Preface	ix
<b>CHEMISTRY AND BIOCHEMISTRY OF MICROBIAL-PLANT INTERACTIONS</b>	
1. Microbes and Microbial Products as Herbicides : An Overview	2
2. Maculosin : A Host-Specific Phytotoxin from <i>Alternaria alternata</i> on Spotted Knapweed	53
3. Biochemistry of Non-Host-Selective Phytotoxins	63
4. Satellite Metabolites and Synthetic Derivatives of Abscisic Acid as Potential Microbial Product Herbicides	72
5. Biochemical Responses of Plants to Pathogens	87
6. Phytoalexins and Their Elicitors	114
<b>PATHOGENS WITH POTENTIAL AS BIOHERBICIDES</b>	
7. Pathogens with Potential for Weed Control	132
8. Biological Control of Aquatic Weeds with Plants Pathogens	155
<b>GENETIC ASPECTS OF PATHOGENS FOR WEED CONTROL</b>	
9. Genetic Variability of Fungal Pathogens and Their Weed Hosts	176
10. Biotechnological Approaches to Control of Weeds with Pathogens	184
<b>PHYLLOPLANE-PATHOGEN INTERACTIONS</b>	
11. Interactions of pathogens on Plant Leaf Surfaces	192
12. Functional Significance of Adhesion to the Preparation of the Infection Court by Plant Pathogenic Fungi	218
<b>ASPECTS OF SOIL MICROBES IN WEED CONTROL</b>	
13. Herbicide – Pathogen Interactions and Mycoherbicides as Alternative Strategies for Weed Control	240
14. Synergistic Role of Soil Fungi in the Herbicidal Efficacy of Glyphosate	260
15. Soilborne Fungi for Biological Control of Weeds	276
<b>FORMULATION AND COMMERCIALIZATION OF MICROBES AS BIOHERBICIDES</b>	
16. Formulation and Application Technology for Microbial Weed Control	288
17. Bioherbicide Technology : An Industrial Perspective	305
18. Weed Control with Pathogens : Future Needs and Directions	320
