Figures and Tables	x
I Introduction	3
PART I THE GROWTH CURVE IN ANNUAL PLANTS	
II The Growth Curve	35
III Unit Leaf Rate	46
IV The Leaf Area	51
V Structural Efficiency	54
VI The Flowering Stage	57
VII Correlation Between Seed, Young Plants, and Final Dry Weight	65
VIII Special Forms of Relative Growth – Rate Curves	67
PART II METHODS AND MATERIALS	
IX Introduction	75
X Experiment Room and Material	76
XI Dry-Weight Determination	81
XII Carbon and Nitrogen Methods	83
XIII Minimizing Sampling Errors	86
XIV The “Standard Plant”	88
PART III GENERAL GROWTH FEATURES	
XV Introduction	99
XVI Growth in Length	101
XVII Correlation Between Residual Kernel Weight and the Area of the First Leaf	106
PART IV DRY WEIGHT AND MOISTURE CONTENT OF THE DIFFERENT ORGANS	
XVIII Dry Weight and Moisture Content per Unit leaf area or Unit Stem Length	111
XIX Discussions of Part IV	133
PART V DRY WEIGHT AND MOISTURE OF THE STANDARD PLANT	
XX Introduction	149
XXI The Standard Dry Weight	150
XXII The Calculation of the Structural Distribution of Photosynthates	162
XXIII The Standard Moisture	177
XXIV Conclusions Based on Part II to V	187
XXV Summary of Part II to V	199
PART VI NITROGEN AND CARBON OF THE ORGANS	
XXVI Introduction	205
XXVII Literature Review	206
XXVIII Experimental Results of the Carbon and Nitrogen Analysis	214
XXIX Summary of Part VI	226
PART VII NITROGEN METABOLISM IN RELATION TO GROWTH AND DEVELOPMENT	
XXX Introduction	229
XXXI Nitrogen in Relation to Dry Weight	230
XXXII Total Nitrogen and Total Moisture	244
XXXIII The Nitrogen Balance	252

XXXIV	The Relation between Respiration, Nitrogen Metabolism, and Growth	315
XXXV	Aging in Respect to External Conditions	349
XXXVI	Conclusions and Summary of Part VII	360
	Bibliography	377
	Index	397
