus	477
Reagents	479
Sampling and preparation	479
Analytical procedures for nonoil crop matrices	480
Sample extraction, filtration and concentration	480
Partition	480
Determination of carfentrazone-ethyl	480
Determination of acid metabolites	481
Analytical procedures for crop refined oils	482
Analytical procedures for animal matrices	483
Instrumentation	483
Method validation and quality control	484
Experimental design	484
Preparation of standards	484
Calculation	485
Time required for analysis	486
Accuracy and precision	486
Important points	486
Storage stability	488
Acknowledgements	488
Flucarbazone-sodium	489
<i>Thomas J. Gould and Chung K. Lam</i>	
Introduction	489
Outline of method	490
Apparatus	490
Reagents and consumable supplies	491
Sampling and preparation	491
Procedure	491
Extraction	491
Cleanup/concentration	492
Chromatographic determination	493
Evaluation	494
Method	494
Recoveries, limit of detection and limit of quantitation	495
Calculation of residues	496

Important points	497
References	497
Flumetralin	498
<i>Robert A. Yokley</i>	
Introduction	498
Outline of methods	498
Apparatus	499
Reagents	499
Sample preparation	499
Soil	499
Plant materials	500
Instrumentation	500
Evaluation	501
Method	501
Recoveries, limit of detection (LOD) and limit of quantitation (LOQ)	501
Calculation of residues	501
Reference	501
Flumioxazin	502
<i>Thomas Schreier</i>	
Introduction	502
Outline of method	503
Plant matrices	503
Soil	503
Water	503
Apparatus	503
Reagents	503
Sampling and preparation	504
Procedure	504
Extraction	504
Cleanup	505
Determination	506
Evaluation	507
Method	507
Recoveries, limit of detection and limit of quantitation	507
Calculation of residues	507
Important points	508
Isoxaflutole	509
<i>Robert J. Seymour, Craig A. Smitley and Sabrina X. Zhao</i>	
Introduction	509
Outline of method	510
Reagents and standards	510
Equipment and supplies	510
Sampling and preparation	511
Extraction procedure	511
Manual procedure	511

Automated procedure using a Zymark Benchmate Workstation with EasyFill module	512
Determination by LC/MS/MS	514
Evaluation	515
Performance criteria	515
Recoveries, limit of detection and limit of quantification	515
Calculation	515
<b>Orbencarb</b>	<b>519</b>
<i>Mitsumasa Ikeda, Yoshihiro Saito and Akira Yagi</i>	
Introduction	519
Outline of method	519
Equipment	520
Reagents	520
Sample preparation	521
Procedure	521
Extraction	521
Cleanup	522
Gas-chromatographic determination	523
Evaluation	524
Method	524
Recoveries and limits of detection	524
Calculation of residues	524
Important points	524
Liquid-liquid partition	524
Cleanup	525
Evaporation	525
Detection	525
Determination of Metabolite II in soil	525
Reference	525
Further reading	525
<b>Prodiamine</b>	<b>526</b>
<i>Robert A. Yokley</i>	
Introduction	526
Outline of method	527
Apparatus	527
Reagents	527
Sample preparation	528
Air	528
Soil	528
Water	528
Instrumentation	529
Evaluation	530
Method	530
Recoveries, limit of detection (LOD) and limit of quantitation (LOQ)	530
Calculation of residues	530
Important point	531

Prohexadione-calcium	532
<i>Akira Yagi, Mitumasa Ikeda and Yoshihiro Saito</i>	
Introduction	532
Outline of method	532
Apparatus	533
Reagents	533
Sampling and sample preparation	534
Procedure	534
Extraction	534
Ion-exchange column chromatography	535
Methylation	536
Reversed-phased silica gel column chromatography cleanup	536
High-performance liquid chromatographic determination	536
Evaluation	537
Method	537
Recoveries and limits of detection	537
Calculation of residues	537
Important points	538
References	538
Pyraflufen-ethyl	540
<i>Yuji Ikemoto</i>	
Introduction	540
Outline of method	541
Multi-residue analytical method	542
Apparatus	542
Reagents and supplies	543
Procedure	543
Total toxic residue analytical method	547
Apparatus	547
Reagents and supplies	547
Procedure	547
Evaluation	549
Important points	550
References	550
Pyriminobac-methyl	551
<i>Akira Yagi, Mitumasa Ikeda and Yoshihiro Saito</i>	
Introduction	551
Outline of method	551
Apparatus	552
Reagents	552
Sampling and sample preparation	552
Procedure	553
Extraction	553
Liquid-liquid partition (rice grain, rice straw and soil)	553
Cleanup	553
Gas-chromatographic determination	554

