Introduction	I
Thailand corn and sorghum production and export data	II
Map showing location of corn production in Thailand	III
List of cooperation personnel	V
Breeding and genetics for the improvement of yield and quality of corn	
Department of Plant Science, Kasetsart University	1
Yield trials	2
Quality improvement	7
International testing	16
Other cooperative trials	22
Population improvement	33
Special studies	48
Breeding and genetics for the improvement of yield and quality of corn	
Research and Experiment Station – Division, Department of Agriculture	60
Progeny test	60
Varietal and hybrid yield tests	60
Selection method evaluation	62
Breeding and selection for downy mildew resistance	69
Sweet corn Quality Improvement Research and Experiment Station Division, Department of Agriculture	77
Sorghum Improvement Department of Plant Science, Kasetsart University	78
Production of sorghum in Thailand	78
Future of sorghum in Thailand	81
Future need for technology	83
Breeding	83
Yield Testing	85
Introduction testing and selection program	87
Crossing program	93
Pedigree selection scheme	99
Mass selection program	104
Selection within advanced lines	125
Breeding for resistance to the sorghum shoot fly in Thailand	133
Sorghum seed type and color	136
An estimate of field variability in sorghum trials	138
Sorghum harvest technique – plot sampling	146
Minor millets	150
Corn varietal regional yield test Research and Experiment Station Division, Department of Agriculture	152
Management practices for improving yield of two corn varieties Research and Experiment Station Division, Department of Agriculture	154
Management practices for improving yield of two promising early and one standard variety of corn at Chainat in the dry season Research and Experiment Station Division, Department of Agriculture	157
Sorghum varietal regional yield test Research and Experiment Station Division, Department of Agriculture	160
Management practices for improving yield of two sorghum varieties Research and Experiment Station Division, Department of Agriculture	163

Crop production and soil management practices for improving corn yield of corn	Department of Plant Science, Kasetsart University	166
Date of thinning experiment in corn		166
A study of effects of plant population on growth and yield of some corn varieties		166
A comparison of corn yield growth in single and multiple plants hills at different plant		
Populations		168
Weed control experiments		169
Ear competition study in corn		175
Effect of tassel removal and leaf angle on corn yield at various plant densities		181
A study of effect of herbicides and methods of application on grain yield and some agronomic		
characters of corn	Research and Experiment Station Division, Department of Agriculture	185
Soil fertility studies on corn and sorghum		
Division of Agricultural Chemistry, Department of Agriculture		189
Comparison of two corn varieties to different rates of N-P-K applications		189
Study on the suitable sources of phosphatic fertilizer for corn yield		191
Influence of sulfur containing fertilizer and their residuals on the yield of corn in the north		
east		192
A comparative study of two sorghum varieties for response to different levels of fertilizer		193
Effect of plant population and nitrogen fertilization on yield of rained sorghum		195
Soils Studies		
Department of Soils, Kasetsart University		197
Soil fertility		197
Soil physics		206
Survey and characterization of soils in the corn growing area		210
Research in plant pathology		
Department of Plant Pathology and Entomology, Kasetsart University		228
Occurrence of brown stripe downy mildew		228
Regional fungicidal test on downy mildew of corn		228
Preliminary evaluation of some fungicides for control of corn downy mildew		228
Identity of the downy mildew pathogen		232
Field inoculation technique for inoculation corn with downy mildew		232
Reaction of exotic corn materials to downy mildew		233
The effect of Curvularia leaf spot on yield		242
Study on downy mildew of corn and sorghum		
Plant Industry Division Department of Agriculture		244
Survey		244
Screening of corn varieties		244
Yield trial of downy mildew resistant varieties		245
Chemical control of downy mildew		245
Studies on sorghum shootfly control		
Entomology Section Department of Agriculture		249
Testing of new chemicals against shootfly		249
Storage life of Furadan after mixing with sorghum seeds		249
Comparison of water and methocel sticker		250
Testing of attractants on shootfly		251
Entomological research in corn and sorghum		
Department of Plant Pathology and Entomology, Kasetsart University		254
Sorghum Shootfly research		254
Shootfly seasonal history		254
Permanence of resistance to shootfly and mechanisms responsible for resistance		254
Effect of sorghum shootfly population levels on sorghum yield		255
Shootfly alternate hosts		255
Screenhouse experiments with shootfly		259

Conclusions in sorghum shootfly research	260
Corn borer field experiments	263
Screening corn varieties for resistance to corn stemborer under field conditions	263
Determination of stemborer damage index	263
Mass rearing corn stemborer <i>Ostrinia furnacalis</i>	264
Animal Stem nutrition studies	
Animal Science Department, Kasetsart University	269
Beneficial effect of opaque-2 corn in low protein diets on growth of chicks	269
Nutritive value of Thai selection of sorghum in broiler rations	272
Preliminary study on mycotoxin in corn and some applications using mold corn in chick rations	279
Multiple cropping systems which include corn and sorghum in Amphoe Phayuha Khiri, Changwat Nakorn Sawan, Crop year 1970	
Department of Agricultural Economics, Kasetsart University	286
Large scale demonstration at Farm Suwan	
Report on field operations – Aschan Sukthumrong	296
Report on cost and return – Prem Boonrueng and Kampol Adulavidhaya	298
Corn and sorghum seed production	
Research and Experiment Station Division, Department of Agriculture	303
International Training Program	304
IACP Uniform Yield Trial #1-1971	305
IACP yield Trial#2-Amsir Rifin	312
The Relation of Response between a Plant and Its Selfed Progeny to Rust ( <i>Puccinia polysora</i> ) Inoculation	315
Stalk Rot Study	319
Effect of Stalk Rot on yield	325
Corn Topping Experiment	328
Effect of Row Spacing upon Yield of Two Corn Varieties under Weeded and Unweeded Condition	335
Residual Effect of Fertilizer and Line Applied in 1970 on Corn Production in 1971	339
Effect of Rate and Time of Application of Phosphorus and Nitrogen on Corn	341
The Response of Nitrogen and Phosphorus on the Growth of Corn at Farm Suwan	344
Comparison of Responses of Legumes on Previously Atrazine Treated Soil with that of Untreated and Newly Treated Soil	348
Mass Selection for Early Maturity in Thai Composite	351
S <sub>1</sub> Progeny Testing for Low Ear Placement in Puerto Rico	356
Selection for Flintiness in Thai Composite White	358
Downy Mildew Screening on S <sub>2</sub> Lines of Puerto Rico and S <sub>1</sub> Lines of Thai Composite White	360
S <sub>1</sub> Selection for Downy Mildew Resistance in an Effect Leaf Population	363
Selection for Low Ear Placement in Thai Composite	366
Dry Matter Accumulation Study	369
Dry Matter Accumulation in Tropical Flint Corn	371