Evaluation	555
Method	555
Recoveries and limit of detection	555
Calculation of residues	555
Important points	555
Method for extraction of pyriminobac-methyl from soil	555
Extraction of pyriminobac-methyl from rice grain and rice straw	556
Cleanup	556
GC column	556
Sample storage stability	556
References	557
Pyriithiobac-sodium	558
<i>Yoshihiro Saito, Mitsumasa Ikeda and Akira Yagi</i>	
Introduction	558
Outline of method	558
Apparatus	559
Reagents	559
Sampling and sample preparation	560
Procedure	560
Extraction	560
Cleanup	560
Gas-chromatographic determination	561
Evaluation	562
Method	562
Recoveries, limit of detection and limit of determination	562
Calculation of residues	562
Important points	563
Reference	563
Sulfentrazone	564
<i>Andrey Chen</i>	
Introduction	564
Method description	566
Method development history	566
Outline of method	566
Apparatus	566
Reagents	568
Sampling and preparation	568
Analytical procedures for nonoil crop matrices	569
Sample extraction, filtration and concentration	569
Second reflux ( <i>conversion of SCA to DMS and release of conjugated HMS</i> )	
and filtration	569
C <sub>8</sub> SPE cartridge	569
C <sub>8</sub> SPE cartridge/first silica gel SPE cartridge	570
Derivatization ( <i>silylation of 3-hydroxymethyl sulfentrazone</i> )	570
Second (post-derivatization) silica gel SPE cartridge	570
Analytical procedures for oily crop matrices	571

Analytical procedures for crop refined oils	571
Instrumentation	571
Method validation and quality control	573
Experimental design	573
Preparation of standards	573
Calculation	573
Time required for analysis	575
Accuracy and precision	575
Important points	575
Storage stability	576

## Contents of Volume 2

Preface	xli
List of contributors	xliii
<b>Recent advances in analytical technology, immunoassay and other nonchromatographic methods</b>	
Regulatory considerations for environmental analytical methods for environmental fate and water quality impact assessments of agrochemicals <i>Michael R. Barrett and Elizabeth Behl</i>	603
Introduction	603
Regulatory perspectives	603
Scientific perspectives	604
Risk assessment perspective	605
Acceptance criteria of environmental analytical methods for pesticide regulation	606
Method submission and evaluation criteria	606
Validation and availability of methods and standards	608
Specific method development issues	609
Identification of unknowns/selection of analyte(s)	609
Detection limits/reporting limits	610
Extraction efficiency/mass balance	612
Matrix effects	613
Specific environmental sample analysis issues	614
Identification of target population in monitoring programs	614
Sample collection strategy: study design	615
Effect of inert ingredients	617
Field quality control issues	618
Conclusions: regulatory context	619
References	620
Immunoassay, biosensors and other nonchromatographic methods <i>Guomin Shan, Cynthia Lipton, Shirley J. Gee and Bruce D. Hammock</i>	623
Introduction	623
Immunoassay for pesticides	623
Principles of immunoassays	624
Immunoassay formats	625
Data reduction	628
Sample collection and preparation	629
Development of pesticide immunoassays	631
Applications	648
PCR for products of agricultural biotechnology	653
Basic principles of agricultural biotechnology	654

Basic principles of the PCR	659
Basic principles of real-time PCR	665
Applications of PCR to agricultural biotechnology	668
Recent advances in nucleic acid amplification and detection	669
Biosensors: immunosensors	669
Biological transducers	670
Conclusion	671
Abbreviations	671
Acknowledgements	673
References	673
Immunologically based assays for pesticide/veterinary medicine residues in animal products	680
<i>Weilin L. Shelver and David J. Smith</i>	
Introduction	680
Immunoassays and animal production agriculture	680
Considerations involved in immunoassay development	681
Immunoassay format	681
End user	683
Assay interferences	683
Detection levels (sensitivity)	688
Target tissues	691
Assay validation using incurred or fortified tissues	691
General sample treatments for eggs, milk, and meat	692
Eggs	692
Milk	693
Tissues	693
Food-animal immunoassay applications	694
Agrochemical residue immunoassay applications	695
Detection of veterinary medicine residues	698
Other therapeutic agents	707
Other antibody-based technologies	708
Conclusion	709
Abbreviations	709
Acknowledgements	709
References	710
Validated immunoassay methods	714
<i>James F. Brady</i>	
Introduction	714
Enzyme immunoassays	714
Choice of tube or plate format	716
Calculation of residues	718
Comparison with chromatography-based methods	718
Requirements for validating a residue method	721
Examples of validated immunoassay methods	723
Conclusion	725
References	725

Advances in methods for pesticide residues in food 727  
*Michael F. Wilson, Stewart L. Reynolds and Richard J. Fussell*

Introduction	727
Sample processing considerations	728
Extraction procedures	729
Cleanup procedures	734
Instrumental techniques for detecting, identifying and quantifying pesticide residues in food	737
GC	737
LC	742
Electrophoretic techniques	743
Immunochemical and biosensor techniques	746
